The rite of *pūjā* is one of the fundamental rituals found in all of the South Asian religious traditions. These rituals treat deities as honored "guests" who are treated to a variety of offerings in the course of the ritual (Makransky, 1996, 313–314). Variants of the *pūjā* ritual are found in all Buddhist traditions, and this ritual certainly preceded the rise of tantric Buddhism by many centuries.

In the context of tantric rituals, worship is divided into four types:

1. outer worship (Skt. *bāhyapūjā*; Tib. *phyi mchod*);
2. inner worship (Skt. *antarapūjā*; Tib. *nang mchod*);

3. secret worship (Skt. *guhyapūjā*; Tib. *gsang mchod*); and
4. reality worship (Skt. *tattvapūjā*; Tib. *de kho na nyid mchod*).

The first, outer worship, involves offerings of tangible things such as water, food, incense, and so forth (Beyer, 1973, 148–157), while inner worship involves visualized offerings of either the five meats (Skt. *pañcamāṃsa*; Tib. *ro lnga*) or five bodily substances known as the ambrosias (Skt. *pañcāmṛta*; Tib. *bdud rtsi lnga*) to gratify the five senses (Beyer, 1973, 157–159). These pentads represent foul, "impure" offerings that are transformed into ambrosia (Skt. *amṛta*; Tib. *bdud rtsi*) in the "alchemy" of tantric ritual. In the Tibetan traditions, these offerings are visualized and are also depicted in ritual art such as *thangka* paintings and the "offering cakes" (Skt. *bali*; Tib. *gtor ma*), and hence are only symbolically transgressive. One of the purposes of the inner offering is the development of nondual gnosis (Skt. *advayajñāna*; Tib. *gnyis med ye shes*) that is free of any discrimination or discursive thought. The secret worship is a visualized presentation of divine consort goddesses, who represent the sensual pleasures to the deity; the deity unites with them generating great bliss, while "reality worship" is the offering of great bliss itself to the deity (Beyer, 1973, 159–165). It should be noted that only the first type is a ritual conducted in the usual sense of the word, in the external world with actual ritual accoutrements; the remaining three types are visualized. But tantric ritual in general typically involves both an outer "actual" and an inner visualized component.

Most tantric Buddhist rituals involve one or more of these forms of worship, but there are also many rituals that simply involve worship and offering to one or more deities. One of the most important types of rituals involving worship and offerings are fire-sacrifice (Skt. *homa*; Tib. *sbyin sreg*) rituals, in which offerings to a deity are made into a specially consecrated fire. Originally adapted from the ancient vedic Hindu ceremony of the same name, it became a standard tantric ritual; most major tantric traditions preserve some sort of *homa* rituals (Payne & Witzel, forthcoming).

Homa rituals are traditionally classified, by authors such as Buddhaśrījñāna, into three categories, "outer," "inner," and "secret," corresponding to actual outer offerings into the fire, visualized inner offerings, and "secret" visualizations in terms of sexual union. They are also classified in accordance with their objectives into rites designed to pacify (*śāntika*), enrich (*pauṣṭika*), control (*vaśya*), or destroy (*abhicāraka*), to give just a few examples (Gray, forthcoming). These derive from the categories of Indian sorcery, and in accordance with this tradition, different applications have different correspondences that must be implemented in the rituals. Hence rituals for pacification employ white-colored substances (wood, offering substances, etc.) and are conducted during the day at auspicious sites, while rituals for destruction employ black-colored substances and must be conducted during the night at inauspicious locales (Türstig, 1985).

Maṇḍala-Creation Rituals

One of the most important types of rituals performed by tantric masters is the ritual sequence leading to the creation of *maṇḍalas*. *Maṇḍalas* are essential for the rites that ensure the survival of the practice traditions by enabling the initiation of new practitioners. Most major tantric rituals likewise require the creation of the *maṇḍala* to establish the sacred space in which the rituals are conducted. *Maṇḍala* rituals are also very complex, so it is one of the areas in which written guides are indispensible. And as all of the major tantric traditions feature at least one *maṇḍala*, the *maṇḍalavidhi*-type manuals are ubiquitous features of practice-related literature.

These guides typically begin with the process of establishing a consecrated space for the creation of a *maṇḍala*. This typically involves finding the right sort of space, leveling it so it has a suitable surface for making a *maṇḍala* image with colored sand or powder and consecrating it. The consecration rituals may involve anointing the space with auspicious substances such as the "cow products," dairy products and/or urine and dung (Tanemura, 2004, 213–222). It may also involve exorcistic rituals to cast out evil influences and "stake out" a sacred space that they cannot enter. This step typically involves ritual practices closely connected with visualizations, usually involving the visualization of the protective circle as performed in *sādhana* rituals.

This is followed by the much more complicated ritual process of outlining the *maṇḍala* using chalk lines and then filling it in with colored powders (Tanemura, 2004, 237–254). Once the *maṇḍala* is established, it then becomes of the focus of rites of worship and consecration, as R. Kohn (2001) has discussed in depth.

Initiatory Rituals

Once a *maṇḍala* is established, the initiatory rites, or rites of "consecration," can be performed. As the name implies, these rites are adapted from coronation rituals used in medieval India. The earliest *tantras* contain initiation rituals, as do several "proto-tantric" ritual texts that preceded the development of tantric Buddhism circa the 7th century (Davidson, 2011, 71–74). These earlier rites were systematized in the "highest *tantra*" that were composed starting in the 8th century. These works added a sexual dimension to the initiatory rites for these traditions. They took the various initiation rituals developed in the earlier *tantras* and labeled them the "master consecration" (Skt. *ācāryābhiṣeka*; Tib. *bslob dpon dbang*).

They added the three so-called higher consecrations, two of which featured sexual ritual practices (Snellgrove, 2002, 213–277). The second consecration was called the "secret consecration" (Skt. *guhyābhiṣeka*; Tib. *gsang dbang*). It required that the disciple being initiated offer to the master a specially prepared consort, with whom the master would have sex. The mixed sexual fluids produced from this union would then be used to consecrate the disciple.

This is followed by the third consecration, called "the gnosis of the consort" (Skt. *prajñājñānābhiṣeka*; Tib. *shes rab ye shes dbang*), in which the consort is returned to the disciple, and he is instructed in sexual union with her; this was understood as an initiation into the sexual yogic practices of the perfection stage of practice, the most advanced and highly secret level of yogic and meditative practice for these traditions. During or immediately following this union, the disciple would be given advanced instructions concerning the nature of mind and/or reality. This is the fourth consecration, which was likewise considered extremely secret.

This was one of the most controversial developments in tantric ritual. It raised considerable concern in Indian Buddhist circles, and the erotic nature of this ritual (and the *tantras* that describe it) may have led to the censorship of these *tantras* in Tibet during the early transmission period, when translation was conducted with imperial sponsorship and oversight, and also in China, where it was likely subject to oversight and censorship (Davidson, 2011, 75; Gray, 2014). The sexual content of the new initiatory rituals was likewise one of the issues that raised the concerns of Lha bla ma Ye shes 'od in Tibet.

Atiśa wrote about this issue in his *Bodhipathapradīpa* (Light on the Path to Awakening). Atiśa commented that only the laity should take the third and fourth consecrations, since they entail a violation of the monastic vows of celibacy (Sherburne, 2000, 301). This resolved the understandable concern that these practices might lead monks and nuns to break their vows. But it created the uncomfortable consequence of the monastic community – ordinarily the leaders of Buddhist communities – being barred from participation in the "highest" traditions of tantric practice. The masters of these traditions would thus have to be laypeople shifting authority from the monastic to the lay community. Shortly after the composition of these *tantras*, there was an understandable rise in laymen or noncelibate monks serving as tantric masters (*vajrācārya*), but this position was wrested from them by more orthodox monks during the 10th century (Szántó, 2010). The Tibetans, following suit, adapted the initiatory rituals so that the sexual union was only enacted symbolically, allowing celibate monks to maintain their status as spiritual leaders of their communities (Gray, 2007, 127n333).

Given the importance of the rite of initiation, all living tantric traditions practice versions of this rite and have thus produced ritual manuals for its practice. Most *tantras* describe the rite with varying degrees of clarity. A particularly famous text on this rite is the *Sekoddeśa* (Explanation of Consecration), a fragment of the *Ādībuddha* root *tantra* of the Kālacakra tradition. A commentary on this work, the *Sekoddeśaṭīkā*, is attributed to Nāropā, who is probably along with Padmasambhava one of the most famous of the 84 realized adepts, from the Tibetan perspective at least (see Sferra & Merzagora, 2006).

While the ritual works and commentaries attributed to the great saints of India were and are revered by Tibetans, every Tibetan practice tradition has developed its own ritual manuals based in part on works such as these. For example, the Sa skya "path-and-fruit" tradition preserves an array of ritual manuals for the practice of the various rites of initiation. These works were composed by the great masters of this tradition, Sa chen Kun dga' snying po and Grags pa rgyal mtshan (Sobisch, 2008, 92–93).

Tibetan Developments

It should not be thought that the Tibetans were slavish followers of Indian Buddhist scriptural precedents. While Tibetan Buddhists, generally speaking, venerate the vast corpus of Indian works translated in collections such as the Kanjur, Tanjur, and the *Rnying ma rgyud 'bum*, these works, which typically grace the altars or textual collections of Tibetan Buddhist temples and monasteries, are very rarely consulted by contemporary practitioners.

This is because each of the major Tibetan traditions, typically within several generations following their establishment, has given rise to great masters who were learned in the translated Indian works that formed the scriptural core of their traditions, and who then composed new works that helped clarify these often obscure works for their Tibetan students.

These include scholars such as Sa chen Kun dga' snying po, Bu ston Rin chen grub, Tsong Khapa, Padma dKar po, and Tāranātha. All of these authors wrote commentaries on the *tantra*s and Indian ritual manuals that were important for their traditions, and they either composed new ritual manuals or inspired their successors to do so.

Tibetan authors in the *gsar ma* schools not only built on the foundations of the textual and practice traditions that they inherited from India but also innovated and created new ritual genres that either filled gaps in the traditions received from India or addressed uniquely Tibetan concerns. One of these genres is preliminary-practice (*sngon 'gro*) texts that describe the practices that novice students are to undertake. This was a real lacuna in the transmission of texts from India. There is, of course, no doubt that Indian Buddhist communities developed systems of preparatory practice for neophytes, and some Indian authors comment generally that initiates should be "well-educated in mantra and *tantra*" (*mantratantrasuśikṣita*; see Gray, 2011a, 456). However, the Tibetan canon contains no translated texts detailing this practice.

The Tibetans filled this gap, likely on the basis of both oral teachings and innovation on their part. The end result of this process was the now ubiquitous tradition of novices needing to complete four sets of practices 100,000 times each. Tibetan Buddhist authors divide preliminary practices into two types, outer and inner. Outer preliminaries consist of contemplating topics such as the preciousness of human birth, karma, suffering, and impermanence, topics that are covered by "stages-of-the-path" (*lam rim*) literature. The inner preliminaries usually consist of performing 100,000 repetitions of prostrations, recitations of Vajrasattva's hundred-syllable mantra, *maṇḍala* offerings, and guru yoga visualizations.

The Tibetan practice of having novice students engage in preliminary practices developed gradually. Each tradition gradually developed systems of practice for all levels of practitioners. The Sa skya "fruit-and-path" tradition developed practice manuals for the recitation of Vajrasattva's hundred-syllable mantra (Sobisch, 2008, 93). And while prostrations and *maṇḍala* offerings were well-known practices in India, Tibetans developed guidebooks for these practices as well.

The practice of guru yoga appears to be a Tibetan innovation. South Asian tantric Buddhist traditions generally encouraged devotion to one's guru. Many *tantra*s prescribe a devotional attitude, and this is discussed at length in a late Indian Buddhist work, the *Gurupañcāśikā* (The 50 Stanzas on the Guru; see Sparham, 1999). However, it appears that Tibetans developed the practice of guru yoga, which is a variant of deity yoga practice in which one visualizes one's guru in front of or above oneself as a deity and unites oneself with the guru. It is a devotional practice that is also a preparation for the more complex deity yoga visualizations. While it is possible that Indian Buddhists developed this practice, there is no textual record that this is the case, so it appears that it was the Tibetans who developed this genre of ritual literature. The first Tibetan to compose a guru yoga work was Sa skya Paṇḍita (1182–1251). Shortly after he assumed the position of leadership in the Sa skya school in 1216, he composed a work entitled *Lam zab mo bla ma'i rnal 'byor* (Guru Yoga: The Profound Path; see TBRC website W2DB4570). It was among a number of short works for the guidance of his students (Rhoton, 2002, 14).

Eventually Tibetan authors developed the system of fourfold preliminary practices. It appears that one of the first authors to advance this way of doing preliminary practices was the eighth Karmapa Mi bskyod Rdo rje (1507–1554; see Khenpo Karthar Rinpoche, 2012). His successor, the ninth Karmapa Dbang phyug rdo rje (1556–1603), wrote both the liturgy on fourfold preliminary practice that is still used in the Karma Bka' brgyud tradition, entitled the *'Phags lam bgrod pa'i shint rta* (Chariot for Traveling the Noble Path), and a commentary on the practice, entitled *Phyag rgya chen po lhan cig skyes sbyor khrid* (Instructions for Spontaneous Union with the Great Seal; for both, see TBRC website W3JT13314). However, the best-known commentary on the practice is the *Nges don sgron me* (The Torch of Certainty), which was composed by the 19th-century master 'Jam mgon Kong sprul Blo gros Mtha' yas pa (1813–1899; see Jamgon Kongtrul, 2000).

There are many other Tibetan developments as well. The female Tibetan master Ma gcig Lab sgron (1055–1149) developed the contemplative practice, and ritual manuals describing it, of "cutting" (*gcod*), which involves visualizing the offering of one's body to the hungry sentient beings of the cosmos (Edou, 1996). Tibetans Buddhists also worship a large number of indigenous Tibetan deities as "dharma protectors" (*chos skyong*) and thus composed a large number of uniquely Tibetan ritual manuals detailing the worship of these deities (Nebesky-Wojkowitz, 1975, 398–408). Tibetans developed many other ritual practices and associated ritual literature for purposes such as oracles and their divinatory trance rituals, other divination rituals, weather-making rituals, and offensive and defensive war magic rituals (Nebesky-Wojkowitz, 1975, 409–537), which are beyond the scope of this entry. These rituals are products of the centuries-long adaptation of Buddhism to Tibet, a process that involves the transformation of many indigenous ritual practices into "Buddhist" rites, often via the application of a very thin Buddhist ritual veneer.

This points to the dynamic nature of tantric Buddhist traditions, which have throughout their history changed over time to adapt to new circumstances. Tantric rituals, as practiced today, are the end result of centuries of development, and this process is ongoing. These traditions will continue to change as they adapt to the very different circumstances of today's globalized, interconnected world.

Ritual Texts: Korea

Buddhist ritual refers to the diverse ceremonial practices performed by the Buddhist community, and in the case of Korea, it encompasses the regulations governing the lives of Buddhists in Korean society and their essential features. Buddhist ritual texts denote the manuals that prescribe the rules and formalities of the liturgical proceedings for Buddhist rituals.

Publication of Buddhist Ritual Texts in Korea

In Korea, all surviving Buddhist ritual texts are from the Chosŏn (朝鮮) period (1392–1910; for a compilation of Buddhist texts published in the Chosŏn period, see Pak, 1993). The establishment of Buddhist orders immediately followed the transmission of Buddhism and its official adoption as the state ideology during the 4th–6th centuries CE in the three kingdoms of Korea. Along with the institutionalization of Buddhism, its ceremonial practices were also systematized, and they were frequently enacted to wish for the prosperity of the state as well as the welfare of individuals. The *Samguk yusa* (三國遺事; Memorabilia of the Three Kingdoms), a major source for ancient Korean history compiled by the monk Iryŏn (一然; 1206–1289) in 1281, reports on various Buddhist ritual practices during the Three Kingdoms (1st cent. BCE–668 CE) and the Unified Silla (統一新羅; 668–935 CE) periods. For instance, the monk Myŏngnang (明朗) conducted an esoteric Buddhist ritual called *mundurubŏp* (文豆婁法; method of *mudrā*) based on the *Guanding fumo fengyin dashenzhou jing* (灌頂伏魔封印大神呪經; *Sūtra* on the *Mūdra* and Mantra of Defeating Māra by *Abhiṣeka*; T. 1331.7) in 671 CE in order to subdue the Tang (唐) troops that had invaded the Silla Kingdom (*Samguk yusa* 5: *Myŏngnag sinin* [明朗神印]; The Numinous *Mūdra* of Myŏngnang). It also records that in 760 CE another Silla monk, Wŏlmyŏng (月明), performed a Buddhist ritual to resolve the mishap of having two suns in the sky for more than ten days (*Samguk yusa* 5; *Wŏlmyŏngsa Tosolga* [月明師兜率歌]; The Song of Tuṣita of the Master Wŏlmyŏng). These anecdotes, however, deliver only brief accounts of the incidents without further records of details of the rituals and their procedures, and our knowledge about them remains sparse.

More proper information about Buddhist rituals became available later, beginning with the Koryŏ (高麗) period (918–1392), the "era of rituals." This period saw a great increase of Buddhist rituals in both frequency and variety. Particularly, state-sponsored comprehensive Buddhist rituals such as *palgwanhoe* (八關會; eight-vows festival) and *yŏndŭnghoe* (燃燈會; lantern festival) were actively performed (An, 2011, 6–11). The rituals consequently became standardized for regular performance, and some of them were even absorbed into the secular custom of the society. The *Koryŏsa* (高麗史; History of Koryŏ; 23.11) records the occasions of various Buddhist rituals. In addition, diverse Buddhist scriptures including those associated with the Hwaŏm (Chn. Huayan [華嚴]) school as well as esotericism, the principal sources of Buddhist rituals, were published during the Koryŏ period. The catalogue of the Buddhist canon (*Taejanggyŏng mongnok* [大藏經目錄]) compiled by the monk Sugi (守其) around 1251 records 191 texts in 356 volumes classifiable as "pure esoteric," including the *Dapilu zhena chengfo shenbian jiachi jing* (大毘盧遮那成佛神變加持經; *Sūtra* on the Transference from the Miracle of the Enlightenment of Mahāvairocana; 7 vols.; K 427/T. 848), the *Jingangding jing* (金剛頂經; The Diamond Pinnacle *Sūtra*; 3´vols.; K 1274/T. 865), and the *Wunengsheng damingxin tuoluoni jing* (無能勝大明心陀羅尼經; *Sūtra* on the *Dhāraṇi* of the Wisdom King Ajita; 1 vol.; K 1301/T. 1233). Additionally, esoteric ritual manuals comprise 20 texts in 21 volumes including the *Darijing lüeshe niansong suixingfa* (大日經略攝念誦隨行法; The Method of Practicing Invocation Excerpted from the *Mahāvairocanasūtra*; 1 vol.; K 1362/T. 857), the *Jingangding yujia humo yi* (金剛頂瑜伽護摩儀; The Method of Yoga *Homa* of the Diamond Pinnacle *Sūtra*; 1 vol.; K 1335/T. 908), and the *Foding zunsheng tuoluoni niansong yigui* (佛頂尊勝陀羅尼念誦儀軌; Ritual Manual of Invoking the *Uṣṇīṣavijayadhārāṇi*; 1 vol.; K 1314/T. 972; Sŏ, 1997, 279). list, it is possible to assume that, indeed, an ample number of ritual texts must have been published in the Koryŏ period, but none is extant today.

In the following Chosŏn period (1392–1910), the invention of the Korean alphabet, Han'gŭl, under King Sejong (世宗; r. 1418–1450) led to the Korean translation of Buddhist scriptures from Chinese (Eda, 1936, 10–36) and allowed the general public to easily read the scriptures. During the reign of King Sejong, the Kan'gyŏng togam (刊經都監), a government office for publishing Buddhist scriptures, was installed mainly to supervise the Korean translation of Buddhist texts. After the Kan'gyŏng togam was abolished in 1471, as a result of Confucian scholars' hostility against Buddhism, the state-sponsored publication of Buddhist scriptures no longer remained in operation. Instead, the scriptures began to be published extensively by Buddhist temples throughout the country. Popular texts used in Buddhist rituals such as mantra collections and ritual manuals were also produced in Korean translations. Since the purpose of publishing scriptures in Korean was primarily to make them available to the common populace, it generated an environment for Korean Buddhism to advance into a different spectrum in faith and social characteristics from the preceding era, thus reflecting a greater popularization of Buddhism in society (Ch'oe, 1993, 219–226).

Ritual Texts

Buddhist ritual texts currently surviving in Korea can be divided into two types. The first type stipulates the procedure of worship services and ceremonies that accommodate the participation of lay believers. Lay Buddhist devotees wishing to achieve prosperity in their present life as well as to pray for a favorable rebirth of deceased kin took an active role in various rituals held at Buddhist temples. Each ritual involved a specified purpose and procedure and thus necessitated a proper ritual text. The ritual texts classified into this type include the following:

1. those related to the ceremonies performed particularly for deceased souls, for example *suryukchae* (水陸齋; ritual of water and land), *yesujae* (預修齋; ritual of advanced practice), and *yŏngsanjae* (靈山齋; ritual of Mount Gṛdhrakūṭa);
2. those for various other worship services; and
3. those for rituals concerning the creation of Buddhist statues or paintings.

The second type of texts concerns the daily ritual practices of Buddhist monks. Buddhist monks routinely performed rituals in accordance with the level of their monastic practice. To guide the individual practitioner, the monasteries published ritual texts with appropriate contents and procedures. Therefore, these publications were restricted to those who entered the Buddhist priesthood (Nam, 2012, 16).

Texts Associated with the Rituals of Guiding the Deceased

The ritual texts on *suryukchae* constitute the majority of the publications associated with the rituals of guiding the deceased (*ch'ŏndojae* [薦度齋]). *Suryukchae* refers to the Buddhist ceremony of preaching and food offering to appease restless souls wandering in the water and land. The tradition of *suryukchae* is known to have been initiated by Emperor Wu (武; 464–549 CE) of Liang (梁) in China. In Korea, the earliest account of its performance is dated to 970 CE, and the *Koryŏsa* confirms that the practice continued until the end of the Koryŏ period. *Suryukchae* was held as a grand state-sponsored ceremony especially during the early Chosŏn period, despite the fact that by this time Confucian rituals replaced those of Buddhists owing to the official policy of the suppression of Buddhism. The general objectives of performing *suryukchae* are rooted in the people's aspiration to extinguish natural disasters, receive good fortune, guide the deceased souls into paradise, and be cured from sicknesses. The ceremony was held not to benefit an individual but often for the good of the general public (Kim, 2001, 27–75). The Chosŏn people believed that all sort of calamities harmful to living beings occurred because of restless souls who died in unfortunate circumstances, thus wandering in the water and land. The people evidently demanded the state to hold *suryukchae* when they were confronted with natural disasters or epidemics. Such a conceptualization derives to some extent from belief in the shamanistic practice of necromancy, serving to placate the resentment of deceased souls. *Suryukchae* was enthusiastically espoused in the process of the Buddhist community embracing some shamanistic functions.

In the early 16th century, however, *suryukchae* was abolished owing to the strong opposition of Confucian scholars, and thereafter it was no longer performed as an official state ceremony. *Yŏje*

(Chn. *liji* [厲祭]), the Confucian counterpart, eventually replaced *suryukchae*, though without much enthusiasm from the public, who were more attached to *suryukchae*. The abolition of *suryukchae* was ultimately an act of obstructing the passage through which the public's anxiety is conciliated and of blatantly imposing the ideology of the king and the ruling Confucian scholars without heeding the needs of the common people. In fact, the ancestral rites of Confucianism functioned only as an implement subordinate to the political order and did not derive from the devotional needs of the people. Furthermore, because Buddhist-style commemorative rites for ancestors were predominant among common people, *suryukchae* continued to be performed even after its official abolition. Consequently, the publication of ritual texts related to *suryukchae* uninterruptedly thrived in the 16th to the 17th centuries across the country.

The most widely used ritual texts of *suryukchae* are the *Suryuk much'a p'yŏngdŭng chaeŭi ch'walyo* (水陸無遮平等齋儀撮要; Compendium on the Indiscriminating Ritual of the *Suryukchae*; Pak, vol. I, 1993, 621–650) and the *Ch'ŏnjimyŏngyang suryukchaeŭi ch'anyo* (天地冥陽水陸齋儀纂要; Compendium of the *Suryukchae* for the Souls in Heaven and Earth and This World and the Next; Pak, vol. II, 1993, 215–250).

The *Suryuk much'a p'yŏngdŭng chaeŭi ch'walyo*'s earliest surviving copy was printed in 1470, but its original compiler is unknown. The text, which comprises 30 chapters, begins by addressing its intent and continues to elucidate the inviting of the deceased souls and the burning of incense to greet the messengers from the netherworld. The messengers from the netherworld are presented with food and prayers and sent away. The ritual space is purified, and offerings are given to the three treasures (Buddha, the law of Buddha, and a Buddhist monk). Then, the heavenly spirits are invited and also given offerings. The ritual proceeds with calling on the deceased souls. Before they are presented to the Buddha and bodhisattvas, the rituals of bathing the deceased souls and of dressing them with new clothes are performed. The prayer to supplicate their salvation is offered to the buddhas and bodhisattvas, and food is offered to the deceased souls. Lastly, the participants in the ritual repent their own wrongdoings and recite the four great vows. And at this moment, the deceased souls receive the blessing of the buddhas and bodhisattvas and become the Buddha's disciples, thus attaining salvation.

The *Ch'ŏnjimyŏngyang suryukchaeŭi ch'anyo* is a compilation of 54 chapters selected from various versions of *suryukchae* ritual texts; its compiler and original publication date are unknown. The extant edition was printed in 1694 and includes a postscript written by the monk Wanwŏl Ch'ŏhwi (翫月處輝) who administered the printing and who explicates that though there are 67 kinds of ritual texts incorporated on *suryukchae*, the *Chungnyemun* (中禮文) and the *Kyŏlsumun* (結手文) are the most prevalent since they surpass other texts in their organization of the content. The current edition was produced because other earlier editions that the Haeinsa Monastery used to own had long been lost. This account allows us to assume that the text was adapted from the *Chungnyemun* and the *Kyŏlsumun* into a more comprehensible form. Its content is largely similar to the *Suryuk much'ap'yŏngdŭng chaeŭi ch'walyo*.

Furthermore, the *Ch'ŏnjimyŏngyang suryukchaeŭi pŏmŭm sanbojip* (天地冥陽水陸齋儀梵音刪補集; Supplement on the Sanskrit Chanting in the *Suryukchae* for the Souls in Heaven and Earth and This World and the Next; Pak, vol. III, 1993, 1–184) is a later text on *suryukchae* published in the 18th century, of which several copies are extant, including those printed in 1709, 1721, and 1739. The monk Chihwan (智還), who was mainly active in Mount Chirisan (智異山), compiled this text consisting of 96 pieces. The information about Chihwan is scarce, but he seems to have been a pupil of Paegam Sŏngch'ong (栢庵性聰; 1631–1700), who was the third-generation disciple of Puhyu Sŏnsu (浮休善修; 1543–1615), a renowned monk of the mid-Chosŏn period. The preface, written by Chihwan's dharma brothers Myŏngan (明眼) and Suyŏn (秀演), both disciples of Paegam Sŏngch'ong, informs about the purpose and the process of its publication. It begins with the statement that Chihwan compiled the text out of deep concern for Buddhist chant losing its true nature, along with a brief account of the history of Buddhist chant (*pŏmp'ae* [梵唄]). It goes on to state that the *Ch'ŏnjimyŏngyang suryukchaeŭi pŏmŭm sanbojip* is based on the following five kinds of texts on Buddhist chant (*pŏmŭmjip* [梵音集]):

1. *Soryemun* (*Xiaoliwen* [小禮文]);
2. *Taeryemun* (*Daliwen* [大禮文]);
3. *Yesumun* (*Yuxiuwen* [預修文]);
4. *Chibanmun* (*Zhipanwen* [志磐文]); and
5. *Chagimun* (*Zikuiwen* [仔夔文]).

Chihwan carefully selected and rearranged the ritual proceedings from these five texts into a single compilation in three chapters. While more than

60 ritual texts related to *suryukchae* were transmitted from China to Korea, only these five were in particular favored in Chosŏn, and Chihwan conveniently compiled excerpts from these five into a single volume. This development is closely tied to the general trend of Buddhist rituals being gradually refashioned as a form of performing art after the 18th century (Nam, 2004, 66–71).

The ritual texts mentioned above were produced by editing and reorganizing parts selected from several ritual texts related to *suryukchae*. There is another type, which was created through editing a single text; the *Chagi sanbomun* (仔夔刪補文; Pak, vol. II, 1993, 251–426) and the *Pŏpkye sŏngbŏm suryuksŭnghoe sujae ŭikwe* (法界聖凡水陸勝會修齋儀軌; Ritual manual on Performing the *Suryukchae* for Holy and Lay People of the *Dharmadhātu*; Pak, vol. I, 1993, 573–620) belong to this type. The *Chagi sanbomun* is a reedited version of the *Chagimun*, one of the five texts of Buddhist chant popularly used in Chosŏn (see above). Its earliest surviving edition is a woodblock print made in 1568. Adjustments appropriate to the situation of Chosŏn were made to this text, as the Chinese original *Zikuiwen* was considered too complex. Nonetheless, the use of the *Chagi sanbomun* on the occasion of *suryukchae* may have been limited, considering the fact that it was not printed in substantial numbers, in contrast to the two abovementioned ritual texts. When performing *suryukchae*, the populace probably favored a simpler form of the ritual rather than a complex one. Another notable text in this group is the *Pŏpkye sŏngbŏm suryuk sŭnghoe sujae ŭikwe*, a reedited version of the *Chibanmun*/*Zhipanwen* by the Chinese Zhipan. Its earliest surviving edition is dated to 1470.

Another text associated with the rituals of guiding the deceased is the *Yesu siwangsaeng ch'iljaeŭi ch'anyo* in 31 chapters (預修十王生七齋儀纂要; Compendium of the Seven Rituals of Advance Offering to the Ten Kings of Hells; Pak, vol. II, 1993, 65–126), which contains the ritual proceedings of *yesujae*. It was written by the Sŏn (Chan [禪]) monk Taeu (大愚), but the precise date of its publication is unknown. The currently remaining two versions are printed in 1576 and 1680. *Yesujae* is a Buddhist ritual performed to accumulate merit while living in order to secure a favorable rebirth after one's death. For this meritorious act, one aims to receive recognition from the Ten Kings of hell, by whom a deceased soul will be judged, and to attain rebirth in Kŭngnak (極樂; Skt. Sukhāvatī).

After the 16th century, as popular demand for rituals guiding the deceased increased, providing ritual services for the dead became an important part of the Buddhist community's activity. In tandem with this growing tendency, the necessity of organizing a ritual for the dead was recognized, even within the Sŏn school known for its emphasis on the attainment of enlightenment through meditation. The key issue was how to incorporate this ritual that emphasizes reciting mantras, a strong esoteric element within Sŏn practice – ordinarily not compatible. The ritual text *Unsudan* (雲水壇; Pak, vol. II, 1993, 47–64), compiled by Ch'ŏnghŏ Hyujŏng (淸虛 休靜; 1520–1604), a prominent Sŏn monk of the mid-Chosŏn period, demonstrates how Sŏn responded to this problem. Currently only a woodblock print produced in 1607 remains, along with a number of later editions. The text details the procedures of giving offerings to the buddhas and bodhisattvas of the high-status realm, the heavenly beings of the middle-status realm, and the spirits of the low-status realm, according to the distinctive classification of the three-status rituals of the Chosŏn period. The proceedings are as follows:

1. a prefatory procedure prior to the actual offering, which involves cleansing the ritual precinct and chanting mantras of purifying the participant's heart;
2. the incantation of mantras and *gāthā*s of receiving buddhas and bodhisattvas of the high-status realm and giving offerings;
3. the incantation of mantras and *gāthā*s of receiving heavenly deities of the middle-status realm and giving offerings; and
4. the incantation of mantras and *gāthā*s of receiving the spirits of the low-status realm and giving offerings, and of the wishes to guide them into paradise.

Here, the offering ritual addressed to the middle-status group particularly reveals that the text was edited in the stance of Sŏn practice. The features distinctive of the Sŏn tradition are integrated in the offerings of incense (*haet'alhyang* [解脫香]), lanterns (*panyadŭng* [般若燈]), flowers (*manhaenghwa* [萬行花]), and tea (*kamnoch'a* [甘露茶]).

Ritual Texts on Other Worship Services

Apart from texts on the rituals of guiding the deceased, some were produced for the purpose of other worship services. Two notable examples are the *Yenyŏm Mit'a toryang ch'ambŏp* (禮念彌陀道場懺法; The Method of Penitence in the Ritual of Reverent Invocation of Amitābha: Pak, vol. I, 1993, 245–260) and the *Yenyŏm wangsaengmun* (禮念往生文; The Reverent Invocation for Rebirth; Pak, vol. IV, 1993, 197–252), and both involve the ritual of the invocation of Amitābha. These two texts indicate that the Pure Land convention of invoking Amitābha developed as a separate ritual practice.

The *Yenyŏm Mit'a toryang ch'ambŏp* concerns the ritual regulation of repenting one's wrongdoings (*ch'ambŏp*) with prayers (e.g. the *Amit'agyŏng* [阿彌陀經]), the dedicatory writing concerning the wish to gain enlightenment, and the importance of invocation and repentance. It comprises 13 chapters entirely written in Chinese without mantras. It was initially compiled by Wang Zicheng (王子成) in 1213 during the Jin dynasty, transmitted to Korea during the Koryŏ period, and widely used in the Chosŏn period. The earliest extant edition is dated to 1474 and was republished several times.

The *Yenyŏm wangsaengmun* is also a text used in the invocation ritual addressed to Amitābha. The colophon is now lost, and thus the publication details, including the name of the compiler and the year of the first publication, are not known. However, the fact that the transcription is executed in a combination of Chinese and Korean characters, or partly Korean, only suggests that the text was most likely compiled after the mid-Chosŏn period. A more precise dating of the 18th century may be deduced from the *Wŏlchŏdang taesajip* (月渚堂大師集; 1717), a collection of literary works of Wŏlchŏ Toan (月渚道安; 1638–1715), which encourages alms from people to fund the printing of a thousand copies of the *Yenyŏm wangsaengmun*. The presence of the above two texts indicates that the Pure Land convention of invoking Amitābha developed as a separate ritual practice.

Another ritual text related to the Pure Land school with an esoteric Buddhist character is the *Hyŏnhaeng pŏphoe yech'am ŭisik* (現行法會禮懺儀式; The Ritual of Reverent Penitence in a Service for Rebirth from the Present Life; D 4349; currently in the Dongguk University Library). This text, compiled by the monk Myŏngan (明眼) in 1709 as an appendix to the Pure Land text *Hyŏnhaeng sŏbanggyŏng* (現行西方經; The *Sūtra* of Rebirth in the Western Pure Land from the Present Life), contains prayers for the attainment of rebirth in the western Pure Land. The *Hyŏnhaeng sŏbanggyŏng*, written by the monk Wŏnch'am (元昆) in 1298, is a scripture related to the Pure Land faith; it elucidates the practice of predicting the place of one's rebirth in the afterlife by casting sticks and the practice of repentance as a method to achieve rebirth in the Pure Land.

The *Hyŏnhaeng pŏphoe yech'am ŭisik* begins with a *gāthā* of inviting the three treasures and giving offerings, and the description of a ritual of lay people receiving the eight precepts. Next, it proceeds to stipulate the procedure of holding the service dedicated to the buddhas and bodhisattvas and gives the prayers of repentance and mantras. The following part concerns a ritual of "burning of the arm" (*yŏnbi* [燃臂]) and prayers and ends with food offerings. The text stresses the immediate efficacy of the merit that is obtained through this ritual by emphasizing that no calamity may penetrate the space where the ritual is performed and that whoever performs the ritual shall accomplish "right conduct" (*jŏngŏp* [淨業]) within a day.

In addition, there is the *Sŏlsŏnŭi* (說禪儀; Pak, vol. II, 1993, 29–46), authored by the monk Ch'ŏnghŏ Hyujŏng and printed in 1634. It is a text dealing with the ritual proceedings of *sŏlsŏn pŏphoe* (說禪法會), the service aiming to prompt enlightenment after listening to the preaching of Sŏn monks. Chosŏn, as opposed to the Koryŏ period, saw a decline of the Buddhist doctrinal school due to the official oppression of Buddhism. Since only the Sŏn school maintained the strand of its tradition, the popular service of Sŏn teachings (*sŏlsŏn* [說禪]) flourished. It was authored by the monk Ch'ŏnghŏ Hyujŏng and was printed in 1634. The *sŏlsŏn ŭisik* is a ritual of the Sŏn school performed to explicate the principle of its doctrine, adopting the form of Śākyamuni offering sermons to the assembly. The *Sŏlsŏnŭi* includes ritual procedures and *gāthās* as well as details on the ways in which the ritual space ought to be adorned, even to the positioning of the participants. It is a manual for the *sŏlsŏn pŏphoe* ceremony of the Sŏn school in which both monastics and lay believers engaged. The author of this text, Ch'ŏnghŏ Hyujŏng, previously reedited the proceedings of the existing offer rituals to compile the *Unsudan* (see above) and the *Sŏlsŏnŭi* in a way suited to the Sŏn school while incorporating mantras, thus initiating the Sŏn rituals to foster the traits of the esoteric school. The synthesis of Sŏn and esotericism is also seen in the incorporation of the *Nŭngŏmju* (楞嚴呪), a body of mantras excerpted from the *Nŭngŏmgyŏng* (*Lengyanjing* [楞嚴經]; *Laṅkāvatārasūtra*), one of the principal Sŏn scriptures incorporated into various esoteric rituals (Sŏ, 1983, 140). The *Sŏlsŏnŭi* contains two supplements, the *Tongguk chesan sŏndŭng chikchŏmdan* (東國諸山禪燈直點壇) and the *Sŏnwang sŏnhu chojong yŏlwidan* (先王先后祖宗列位壇). The

former involves calling on the spirits of eminent monks and serving offerings, and the latter also stages a similar ritual to the kings and queens of past generations of the dynasty. The inclusion of these two books indicates that monks, and kings and queens, also received offerings in the Sŏn rituals.

The *Taejang illamgyŏng chosang p'um(-siboch'ik)* (大藏一覽經造像品[十五則]; [The 15 Rules in] the Chapters on Making Images from the Great Collection of *Sūtras*; acc. no. *ko* 1730–31 in the Kyujanggak Institute of Korean Studies of Seoul National University) is a text that contains the mantras and the ritual procedures involved with the enshrinement of various objects (such as scriptures) inside the abdomen of the statue of a buddha or a bodhisattva. The text was originally a part of the *Dazang yilan jing* (大藏一覽經) compiled by Chen Shi (陳實) of Ming China; its chapter on the production of visual images was produced as a separate text. The text is suffused with distinct esoteric features, as a substantial part of its content consists of mantras. A woodblock print from 1824 is extant.

Apart from the aforementioned texts, more publications relating to various ritual services were possibly circulated, but surviving materials are not substantial. The genre called *so* (疏; annotations), compiled in literary works of monks of the Chosŏn dynasty, though limited, serves as a source to learn more about the Buddhist rituals performed in the period; the writings of this genre usually provide general information about the ceremony and also reserve space for dedicatory writings, often to encourage lay believers' participation. These writings are mostly concerned with wishes for the rebirth of the dedicators' deceased parents or teachers in paradise or for their own fortune and the accumulation of merits in the present life (writings on rituals by monastics are compiled in *Han'guk pulgyo chŏnsŏ*, vols. VII–X). The *so* texts also include annotations for worship services, such as the *Yaksahoe-so* (藥師會疏; Commentary on the Service for Bhaiṣajyaguru), *Mit'adoryang-so* (彌陀道場疏; Commentary on the Service for Amitābha), *Sojaedoryang-so* (消災道場疏; Commentary on the Service for Removing Calamities), *Chijangdoryang-so* (地藏道場疏; Commentary on the Service for Kṣitigarbha), *Nahandoryang-so* (羅漢道場疏; Commentary on the Service for Arhats), and *Kwanŭmdoryang-so* (觀音道場疏; Commentary on the service for Avalokiteśvara), indicating that these rituals were performed during the Chosŏn period. However, they are merely mentioned in the encyclopedic ritual manuals used today; due to a lack of related sources, it is not quite certain whether a separate text existed for each ritual.

Ritual Text on Daily Monastic Practice

A text with a description of the daily rituals of Buddhist monastics is the *Sŭngga iryong siksi mugŏn chakpŏp* (僧伽日用食時默言作法; The Method of Practicing Silence during Monastic Meals; Pak, vol. III, 1993, 519–568). It was compiled by the monk Chŏnghaeng (井行; dates unknown) and published in 1869. The author states that it was published to aid monks to obstruct sexual desire and be vigilant against malicious habits. It lays down the ritual proceedings and the mantras or *gāthās* to be memorized and recited during the daily rituals of meditation, worship, and invocation. The text thus is a guidebook for maintaining the monastic life of monks.

Ritual Texts on Monastic Funerals

Another type of ritual text used by Buddhist monastics involves monastic funerals, and four examples are extant:

1. *Sŏngmun sangŭi ch'o* (釋門喪儀抄; Compendium for the Buddhist Funeral Rite; Pak, vol. II, 1993, 453–472);
2. *Sŏngmun karye ch'o* (釋門家禮抄; Compendium for Buddhist Rites; Pak, vol. II, 1993, 155–178);
3. *Sŭngga yeŭi mun* (僧伽禮儀文; Writing on Buddhist Rites; Pak, vol. II, 1993, 427–436); and
4. *Tabimun* (茶毘文; Writing on Cremation; acc. no. *kyu* 5396 in the Kyujanggak Institute of Korean Studies of Seoul National University).

The *Sŏngmun sangŭi ch'o*, compiled by Pyŏgam Kaksŏng (碧巖 覺性; 1575–1660), has two chapters. The preface begins with regrets for the absence of standard formalities and rules of monastic funeral, for example, in funeral orations and attires, and substantiates the reason for its publication. Pyŏgam Kaksŏng explains that although Chinese practices on monastic rites are prescribed in detail in the *Chanyuan qinggui* (禪院淸規) by Cijue (慈覺), the *Wushanji* (五杉集) by Yingzhi(應之; dates unknown), and the *Shishi yaolan* (釋氏要覽) by Daocheng(道誠; dates unknown), they do not fit the decorum of Chosŏn. He thus reasons for the compilation of the *Sŏngmun sangŭi ch'o* conforming to contemporary circumstances, while consulting preexisting Chinese texts. The text's chapter 1 contains illustrations of the *obokche* (五服制; five-attire regulation) of the monastics. This five-attire regulation originally refers to the Confucian system of five types of mourning attire, determined by the degree of kinship of the mourner to the departed, and can be seen as a part of the Buddhist community's attempt to diminish the gap between Buddhism and Confucianism. The chapter proceeds to explain the steps of selecting the burial site and coordinating the funeral procession. Chapter 2 elucidates the procedure of placing cremated remains inside a stūpa and the method of writing a eulogy appropriate to the status of the dead as well as the style of funeral orations.

The *Sŏngmun karye ch'o* is a ritual text for the funeral rites of Buddhist monastics compiled by Naam Chinil (懶庵眞一), a disciple of Pyŏgam Kaksŏng; a copy published in 1660 is extant. It, too, contains illustrations of the five-attire regulation of monastics. For instance, when the founder of the order (*chosa* [祖師]) passes away, one would wear the mourning dress for nine months, for one's parents three years, for one's training teacher (*suŏpsa* [受業師]) three years, for one's nurturing teacher (*yangyuksa* [養育師]) three years, for one's disciple (*ch'injeja* [親弟子]) one year, for one's disciples of the dharma lineage (*ch'inbŏpson* [親法孫]) nine months, and for one's ordination teacher (*chŭnggyesa* [證戒師]) nine months. Moreover, it includes two illustrations of the five-attire regulation of the Confucian system – *ponjongobokchido* (本宗五服之圖; The Illustration of the Five Funeral Attires according to the Degree of Kinship) and *ponjongobokch'onsudo* (本宗五服寸數圖; The Illustration of the Size of the Five Funeral Attires). The *myŏngjŏng sŏgyu* (銘旌書規; the rule for writing a banner used in a funeral rite on which the name and the position of the dead is written) details the method of inscribing on the spirit tablet of the dead classified into the following categories: great teacher (*taejongsa* [大宗師]), invoker of the Buddha's name (*yŏmburin* [念佛人]), meditator (*ch'amsŏnin* [參禪人]), administrative superintendent (*p'ansain* [判事人]), scholarly follower (*haktoin* [學道人]), and administrative commoner (*p'yŏngsangin* [平常人]). The content of chapter 2 is almost identical to that of the *Sŏngmun sangŭi ch'o* except for several additional eulogies. On the basis of the *Sŏngmun sangŭi ch'o* compiled by his teacher Pyŏgam Kaksŏng, Naam Chinil added in the *Sŏngmun karye ch'o* a detailed description of the ritual proceedings of the five-attire regulation, guidelines for the lighting of the fire for the cremation, and guidelines for the customary breaking of the cremated remains.

The *Sŭngga yeŭi mun*, consisting of 16 chapters, was written by Hŏbaek Myŏngjo (虛白明照; 1593–1661), a pupil of Sa'myŏng Yujŏng (四溟惟政; 1544–1610), who was a renowned master of the mid-Chosŏn period. It was published in 1669. Its content is similar to the *Sŏngmun karye ch'o*, except for minor differences in the description of the five-attire regulation, the subheadings, and the order of the proceedings. The rule for the monk's funeral rite in this text is particularly notable. When a monk passes away, the chief priest should be notified, who sends word to the main monastery and the branch monasteries. Then the participants would position Buddhist scriptures such as the *Gŭmganggyŏng* (金剛經; Diamond *Sūtra*) and the *Pohyŏn haengwŏn p'um* (普賢行願品; the *Bhadracaryā* chapter of the *Buddhāvataṃsakasūtra*), food, drink, and rice cake and chant the scriptures to assist the dead to be reborn in paradise. After the *Sŏngmun karye ch'o* was published in 1660, other ritual texts with similar contents appeared. During the Chosŏn period, there were unceasing disputes over the protocols of Confucian funeral rites, generating constant adjustments, for example, in the duration of wearing the mourning dress. Complying with these changes, the Buddhist community must also have felt the need to emend their own rituals, which led to the production of revised versions of ritual texts on monastic funerals.

The *Tabimun* was written by Ch'udam Chŏnghaeng (秋淡 井行; dates unknown) in 1882. It includes ritual procedures from the deceased monk's cremation to the scattering of the ashes. Although the text is similar to the three earlier publications, it surpasses the others in its organization and in addition contains *dhāraṇī*s and *gāthā*s. To sum up, these ritual texts reveal that the funeral ceremonies of Buddhist monastics were indeed orchestrated with the stimulation of the Confucian system of funeral rites such as the *zhuzi jiali* (朱子家禮; the family rites of Zhu Xi, a Neoconfucian scholar from the Song China) during the time when Neo-Confucian liturgical texts were extensively published, influencing every social stratum of Chosŏn society (Chŏng, 1998, 130).

Encyclopedic Buddhist Ritual Texts

The *Chakpŏp kwigam* (作法龜鑑; The Exemplar of Performing Rituals; Pak, vol. III, 1993, 371–470), compiled in the early 19th century, comprehensively explicates various Buddhist rituals. It not only describes the proceedings of the rituals of guiding the deceased such as *suryukchae* but also extensively

treats other ritual procedures including *chŏmansik* (點眼式; the ritual of dotting the eyes of the Buddha in a painting or a statue), *iunsik* (移運式; the ritual performed when a painting, statue, or stūpa is transported to the place of its enshrinement), and *tabisik* (茶毘式; the cremation ritual of Buddhist monastics). It was compiled by Paekp'a Kŭngsŏn (白坡 亘璇; 1767–1852), who is also the author of a handbook of the Sŏn school, the *Sŏnmun sugyŏng* (禪門手經), in 1826. The intention of Paekp'a Kŭngsŏn, an influential Sŏn monk, to publish such a comprehensive ritual text is expressed in the preface that he personally wrote. He explains that although the texts specifying the ritual proceedings are not scarce, it is difficult to judge which is accurate and which is not, since each text contains varying contents and procedures.

Before proceeding to the main body, Paekp'a Kŭngsŏn added explanatory notes to assist with the pronunciation of the Chinese characters. On the four corners of each letter, the four tones of the Chinese characters are punctuated with a dot. In writing characters of the Siddham script commonly used for Sanskrit words in East Asia, including Korea, punctuation marks are attached on the left to help pronounce exact tones. Such attention to the correct pronunciation of characters pertains to the religious objective of amplifying the spirituality in chanting during a ritual.

The first volume of the *Chakpŏp kwigam* is divided into the following three parts:

1. the offering ritual directed to the buddhas, bodhisattvas, miscellaneous Buddhist divinities, and deities of the popular faith such as the mountain god;
2. the inviting of the deceased souls to serve food offerings; and
3. the ordination ceremony of monks and nuns.

Except for the third part, the text generally comprises detailed accounts of the ritual procedures and the *gāthās* and *dhāraṇīs* that are associated with the rituals of guiding the deceased to paradise. The second volume deals with various individual rituals such as *chŏmansik*, *iunsik*, and *tabisik* (see above). The two volumes exhaustively treat Buddhist rituals, categorized according to the typological details.

Another notable example of an encyclopedic ritual text is the *Sŏngmun ŭibŏm* (釋門儀範; The Paragon of Buddhist Rituals) compiled by Sŏkch'an (錫贊; dates unknown) in 1935 and still widely used in the Buddhist community of Korea today. The first volume comprises 5 chapters: chapter 1 contains *yegyŏngmun* (禮敬文; words of homage toward the offering altars); chapter 2 consists of *koyumun* (告由文; words informing the buddhas, bodhisattvas, and miscellaneous Buddhist divinities) and *ch'ugwŏnmum* (祝願文; prayers); chapter 3 includes the *gāthās* and mantras recited in various rituals; chapter 4 delineates the proceedings of the offering rituals performed in various worship services and the ritual of guiding the deceased; and chapter 5 consists of *somun* (疏文; words announcing the reason for installing each altar and the opening of the ceremony). As such, the first volume reorganizes the contents of various existing ritual texts categorically. In the second volume, Sŏkch'an made new additions according to the demands of modern times. He particularly asserts the need for advancement in the method of proselytization and the modernization of Buddhist rituals; the proposition includes the publication of Buddhist journals, the translation of scriptures into Korean, the improvement on the structure of worship services, the simplification of funeral rites, and the promotion of a Buddhist-style wedding ceremony.

Furthermore, there is the *Ilp'anjip* (一判集; n.d.; anonymous; Pak, vol. IV, 1993, 121–158) in 25 chapters, presumably produced in the late Chosŏn period, and the *Ch'ŏngmun yojip* (請文要集; The Essentials of Invocation Prayers; Pak, vol. IV, 1993, 579–652), transcribed by Haeun (海運; dates unknown), which is a collection of 63 ritual proceedings used in various rituals frequently performed in the late Chosŏn period.

Mantra Collections

The mantras or *dhāraṇīs* (Kor. *chinŏn* [眞言]) recited in Buddhist rituals are often separately assembled into booklets called *chinŏnjip*. These collections can be considered a type of ritual text.

Among these mantra/*dhāraṇī* collections, the earliest surviving example is the *Odae chinŏn* (五大眞言; Five Great *Dhārāṇis*; Pak, vol. I, 1993, 135–192), published by the order of Queen Dowager Insu (仁粹大妃) in 1485. It is a compilation of five types of *dhāraṇī* most popularly recited in Chosŏn:

1. *taebisim-darani* (大悲心陀羅尼; *dhārāṇi* of great compassionate mind);
2. *sugujŭktŭk-darani* (隨求卽得陀羅尼; *dhārāṇi* of the instant fulfilling of wishes);
3. *taebuljŏng-darani* (大佛頂陀羅尼; *dhārāṇi* of the great *uṣṇīṣa* of Buddha);

4. *puljŏngjonsŭng-darani* (佛頂尊勝陀羅尼; *dhārāṇi* of the triumph of *uṣṇīṣa*); and
5. *kwanseŭmbosalsasibisu-jinŏn* (觀世音菩薩四十二手眞言; *dhārāṇi* of 42 hands of Avalokiteśvara).

At the end of the *Odae chinŏn*, the *Yŏnghŏm yakch'o* (靈驗略抄; Summary of Miraculous Experiences) is appended, explaining the miraculous power of each of the five types of *dhāraṇī* with actual instances. The mantras are written in Siddham characters, Korean transliterations, and Chinese transliterations in order to facilitate recitation – this transcribing system first appeared in the Chosŏn period with the publication of this text. The *kwanseŭmbosalsasipisu-jinŏn* is accompanied by illustrations of the hand gestures (*mudrā*) assumed during the practice, corresponding to the meaning of each mantra. The *taebisim-darani*, also known as *sinmyojanggu-darani* (神妙章句陀羅尼), also constitutes the main body of the *Ch'ŏnsugyŏng* (千手經; Thousand-Armed Avalokiteśvara *Sūtra*), the scripture most widely recited in present-day Korea. It expresses the belief in the possible attainment of enlightenment and miraculous responses by virtue of the benevolence of Avalokiteśvara. The *sugujŭktŭk-darani* was also popularly recited for its exceptional power to immediately realize one's wishes when hearing its incantation. A fair part of the *Odae chinŏn* is concerned with the aspiration for the miraculous power of Avalokiteśvara, which suggests that, in tandem with the popularization of Buddhism in the Chosŏn period, Avalokiteśvara became the most favored Buddhist deity. As with the *Odae chinŏn*, the practice of compiling several popular *dhāraṇī* texts into a single volume was widespread until the late Chosŏn period.

Another 15th-century collection of mantras/*dhāraṇīs* is the *Chinŏn kwŏn'gong* (眞言勸供; *Dhārāṇi* Invocation; Pak, vol. I, 1993, 435–498). Queen Dowager Insu sponsored its publication in 1496 to wish for the peaceful repose of the deceased king Sŏngjong. The Korean master Hakcho (學祖; dates unknown) was appointed to translate the text into Korean, thus the mantras recited in various rituals are written in both Chinese and Korean characters. The ritual text called *Samdan sisik mun* (三壇施食文; Writing on the Food-offering Ritual of Three Altars) is appended at the end. This is an example that alludes to the practice of combining the mantra/*dhāraṇī* collection and the ritual text into a single volume and evidence for their intimate association.

Another type of the mantra/*dhāraṇī* collection borrows its subheadings from the specific names of the ritual texts of *suryukchae*, such as *Kyŏlsumun*, *Chibanmun*, *Chagimun*, and *Chŏmanmun*, with mantras selected from these *suryukchae* texts and *dhāraṇī* s from other *dhāraṇī sūtras* incorporated. The earliest surviving text is the *Chinŏnjip* dated to 1569. It begins with the *Puljŏngsim-darani*, *Hongmuun jamojido* (洪武韻字母之圖; The Illustration of Consonants and Vowels according to the Correct Rhymes of the Hongwu Reign), *Ŏnbon simyukchamo* (諺本十六字母; Sixteen consonants and Vowels of the Korean Alphabet), *Pŏmbon oshipchamosildamjang* (梵本五十字母悉曇章; The Chapter on Fifty Characters of the Siddham Script) and *Sugu-darani* (隨求陀羅尼; *Dhārāṇi* Pursuing Wishes), then proceeds to the *Kyŏlsumum*, *Chibanmun*, *Chagimun*, and *Chŏmanmun*, followed by the *Jŏngbon nŭngŏmju* (正本楞嚴呪; Correct Version of *Dhārāṇis* of the *Laṅkāvatārasūtra*), *Puljŏngsim Kwanseŭmbosalmo-darani* (佛頂心觀世音菩薩姥陀羅尼; *Dhārāṇi* of the Mother of Avalokiteśvara of the Mind of the Buddha's *Uṣṇīṣa*), *Yongsibosal-darani* (勇施菩薩陀羅尼; *Dhārāṇi* of the Bodhisattva Demonstrating Courage), and *Chegyŏng chinŏn* (諸經眞言; *Dhārāṇi* of Diverse *Sūtras*). These collections containing only mantras/*dhāraṇīs* were especially produced to help laypeople during the ritual ceremony to easily follow the mantras written in Siddham characters (Nam, 2000, 67–105).

Despite the minute differences in their contents and types, the style of the diverse editions of these mantra/*dhāraṇī* collections is generally identical. Yet variations are discernible in their method of transcription: some are transcribed in a combination of Siddham characters and Korean and Chinese transliterations, and others only in Korean or Chinese characters; at times, a single volume adopts varying transcriptions depending on the type of mantras/*dhāraṇī*. Indeed, Siddham characters were employed presumably to amplify the mystical nature of the mantra/*dhāraṇī*, while the Korean alphabets allowed anyone to easily read and practice incantations. This development reflects the tendency of its promulgation to be directed principally to the general public who were illiterate in Chinese characters (Hong, 1986, 425).

Tantric Ritual Manuals in East Asia

Ritual in the form of simple acts of ritualized behavior – for example circumambulation of a *stūpa* or offerings of flowers – has a long history in Buddhism. While this form of ritualized behavior was also performed by practitioners of esoteric or Tantric Buddhism, ritual as one of the hallmarks of esoteric Buddhism refers not so much to such single acts of ritualized behavior as to a systematically organized and structured set of activities that has been regularized to some degree. The majority of works of esoteric Buddhism deal in some way or another with this kind of ritual practice, but some of these works – for example *sūtras* and *tantras* – are not normally classified as ritual "manuals" since the rites are embedded in a scriptural framework. In fact, it is quite difficult to determine what exactly is to be regarded as a ritual manual.

Ritual, in the sense of a set of ritualized actions, evolved by combining discrete acts of ritualized behavior into a meaningful whole. It is sometimes possible to trace in Chinese translations the process whereby a particular ritual became increasingly complex and the instructions increasingly detailed through the incorporation of an ever-greater number and variety of liturgical procedures into the ritual process in a manner similar to the embedding or nesting of independent rites in a larger ritual structure as described by F. Staal with reference to Vedic ritual. For example, simple ritual practices involving the offering of flowers and candles before a Buddha image and the reciting of incantations (*dhāraṇī*) are already recorded in the *Puṣpakūṭadhāraṇī* (T. 1356), first translated in the first half of the 3rd century, and it is possible to trace in subsequent translations of this work (T. 1357–1359), the last produced in 988, how the instructions for image worship became increasingly detailed. But in this case, as in many other examples of so-called *dhāraṇī* scriptures (see Copp, 2011), the ritual directives are embedded within the traditional framework of a *sūtra*, and despite the presence of ritual instructions such works can hardly be regarded as ritual manuals.

The present survey therefore, for the sake of simplicity, by and large excludes works possessing some of the formal characteristics of a scripture, focusing instead on works pertaining to esoteric Buddhist ritual practice that give sequential instructions, in varying degrees of detail, intended to guide a practitioner in the actual performance of a rite, and that were translated into Chinese, or occasionally composed by Chinese authors, from about the 6th to the 11th century. Thus some works that, judging from their titles alone, might be assumed to be ritual manuals, as well as compendia of sundry mantras, have been left out of consideration. Likewise, manuals for rites that, though based on esoteric scriptures, are exoteric in character have also been omitted.

General Manuals

Perhaps the earliest work that might be properly described as a ritual manual is the **Dhāraṇīsaṃgraha* (*Tuoluoni ji jing* [陀羅尼集經]; T. 901; see van Gulik, 1935, 56–75; Smet, 1989; Strickmann, 1996, 133–136, 146–163; Davidson, 2012; Shinohara, 2014, 28–88, 205–225), a collection of rituals compiled and translated by Atikūṭa in 653–654. Prior to this, we find several anthologies of *dhāraṇī* scriptures (T. 1331–1337) from about the late 4th century to the first half of the 6th century that describe simple, protective, therapeutic, and apotropaic rites involving chiefly, but not exclusively, the recitation of spells, which often consist simply of the names of spirits. (On T. 1331, the *Guanding jing* [灌頂經], see Strickmann, 1990; 1996, 78–87, 114–123, 330–336; 2002, 113–119, 132–140; 2005, 58–75; on T. 1332, the *Qifo bapusa suoshuo datuoluoni shenzhou jing* [七佛八菩薩所說大陀羅尼神呪經], see Strickmann, 1996, 73–76; Silk, 2008, 376–378; Shinohara, 2014, 4–14; and on T. 1336, the *Tuoluoni zaji* [陀羅尼雜集], see Strickmann, 1996, 76–78, 141–142; 2002, 106–107; Silk, 2008; Shinohara, 2014, 4–14.) However, the *Dhāraṇīsaṃgraha* was the first such compendium to describe rites, dedicated to a variety of deities, that integrated in a more systematic fashion the standard elements of esoteric practice: hand gestures (*mudrā*), mantras, fire offerings (*homa*), *maṇḍalas*, and so on.

In addition to compendia of miscellaneous rites such as the *Dhāraṇīsaṃgraha*, more general works describing rites that could be adapted to different situations were also produced. One of these,

ompendia of miscellaneous rites
nīsaṃgraha, more general works
at could be adapted to differ-
e also produced. One of these,

taking a scriptural format, is the *Susiddhikarasūtra* (*Suxidijieluo jing* [蘇悉地羯囉經]; T. 893; KYIK, Mikkyō-bu 5; SKYDK, Mikkyō-bu 2), translated into Chinese by Śubhākarasiṃha (Shanwuwei [善無畏]) in 726 (for an English translation, see Giebel, 2001). In India and Tibet, this work later came to be classified as a general *tantra*, and it provides perhaps the most comprehensive description of the basic ritual practices associated with early esoteric Buddhism.

The word *susiddhikara* means "good at producing success," and the *Susiddhikarasūtra* could be said to set forth the general rules for creating conditions conducive to success (*siddhi*). These rules range from guidelines for choosing one's teacher or disciples, the ritual site, and propitious times for performing different rites to detailed lists of offerings and ritual directions for bathing, reciting mantras, making offerings, performing *homa*, invoking and worshipping deities, ritually empowering certain objects, and constructing a *maṇḍala*. A salient feature of the *Susiddhikarasūtra*, reflecting the fact that it is classified as a general *tantra*, is that it is underpinned by the ternary system characteristic of early esoteric Buddhism. Thus not only are deities divided into the three *buddha*, *padma*, and *vajra* families, but rites are also broadly divided into three standard types (*śāntika*, for alleviating calamities and misfortunes; *pauṣṭika*, for increasing health and prosperity; and *ābhicāruka* [or *abhicāraka*] for overcoming adversaries). Likewise success is measured in terms of three grades (higher, middling, and lower), with each grade being subdivided into three further grades. The three families of deities and three types of rites are sometimes similarly ranked in three grades. In line with the generic character of the *Susiddhikarasūtra*, for some rites separate mantras are given for each of the three families of deities, the one to be used in a particular situation being determined by the affiliation of the deity being invoked at the time.

It is thus clear that the *Susiddhikarasūtra* was intended as only a general guide. Perhaps for this reason, the need arose for a manual that arranged the directions scattered across the many chapters of the *Susiddhikarasūtra* into a coherent ritual program that could be easily followed by a practitioner. One such manual is the *Susiddhikarasādhanasaṃgraha*, attributed to the 8th-century Varabodhi and preserved in Tibetan (*Legs par grub par byed pa'i sgrub pa'i thabs bsdus pa*; D 3066/P 3890), while in Chinese there is the *Suxidijieluo gongyang fa* (蘇悉地羯羅供養法; *Susiddhikara* Worship Method; T. 894), a more comprehensive ritual manual that was translated or possibly composed by Śubhākarasiṃha. It provides full details for the performance of deity worship, starting with preparation of the site, and adds ritual actions not mentioned in the *Susiddhikarasūtra* as well as including descriptions of the *mudrās* to be employed, which are missing in the *Susiddhikarasūtra*.

Mention may also be made of the *Yaoshi yigui yiju* (藥師儀軌一具; Complete Ritual Manual for Bhaiṣajyaguru; T. 924C), which, according to the colophon, was brought to Japan by the Tendai master Saichō (最澄) in 805, although the historicity of this claim has been questioned. It is ostensibly a manual for a rite dedicated to Bhaiṣajyaguru, but as it makes no mention of Bhaiṣajyaguru and draws extensively on the *Susiddhikarasūtra* and *Suxidijieluo gongyang fa*, it is best regarded as a more general ritual manual incorporating elements from the *Susiddhikara* cycle.

Another work that covers similar ground to the *Susiddhikarasūtra* is the *Subāhuparipṛcchātantra* (*Tantra* of the Questions of Subāhu), translated twice into Chinese, first in 726 by Śubhākarasiṃha as the *Supohu tongzi qingwen jing* (蘇婆呼童子請問經; T. 895; KYIK, Mikkyō-bu 2; SKYDK, Mikkyō-bu 2; Bonneux, 1991) and again in 987 by Fatian (法天) as the *Miaobi pusa suowen jing* (妙臂菩薩所問經; T. 896). As is suggested by the title, the *Subāhuparipṛcchā* takes the form of a dialogue in which Vajrapāṇi replies to questions posed by Subāhu about various aspects of ritual practice. Some of the more unusual topics dealt with in this work include cemetery-based *vetāla* ("vampire") practices, the ritual use of corpses, and oracular possession employing child mediums (see Strickmann, 2002, 211–218). In contrast to the three families of deities in the *Susiddhikarasūtra*, the *Subāhuparipṛcchā* mentions four: the *padma*, *vajra*, *maṇi*, and *pāñcika* families (the last being associated with the *yakṣa* general Pāñcika).

A shorter work dealing with several aspects of ritual practice is the **Vinayasūtra* (*Pinaye jing* [毘奈耶經]; *Sūtra* of Monastic Rules; T. 898; KYIK, Mikkyō-bu 2), predating 805 CE, when it was first brought to Japan by Saichō. As is suggested by the title, there is an emphasis on the inner and outer purity of the practitioner, and in addition to instructions for worshipping one's mantra deity, considerable space is devoted to oneiromancy (interpretation of dreams) as well as the dangers posed by *vināyakas* (a type of demon that can obstruct the efficacious performance of a ritual) and how to avert them (see Strickmann, 1996, 311–316).

Whereas the *Susiddhikarasūtra*, *Subāhuparipṛcchā*, and **Vinayasūtra* all have the basic format of a *sūtra*, a manual in the true sense of the term, its title notwithstanding, is the *Sarvamaṇḍalasāmānyavidhiguhyatantra* (Secret *Tantra* of Rules Common to All *Maṇḍalas*), called simply in the Chinese translation attributed to Amoghavajra (Bukong [不空]) the *Ruixiye jing* (蕤呬耶經; *Guhyasūtra* [Secret *Sūtra*]; T. 897; KYIK, Mikkyō-bu 2; SKYDK, Mikkyō-bu 7). The Chinese translation is divided into 11 chapters and is written entirely in prose, whereas the Tibetan translation (*Dkyil 'khor thams cad kyi spyi'i cho ga gsang ba'i rgyud*; D 806/P 429) is in verse and has no chapter divisions. As is implied by its title preserved in the Tibetan translation, it sets out "rules common to all *maṇḍalas* (*sarvamaṇḍalasāmānyavidhi*)," specifically the rites for constructing an initiation *maṇḍala* over a period of seven days and for initiating a disciple into the *maṇḍala* once it has been constructed (see Shinohara, 2014, 148–154). Apart from the actual construction of the *maṇḍala* and initiation rites, it also covers matters such as the attributes of an *ācārya*, the qualifications of an initiand, and the selection of the proper site and time for constructing a *maṇḍala*. While the *Susiddhikarasūtra* described several smaller *maṇḍalas*, the *maṇḍala* described in the *Guhyasūtra*/*Guhyatantra* is of a comparatively large scale, although there are some differences between the Chinese and Tibetan translations regarding its composition (see Takata, 1970).

Vairocanābhisaṃbodhisūtra and Associated Manuals

The most important text in the entire canon of East Asian esoteric Buddhism in terms of its overall influence was probably the *Vairocanābhisaṃbodhisūtra* (*Dapiluzhena chengfo shenbian jiachi jing* [大毘盧遮那成佛神變加持經]; T. 848; KYIK, Mikkyō-bu 1; SKYDK, Mikkyō-bu 1), translated by Śubhākarasiṃha and his Chinese disciple Yixing (一行; 683–727) in 724–725 (for an English translation, see Giebel, 2005). The Chinese translation consists of 36 chapters, with the final five chapters constituting a worship manual (*pūjāvidhi*) that is preserved as a separate work in the Tibetan canon (*Mahāvairocanābhisaṃbodhisaṃbaddhapūjāvidhi* [*Rnam par snang mdzad chen po mngon par byang chub par gtogs pa'i rgyud kyi mchod pa'i cho ga*]; D 2664/P 3488).

For the most part, the *Vairocanābhisaṃbodhisūtra* takes the form of a dialogue between Vajrapāṇi and the buddha Vairocana, and broadly speaking it can be divided into an introductory chapter, dealing chiefly with matters of doctrine, and the remaining chapters, describing in detail a variety of practices, including the construction of a *maṇḍala*, initiation rites, mantra recitation, *mudrās*, visualization techniques, and various attainments (*siddhi*). However, there are inconsistencies and duplication in the content of some of the chapters, and the instructions for ritual procedures are scattered across various chapters and have not been arranged in a manner suitable for their application to actual practice. This shortcoming is partly compensated for by the five-chapter worship manual appended to the Chinese translation.

In addition, ritual programs based on this text are presented more systematically in four lengthy ritual manuals, two attributed to Śubhākarasiṃha (T. 850, 851) and two composed by Faquan (法全) in the mid-9th century (T. 852, 853; see Hunter, 2001). Furthermore, the meditation on the letter *A* and the other letters of the Sanskrit syllabary and their allocation to different parts of the body, described with extreme succinctness in chapters 16 and 17 of the *Vairocanābhisaṃbodhisūtra*, are elaborated on in the *Dapiluzhena jing asheli zhenshizhi pin zhong asheli zhu azi guanmen* (大毘盧遮那經阿闍梨真實智品中阿闍梨住阿字觀門; Method of Visualization whereby the *Ācārya* Abides in the Letter *A* in the Chapter "True Knowledge of the *Ācārya*" of the *Mahāvairocanasūtra*; T. 863) composed in 836 by Weijin (惟謹) with reference to Yixing's commentary on the *Vairocanābhisaṃbodhisūtra* (T. 1796).

The Taishō canon contains several other manuals associated with the *Vairocanābhisaṃbodhisūtra*, some of which are preserved only in Japanese manuscripts, and their provenance is therefore uncertain. The *Dapiluzhenafo shuo yaolüe niansong jing* (大毘盧遮那佛說要略念誦經; Abridged Recitation *Sūtra* Expounded by the Buddha Mahāvairocana; T. 849; SKYDK, Mikkyō-bu 7), thought to have been translated probably in the late 8th to early 9th century, is similar in content to the worship manual constituting the final five chapters of the Chinese translation of the *Vairocanābhisaṃbodhisūtra*, while the *Dari jing chisong cidi yigui* (大日經持誦次第儀軌; Ritual Manual of Sequential Procedures for

Recitation in the *Mahāvairocanasūtra*; T. 860) is similar in content to the final four chapters. The *Qinglongsi gui ji* (青龍寺軌記; Notes on the Qinglong Temple Manual; T. 855) lists, with some comments, the ritual procedures for a rite based on the *Vairocanābhisaṃbodhisūtra*, but despite its title, it does not appear to be based on Faquan's abovementioned manual (T. 853; KYIK, Mikkyō-bu 3), commonly known as the *Qinglong Temple Ritual Manual* (*Qinglongsi yigui* [青龍寺儀軌]). The *Gongyang yishi* (供養儀式; Worship Ritual; T. 859) presents a set of instructions for worship, starting with the selection of a site, and includes illustrations of the *mudrās* to be employed. Two shorter manuals, the *Dapiluzhena chengfo shenbian jiachi jing lüeshi qizhi niansong suixing fa* (大毘盧遮那成佛神變加持經略示七支念誦隨行法; Adaptable Method of Seven-Limbed Recitation Abridged from the *Mahāvairocanābhisaṃbodhivikurvitādhiṣṭhānasūtra*; T. 856; KYIK, Mikkyō-bu 2) and the *Dari jing lüeshe niansong suixing fa* (大日經略攝念誦隨行法; Adaptable Method of Recitation Abridged from the *Mahāvairocanasūtra*; T. 857), both said to have been translated into Chinese by Amoghavajra and brought to Japan by the Shingon patriarch Kūkai (空海) in 806, describe "seven-limbed" and "five-limbed" recitation respectively, and the *Piluzhena wuzi zhenyan xiuxi yigui* (毘盧遮那五字眞言修習儀軌; Ritual Manual for Practicing the Five-Syllable Mantra of Vairocana; T. 861), also attributed to Amoghavajra and brought to Japan by the Tendai pilgrim-scholar Ennin (圓仁) in 847, describes a rite of deity yoga for union with Vairocana.

Sarvatathāgatatattvasaṃgraha and Associated Manuals

While the *Vairocanābhisaṃbodhisūtra* was of paramount importance in East Asian esoteric Buddhism, of far greater importance in the history of Indian and Tibetan Tantric Buddhism was the *Sarvatathāgatatattvasaṃgraha*, a voluminous work that describes a total of 28 *maṇḍalas* and various associated rites. Chapter 1 of part 1 was translated into Chinese by Amoghavajra in circa 754 (T. 865; KYIK, Mikkyō-bu 2; SKYDK, Mikkyō-bu 4; for an English translation, see Giebel, 2001), while a full translation by Dānapāla was completed only in 1015 (T. 882). However, its ritual cycle was first introduced to China by Vajrabodhi (Jingangzhi [金剛智]) in the form of the *Jingangding yuqie zhong lüechu niansong jing* (金剛頂瑜伽中略出念誦經; Recitation *Sūtra* Excerpted from the Yoga of the *Vajraśekhara*; T. 866; KYIK, Mikkyō-bu 1), translated in circa 723. Rather than being a translation from the *Sarvatathāgatatattvasaṃgraha* as it is known today, it appears to be a manual based on part 1, and in content it covers propaedeutics for initiation, details of the *vajradhātumaṇḍala*, initiation, *homa*, and so on. Vajrabodhi also translated the *Jingangding jing yuqie xiuxi Piluzhena sanmodi fa* (金剛頂經瑜伽修習毘盧遮那三摩地法; Ritual for Practicing the *Samādhi* of Vairocana in the Yoga of the *Vajraśekharasūtra*; T. 876; KYIK, Mikkyō-bu 2; SKYDK, Mikkyō-bu 6), a more compact manual for a meditative ritual based on the *Sarvatathāgatatattvasaṃgraha*, much of which is reprised in the latter part of the *Niansong jiehu fa putong zhubu* (念誦結護法普通諸部; Method of Recitation and Protection, Common to All Divisions; T. 904; KYIK, Mikkyō-bu 2). Said to have been conferred by Vajrabodhi on initiated disciples and brought to Japan in 839 by Kūkai's disciple Engyō (圓行; 799–852), this compendium begins with a ritual program for performing mantra recitation, and touches on general rules of conduct as well as giving instructions for constructing and visualizing a *maṇḍala*. A fuller, systematically arranged ritual program of post-initiatory practice based on part 1 of the *Sarvatathāgatatattvasaṃgraha* is provided by two similar works translated by Amoghavajra (T. 873, 874 [SKYDK, Mikkyō-bu 7]), the latter of which shows evidence of some augmentation when compared with the former. The existence of a ritual tradition slightly different from that transmitted by Vajrabodhi and Amoghavajra is suggested by the mantras given in the *Jingangding jing Piluzhena yibaiba zun fashen qiyin* (金剛頂經毘盧遮那一百八尊法身契印; *Mudrās* of the *Dharmakāya* [Vairocana and 108 Deities] of the *Vajraśekharasūtra*; T. 877), the translation of which is attributed to Śubhākarasiṃha and Yixing and which must predate 806, when it was brought to Japan by Kūkai.

Apart from these ritual texts intended to provide guidelines for the actual performance of rites based directly on the *Sarvatathāgatatattvasaṃgraha*, many of the meditational liturgies, or *sādhanas*, produced by Amoghavajra and his heirs incorporate and adapt ritual elements from the *Sarvatathāgatatattvasaṃgraha*, sometimes combining them with elements from the *Vairocanābhisaṃbodhisūtra*, resulting in what some Japanese scholars refer to as ritual manuals of combined practice (*gōgyō giki* [合行儀軌]). The process of adaptation can be seen perhaps most clearly in the way in which the *pañcākārābhisaṃbodhikrama*, the five-stage process whereby the bodhisattva

Sarvārthasiddhi attains awakening at the start of the *Sarvatathāgatatattvasaṃgraha*, was adapted in about 20 *sādhanas* purportedly translated primarily by Amoghavajra, but also by Śubhākarasiṃha and Vajrabodhi, with the mantras and visualizations being modified to match the deity with whom the practitioner is meant to achieve ritual identification – for example Lokeśvararāja (T. 931, 932), Avalokiteśvara (T. 1030, 1031, 1056), Tārā (T. 1102), Hayagrīva (T. 1072), Cakravarticintāmaṇi (T. 1086, 1087), and Mañjuśrī (T. 1171, 1173–1175).

Although the *Guhyasamājatantra* and several other scriptures of later Tantric Buddhism were transmitted to China during the Song dynasty, very few ritual manuals reflecting post-*Sarvatathāgatatattvasaṃgraha* developments seem to have been translated. A rare example of such a manual is the *Miaojixiang pingdeng yuqie mimi guanshen chengfo yigui* (妙吉祥平等瑜伽祕密觀身成佛儀軌; Ritual Manual for Secret Self-Visualization and Attainment of Buddhahood in Mañjuśrī's Yoga of Sameness; T. 1193), a manual for a meditative ritual translated by Cixian (慈賢; 10th cent.) that is based on the *Miaojixiang pingdeng mimi zuishang guanmen dajiaowang jing* (妙吉祥平等祕密最上觀門大敎王經; *Sūtra* of the Secret and Supreme Method of Visualization in the Sameness of Mañjuśrī, Being the Great King of Teachings; T. 1192), also translated by Cixian, and belongs to the Guhyasamāja cycle.

Initiation Manuals

The most dramaturgic of all esoteric Buddhist rituals is probably that of initiation (*abhiṣeka*), a rite of passage that was required of a prospective practitioner in order to be authorized to perform the ritual practices of a particular esoteric tradition. The rites of initiation, usually involving induction into a *maṇḍala*, are described in detail in texts such as the *Vairocanābhisaṃbodhisūtra*, *Guhyatantra*, and *Sarvatathāgatatattvasaṃgraha*, but very few initiation manuals per se are found in the Chinese Buddhist canon.

The selection of a suitable site and the construction of the *maṇḍala* are dealt with in the *Jianli mantuluo ji jianze ji fa* (建立曼荼羅及揀擇地法; Method for Constructing a *Maṇḍala* and Selecting a Site; T. 911; KYIK, Mikkyō-bu 3), compiled by Huilin (慧琳; 737–820) and largely based on the *Subāhuparipṛcchā*, *Susiddhikarasūtra*, *Guhyatantra*, and *Vairocanābhisaṃbodhisūtra*. Another work, the *Fantian zedi fa* (梵天擇地法; Brahmā's Method for Selecting Sites; T. 910), describes 42 kinds of sites suitable not only for constructing a *maṇḍala* but also for undertaking other types of practice. Purportedly based on the *Dafantianwang nei mimi jing* (大梵天王内祕密經; *Sūtra* of the Inner Secrets of Mahābrahmarāja), it must predate 805, when it was brought to Japan by Saichō. The *Jianli mantuluo humo yigui* (建立曼荼羅護摩儀軌; Ritual Manual for Constructing a *Maṇḍala* and [Performing] *Homa*; T. 912; KYIK, Mikkyō-bu 2), said to have been compiled by Faquan, briefly describes the construction of a *maṇḍala* over seven days and then deals in detail with various aspects of *homa*, including the distinction between inner and outer *homa*, four kinds of *homa*, and signs of success in achieving the objectives of the *homa* rite.

There are also manuals for *maṇḍala* rites associated with specific deities or texts, including the *Dinglunwang damantuluo guanding yigui* (頂輪王大曼荼羅灌頂儀軌; Ritual Manual for Initiation into the Great *Maṇḍala* of Cakravartin; T. 959), apparently composed by the Javanese monk Bianhong (辯弘; *fl.* late 8th cent.), and the *Dasheng guanxiang mannaluo jing chu'equ jing* (大乘觀想曼拏羅淨諸惡趣經; Mahāyāna *Sūtra* for Visualizing the *Maṇḍala* and Purifying Evil Destinies; T. 939), translated by Faxian in 996. The latter is a translation of Ānandagarbha's *Sarvadurgatipariśodhanamaṇḍalavidhi* (*Ngan song thams cad yongs su sbyong ba'i dkyil 'khor gyi cho ga*; D 2635/P 3460; see Inui 1989), a manual for *maṇḍala* rites associated with the *Sarvadurgatipariśodhanatantra* (which was not translated into Chinese).

Not only did *homa* usually form part of an initiation rite, but it was also performed separately for a variety of purposes, and several *homa* manuals are preserved in the Chinese canon. Two translated by Amoghavajra bear the same title *Jingangding yuqie humo yigui* (金剛頂瑜伽護摩儀軌; *Homa* Manual of the Yoga of the *Vajraśekhara*; T. 908 [KYIK, Mikkyō-bu 2], 909) but differ slightly in content, and the opening sections of both tally with a passage in the second half of the *Vajraśekharamahāguhyayogatantra* preserved in Tibetan translation (*Gsang ba rnal 'byor chen po'i rgyud rdo rje rtse mo*; D 480/P 113). These two manuals differentiate five kinds of *homa* rites – *śāntika, pauṣṭika, abhicāraka, ākarṣaṇa* (for attracting others), and *vaśīkaraṇa* (for gaining control over others) – and in these and other manuals various elements of the ritual, such as the size and shape of the fire pit, the types and length of the firewood, the colors of sundry accoutrements, and the articles (oil, ghee, grains, fruit, incense, etc.) offered

into the fire, are customized accordingly. Another *homa* manual is the *Huohong gongyang yigui* (火吽供養儀軌; *Homa* Worship Manual; T. 913), attributed to Śubhākarasiṃha and predating 806. It mentions four kinds of *homa* – *śāntika, pauṣṭika, abhicāraka*, and *piṅgala* – the last of which corresponds to *vaśīkaraṇa*. Of uncertain provenance is the *Huohong gui bielu* (火吽軌別錄; Supplement to the *Homa* Manual; T. 914), which purports to be a supplement to the *Huohong gongyang yigui*. It is a miscellany of ritual instructions, not all of which are directly related to *homa*, and also includes glosses on a number of terms appearing in the *Huohong gongyang yigui*. In addition, there are two manuals for *homa* rites associated with the cult of the Big Dipper (*beidou* [北斗]; T. 1306 [Orzech & Sanford, 2000, 393–395], 1310). An example of a *homa* manual of later times is one translated by Cixian (T. 1194), again affiliated to the Guhyasamāja cycle, which describes four kinds of *homa* rites, namely *śāntika, pauṣṭika, vaśīkaraṇa*, and *abhicāraka*.

During the course of initiation, the initiand receives the precepts, and this phase of initiation rites is covered in three texts (T. 915–917). The most detailed of these is the *Wuwei sanzang chanyao* (無畏三藏禪要; Trepiṭaka Śubhākarasiṃha's Essentials of Meditation; T. 917; KYIK, Mikkyō-bu 3; SKYDK, Mikkyō-bu 7), a record, edited in two stages, of part of some discussions that Śubhākarasiṃha had with the Chan monk Jingxian (敬賢) sometime between 716 and 735 (for an English translation, see Bagchi, 1945; for a Dutch translation, see Pinte, 2004). The first half deals with the precepts to be received by an initiand, while the second half provides detailed instructions on meditation practices centered on visualization of a lunar disk (*candramaṇḍala*), based on the *Sarvatathāgatatattvasaṃgraha*. The *Shou putixin jie yi* (受菩提心戒儀; Rite for Receiving the *Bodhicitta* Precepts; T. 915; KYIK, Mikkyō-bu 3; SKYDK, Mikkyō-bu 4), supposedly translated by Amoghavajra, and the *Shou wujie bajie wen* (受五戒八戒文; Text for Receiving the Five Precepts and Eight Precepts; T. 916) must both predate 806, when they were brought back to Japan by Kūkai. Both of these texts give the words (and mantras in the case of the former) to be recited by an initiand when receiving the precepts; the final third of the former overlaps with part of the *Wuwei sanzang chanyao* and appears to have been added after the text's initial translation.

An initiation rite for being installed as an *ācārya* is described in the *Asheli damantuluo guanding yigui* (阿闍梨大曼荼攞灌頂儀軌; Ritual Manual for Initiation of an *Ācārya* in the Great *Maṇḍala*; T. 862; KYIK, Mikkyō-bu 2). Two passages seem to have been quoted from the *Vairocanābhisaṃbodhisūtra*, while the greater part is drawn from the aforementioned *Jingangding yuqie zhong lüechu niansong jing* (T. 866), translated by Vajrabodhi. Since there is no mention of it in either Chinese catalogues or early Japanese catalogues, there is a possibility that it was compiled in Japan.

Other Ritual Manuals

The most numerous among the various kinds of ritual manuals preserved in Chinese are those that give instructions for the meditative rituals (*sādhanas*) to be performed by a practitioner, usually on a daily basis, once he has been initiated. These manuals vary considerably both in the complexity of the ritual described and in the amount of detail provided to guide the practitioner in its performance. Examples of generic ritual programs for this purpose are found in some of the works mentioned above, but there are also many texts that provide instructions for ritualized meditation centered on a particular deity or group of deities. The basic structure of such rites is often explained in terms of a guest-host paradigm in which the practitioner, acting as host, treats the deity as an honored guest whom he petitions for a variety of goals or with whom he seeks to gain ritual identification. A template for such ritual practice is provided by the *Shiba qiyin* (十八契印; Eighteen *Mudrās*; T. 900), a work of uncertain authorship and provenance that has been traditionally attributed to Kūkai's teacher Huiguo (惠果; 746–805) and has become the basis of ritual practice in the Shingon school of Japan; it gives detailed instructions for 18 basic ritual procedures, covering the *mudrā*, visualization, and mantra for each (see Payne, 1991, 207–227; Sharf, 2003).

This sequence of 18 ritual procedures seems to represent a systemization of a ritual pattern found in several ritual manuals purportedly translated by Amoghavajra, in particular the *Wuliangshou rulai guanxing gongyang yigui* (無量壽如來觀行供養儀軌; Ritual Manual for Visualization Practice and Worship of Tathāgata Amitāyus; T. 930) and the *Guanzizai pusa ruyilun niansong yigui* (觀自在菩薩如意輪念誦儀軌; Recitation Manual for the Bodhisattva Cakravarticintāmaṇi Avalokiteśvara; T. 1085; see Shinohara, 2014, 168–193). A similar sequence of rites can be seen in many other *sādhanas*, albeit in forms that have been modified to suit the purpose of the rite, and, as already mentioned, some manuals follow templates that are more closely based on the *Sarvatathāgatatattvasaṃgraha* or combine elements from both the *Vairocanābhisaṃbodhisūtra* and the *Sarvatathāgatatattvasaṃgraha*. Manuals for such meditational liturgies have been preserved for a great variety of deities, including, in addition to the above two, Akṣobhya (T. 921); Lokeśvararāja (T. 931, 932); Bhaiṣajyaguru (T. 922, 923, 928); Avalokiteśvara and the *padma* family (T. 1030–1032, 1041); Sahasrabhujasahasranetra Avalokiteśvara (T. 1056, 1066); Tārā (T. 1102); Nīlakaṇṭha (T. 1112); Cakravarticintāmaṇi (T. 1086, 1087); Mañjuśrī (T. 1174, 1175); Vajrasattva/Samantabhadra (T. 1119 [see Astley-Kristensen, 1988], 1120–1124, 1125 [SKYDK, Mikkyō-bu 6]); Vajrarāja (T. 1132); Ākāśagarbha (T. 1146); Prajñāpāramitā (T. 1151); Cakravartin (T. 948); Ekākṣaracakravartin/Ekākṣaroṣṇīṣacakravartin (T. 949, 957 [KYIK, Mikkyō-bu 5; SKYDK, Mikkyōbu 6]); Sitātapatra (T. 975); Trailokyavijaya (T. 1209); Amṛtakuṇḍalin (T. 1211); Yamāntaka (T. 1219); Vajrakumāra (T. 1223, 1224); Ucchuṣma (T. 1225); Mahācakravajra (T. 1231); Padanikṣepa (T. 1232); Vaiśravaṇa (T. 1249); Mārīcī (T. 1258, 1259); Gaṇeśa (T. 1266 [Sanford, 1991, 291–293], 1270, 1272–1275 [the last of which is translated in Duquenne, 1988, 346–352]); Yama (T. 1290); the ten *rākṣasīs* of the *Lotus Sūtra* (T. 1292); and the eight, ten, and twelve *lokapālas* (T. 1295, 1296, 1298). In addition, there are also manuals for rites dedicated to a particular text rather than a deity; texts treated in this manner include the *Lotus Sūtra* (T. 1000; SKYDK, Mikkyō-bu 6), *Renwang jing* (仁王經; T. 994, 995 [see Orzech, 1998, 176–191]), *Anantamukhanirhāradhāraṇī* (T. 1010), and *Uṣṇīṣavijayādhāraṇī* (T. 972).

Most of the above texts may be regarded as *sādhanas* in a broad sense of the term, but there are also manuals describing a more extensive range of rites centered on a particular deity. Examples of this type of more comprehensive ritual manual include manuals for rites associated with Maitreya (T. 1141), Cakravarticintāmaṇi (T. 1089), Acalanātha (T. 1202), Vaiśravaṇa (T. 1246), and Jambhala (T. 1284).

In addition to the rites covered in the manuals described so far, rites were also performed for more secular purposes as the occasion demanded. The aims of these rites are broadly hinted at by the names of the various categories into which rites were traditionally classified, such as *śāntika*, *pauṣṭika*, and *abhicāraka*. Instructions for performing such rites can be found in many texts of esoteric Buddhism, but manuals dealing with specific rites of this type are relatively few in number in the Chinese canon. They include a manual for a rainmaking rite based on the *Mahāmeghasūtra* (T. 990), a manual for achieving invisibility (*antardhāna*; T. 955), a manual on Gāruḍa medicine, specifically the treatment of snakebites (T. 1278), and manuals for the ghost-feeding rites performed during the Chinese ghost festival (*yulanpen* [盂蘭盆]; T. 1315, 1320; see Orzech, 1994).

Chan Literature

Defining the Category

It is reasonable to reserve the designation "Chan literature" for literary genres that were unique to, or at least invented by and characteristic of, the Chan (禪) school of Buddhism in China. That definition is scarcely controversial, and precedents for it can be found in Chinese historical records dating from as far back as the 9th century. However, there is no consensus among modern scholars as to what kind of movement the Chan school was when it first took shape in China, or which writings satisfy the aforementioned criteria for classification as Chan texts, and such disagreement itself has a long history. This first section is dedicated, therefore, to: (1) a survey of past and present ideas about the scope of Chan literature; and (2) an explanation of the definition and typology of Chan literature employed in the present article.

Conceptions of Chan Literature, Past, and Present

By the 5th century CE at least, Chinese Buddhists had come to use the expression "*dhyāna* scriptures" (*chanjing* [禪經]) to refer to what they believed to be a distinct class of texts, compiled in India, that focused specifically on meditation and contained detailed instructions for its practice. The idea that *dhyāna* scriptures constituted a genre of works either preached by the Buddha himself or compiled by Indian commentators in the centuries after his death was widespread in China by that time, although it did not have any clear precedent in the Buddhism of India or Central Asia (Greene, 2012, 30–40).

> Despite the apparent absence of an Indic Buddhist parallel for it, the notion of a genre of canonical or near-canonical texts devoted to *chan* captured the Chinese imagination from an early date, and in addition to "*chan* scriptures" (*chanjing* [禪經] we find related terms such as "the *chan* canonical texts" (*chandian* [禪典]), and the "basket [pertaining to] meditation" (*dingzang* [定藏]). (Greene, 2012, 32–33)

Texts that were typically categorized as *dhyāna* scriptures included works said to have been translated by An Shigao (安世高; *fl.* 2nd cent.), such as the *Anban shouyi jing* (大安般守意經; *Sūtra* on Mental Restraint through Mindfulness of Breathing; T. 602) and the *Chanxing faxiang jing* (禪行法想經; *Sūtra* on Dharmas for Contemplation in *Dhyāna* Practice; T. 605); works purportedly translated by Kumārajīva (Jiumoluoshe [鳩摩羅什]; 344–413 CE), such as the *Chanfa yaojie* (禪法要解; Explanations of *Dhyāna* Procedures; T.616), the *Zuochan sanmei jing* (坐禪三昧經; *Sūtra* on Seated *Dhyāna Samādhi*; T. 614), and the *Chan miyaofa jing* (禪祕要法經; *Sūtra* of the Secret and Essential Methods of *Dhyāna*; T. 613); and the *Damoduoluo chan jing* (達摩多羅禪經; *Dhyāna Sūtra* of *Dharmatrāta*; T. 618), said to have been translated by Buddhabhadra (Fotuobatuoluo [佛馱跋陀羅]; 350–429 CE), whose sobriquet was Tianzhu chanshi (天竺禪師]; *Dhyāna* Master fom India).

Monks in China who distinguished themselves in the theory or practice of meditation were categorized as "practitioners of *dhyāna*" (*xichan* [習禪]) in the *Liang gaoseng zhuan* (梁高僧傳; Liang Biographies of Eminent Monks; T. 2059), compiled by Huijiao (慧皎; 497–554 CE), and in the *Xu gaoseng zhuan* (續高僧傳; Additional Biographies of Eminent Monks; T. 2060) compiled by Daoxuan (道宣; 596–667 CE). In those works, such meditation specialists were variously depicted as experts in the translation, interpretation, or practical application of the aforementioned class of *dhyāna* scriptures. They were also referred to, individually and collectively, as "*dhyāna* masters" (*chanshi* [禪師]), "*dhyāna* monks" (*chanseng* [禪僧]), "those who take the *dhyāna* approach" (*chanmenzhe* [禪門者]), and "followers of the *dhyāna* tradition" (*chanzong* [禪宗]).

Three centuries later, however, many of the aforementioned labels that begin with the modifier "*chan*" had come to mean something entirely different than what they did in Daoxuan's *Xu gaoseng zhuan*. From the advent of the Song dynasty (960–1279) onward, the name *chanzong* (禪宗) referred exclusively to an elite "Chan Lineage" of ancestral teachers (*zushi* [祖師]) that had purportedly been

師]) that had purportedly been

created in India by the Buddha Śākyamuni and established in China by a "primal ancestor" (*chuzu* [初祖]) named Bodhidharma (*Putidamo* [菩提達磨 or 菩提達摩]). The Chan Lineage was said to transmit the very awakening of Śākyamuni: his so-called "buddha mind" (*foxin* [佛心]) or "mind dharma" (*xinfa* [心法]), as opposed to his verbal "teachings" (*jiao* [教]) that had been handed down in *sūtras* and commentarial literature.

Bodhidharma was further said to have "used mind to transmit mind" (*yixin chuanxin* [以心傳心]) in what was a "separate transmission apart from the teachings" (*jiao wai biechuan* [教外別傳]). Thus, the name "Chan Lineage" came to be used narrowly in the Song as a synonym for the "Lineage of Bodhidharma" (*Damozong* [達磨宗]), which was also called the "Buddha Mind Lineage" (*Foxinzong* [佛心宗]).

A "Chan master" (*chanshi* [禪師]) in the Song and following Yuan dynasty (1271–1368) was a monk who had "inherited the dharma" (*sifa* [嗣法]) from some previously recognized dharma heir (*fasi* [法嗣]) in the lineage of Bodhidharma; he was not necessarily someone who specialized in the practice of meditation (Skt. *dhyāna*; Chn. *chan* [禪]; Foulk, 1993, 160–167). A "Chan monastery" (*chansi* [禪寺] or *chanyuan* [禪苑]) was a public Buddhist monastery which the abbacy was reserved for an eminent monk in the Chan Lineage. The "Chan school" (*Chanmen* [禪門] or *Chanjia* [禪家]) consisted of living Chan masters – a relatively small a cadre of eminent monks who served as leaders, and a much wider group of monk and lay followers who also believed in and promoted the mythology of the Chan Lineage. "Chan monks" (*chanseng* [禪僧]) were those who belonged to the Chan school, either as the disciples of a Chan master or as Chan masters themselves; they did not necessarily spend time practicing meditation. No leader of the Tiantai lineage (*Tiantai zong* [天臺宗]) in the Song was ever called a Chan master, despite the fact that Tiantai monasteries had far more elaborate facilities for meditation practice than Chan monasteries.

Followers of the Chan school in the Song and later equated Chan literature almost exclusively with what they took to be historical records of the sayings and doings of ancestral teachers in the Chan Lineage. They criticized the ancient biographer Daoxuan for wrongly classifying Bodhidharma as a "practitioner of *dhyāna*," as if the latter's achievement had consisted of bringing mere meditation techniques to China, when what he had actually transmitted was the awakening of the Buddha. The common quarters (*zhongliao* [衆寮]) in Chan monasteries, a building in which monks were allowed to read at their individual seats on the platforms, had separate bookshelves for "Chan records" (*chanlu* [禪録]) and *sūtra* literature. Nobody thought that the class of *dhyāna* scriptures translated down through the 5th century CE had anything to do with Bodhidharma's Chan, so if those works were available at all, they would have been shelved with the *sūtras*.

The modern field of Zen studies (Jpn. *Zengaku* [禪學]) has given rise to several different conceptions of "Chan literature." That field was founded in late 19th- and early 20th-century Japan by learned Zen monks and lay followers who, embracing principles and methods of scientific philology and historiography that had recently been introduced from the West, used those to revisit Chan Lineage records that had been passed down in editions dating from the Song and later. At the time, European scholarship had anointed ancient Indian Buddhism as the primal, pure form of the religion, best preserved in the Pali canon. Japanese Buddhist intellectuals felt defensive about the Mahāyāna Buddhism of their native land, for it was under attack from abroad and within Japan as a degenerate, superstitious, overly ritualized set of beliefs and practices that had strayed far from the original teachings of Śākyamuni Buddha. The philological fact that the word "Zen" (禪) derived from the Indic *dhyāna* via the Chinese transliterations *channa* (禪那) and *chan* (禪) was seized upon as a way of emphasizing the Japanese Zen school's roots in ancient India and its preservation of the practice of meditation, which had been taught by the Buddha himself and did not conflict with modern science.

The early modern field of Zen studies, in any case, started out by defining Chan as the "meditation school" of Buddhism. A number of influential scholars at the time devoted much research to the Indian roots of Chan, not only in Buddhism, but in other ancient "yogic" traditions as well (Kohō, 1919, 1–86; Nukariya, 1923, 1–268; Okada, 1930, 87–248; Dumoulin, 1988, 13–26). Those pioneering researchers took it for granted that the *dhyāna* scriptures translated by An Shigao and Kumārajīva should be regarded as the earliest Chan literature to appear in Chinese. However, as the field of Zen studies developed from the 1930s on and new documents (the Dunhuang manuscripts and others) came to light, it became obvious to Japanese scholars that traditional (Song and later) records of the Chan Lineage in India were Chinese fabrications, and the study of the history of so-called "Indian Chan" fell out of fashion. A new theory swept the increasingly international field of Zen studies: Chan was cast as an iconoclastic movement that arose within Chinese Buddhism as a native reaction against the abstruse philosophizing, superstitious rituals, and "quietistic" meditation practices that had been imported from India (e.g. Hu Shih, 1932; 1953; Yanagida, 1971; 1974a). Scholars who subscribe to this view have tended to hold up the doctrine of "sudden awakening" (*dunwu* [頓悟]) as the defining characteristic of the early Chan school, and they do not regard the *dhyāna* scriptures that date from the 5th century CE or earlier as Chan literature.

All modern scholars agree that the massive body of literature produced in the Song, Yuan, and later that treats the sayings and doings of ancestral teachers in the Chan Lineage (including the early figures who are mythological) should certainly be labeled "Chan." That literature has given the world the stereotyped image of the eccentric Chan master who engages his disciples in witty repartee, baffles them with inscrutable replies to their straight-forward questions, and rains down shouts and blows as a means of bringing them to awakening. The literature is distinctive in form as well as content, and it employs a style of rhetoric that sets it apart from other Chinese Buddhist writings.

For modern scholars concerned with categorizing Chan literature, the murkiest period is that of the three centuries leading up to the early Song and the large-scale publication of Chan Lineage records that began at that time. The problem, in a nutshell, is how to decide what stray or independent texts (i.e. those not contained in Song Chan collections) that date from the Tang (618–907 CE) and Five Dynasties period (906–960 CE) should be regarded as "Chan." The standard approach has been to look for materials in Tang texts that seem to foreshadow one or another of the most salient features of Song Chan literature, which if found will mark the earlier texts as "Chan."

The oldest extant text that presages the Song understanding of the Chan Lineage is an epitaph for a monk named Faru (法如; 638–689 CE). Entitled *Tang Zhongyue shamen Shi Faru chanshi xingzhuang* (唐中岳沙門釋法如禪師行狀; Biography of Chan Master Shi Faru, a *Śramaṇa* of Zhongyue during the Tang; XXSKQS, *Jinshi cuibian* [金石萃編], 6.5b–7b), it states that he was heir to the "Buddha's hidden meaning" (*fo miyi* [佛密意]), which had been "transmitted from master to disciple in India essentially without scriptures" (天竺相承本無文字) until it reached Bodhidharma, who brought it to China (Yanagida, 1967, 487–88; McRae, 1986, 85–86). Bodhidharma is said to have transmitted that meaning to his disciple Huike (慧可), after which it was passed down through a line of monk successors consisting of Sengcan (僧璨) in the third generation, Daoxin (道信) in the fourth generation, Hongren (弘忍) in the fifth generation, and finally to Faru himself in the sixth generation. That lineage formula, which was probably fabricated by piecing together otherwise unconnected clusters of data from Daoxuan's *Xu gaoseng zhuan*, must have been quite successful in winning legitimacy and patronage for its proponents, for it was subsequently appropriated by other groups of monks who wanted to establish their own teacher as the "sixth patriarch" (*liuzu* [六祖]) in place of Faru.

The ongoing activity of constructing, appropriating and altering lineages of Bodhidharma is evinced in a number of 8th century texts that had been lost or suppressed by the early Song, but were rediscovered by modern scholars within the huge cache of manuscripts found at Dunhuang in western China early in the 20th century. The texts in question, treated in this article under the heading *Proto-Histories of the Chan Lineage*, have been categorized as "historical documents pertaining to the early Chan Lineage" (Jpn. *shoki Zenshū shiryō* [初期禪宗史料]) by Japanese scholars (Yanagida, 1967). Those that have attracted most scholarly attention are small collections of biographies of *dhyāna* masters, arranged in quasi-genealogical order (one per generation) to create a lineage deriving from Bodhidharma. They do not, however, employ the name "Chan Lineage" as a synonym for "Lineage of Bodhidharma," nor do they depict the latter as a multi-branched family tree.

The Song understanding of Chan literature as a body of sacred scripture that contains the teachings of numerous Chan masters in all branches of Bodhidharma's lineage is foreshadowed in the writings of the scholarly monk Guifeng Zongmi (圭峰宗密; 780–841 CE). On the basis of extant texts, it seems Zongmi was the first compiler of historical records to conceive the lineage of Bodhidharma as a family tree that had multiple legitimate branches, comprising in the aggregate scores of ancestral teachers. Zongmi took it upon himself to collect all the written records of putative heirs to Bodhidharma that he could find, publishing them in a massive compilation entitled *Chanyuan zhuquanji* (禪源諸詮集; Collected Writings from the Wellspring of *Dhyāna*; nonextant). yuan zhuquanji (禪源諸詮集;
om the Wellspring of *Dhyāna*;
ential lay patron of Zongmi,

the government official Pei Xiu (裴休; 797–870 CE), called that collection a "*dhyāna* canon" (*chanzang* [禪藏]) (T. 2015 [XLVIII] 398b10), implying that it was a Chinese analogue to the treasury of *sūtras* spoken by the Indian Buddha. The text itself is no longer extant, but we have a good idea of what it must have contained from its long introduction (Broughton, 2009, 22–23), which does survive: *Chanyuan zhuquanji duxu* (禪源諸詮集都序; Prolegomenon to the Collected Writings from the Wellspring of *Dhyāna*; T. 2015), written around 833 CE. In it, Zongmi states:

> *Dhyāna* has various lineages (*zong* [宗]) that are incompatible and opposed to one another. Their sayings, which I compile in the present work, are nearly as diverse as the "hundred schools" [of Chinese philosophy], but the differences of meaning in their tenets (*zongyi* [宗義]) can be exemplified using ten houses (*shishi* [十室]), namely: Jiangxi (江西), Heze (荷澤), Xiu of the North (*Beixiu* [北秀]), Shen of the South (*Nanshen* [南侁]), Niutou (牛頭), Shitou (石頭), Baotang (保唐), and Xuanshi (宣什), as well as Chou and Na (稠那), Tiantai (天臺), and so on. (T. 2015 [XLVIII] 400b28–29)

Significantly, the first eight of the "ten houses" of *dhyāna* listed were presented by Zongmi as lineages deriving from Bodhidharma, but the last two were not. "Chou" was Sengchou (僧稠; 480–560 CE), a student of Buddhabhadra, the translator of the *Damoduoluo chan jing*; "Na" was Guṇabhadra (*Qiunabatuoluo* [求那跋陀羅]; 394–468 CE), translator of the *Lengqie abaduoluo baojing* (楞伽阿跋多羅寶經; *Laṅkāvatārasūtra*; T. 670) in four fascicles; and "Tiantai" was Zhiyi (智顗; 538–597 CE), renowned author of the *Mohe zhiguan* (摩訶止觀; Great Calming and Contemplation; T. 1911), the most comprehensive and influential compilation of meditation techniques ever to appear in Chinese.

There is no doubt that Zongmi regarded the houses of *dhyāna* that stemmed from Bodhidharma as superior to those of Chou, Na, and Tiantai, but his inclusion of the latter shows that when he used the term *chanzong* (禪宗) he was still referring collectively to all *dhyāna* practitioners, not the "Chan Lineage" proper as that came to be understood in the Song. Zongmi outlined "five types of *dhyāna*" (*wuzhong chan* [五種禪]), which were really levels of understanding that could inform the physical and mental practice of seated meditation:

1. "*dhyāna* of non-Buddhist religions" (*waidao chan* [外道禪]);
2. "*dhyāna* of ordinary beings" (*fanfu chan* [凡夫禪]);
3. "*dhyāna* of the small vehicle" (*xiaosheng chan* [小乘禪]);
4. "*dhyāna* of the great vehicle" (*dasheng chan* [大乘禪]); and
5. "*dhyāna* of the supreme vehicle" (*zuishang sheng chan* [最上乘禪]).

Zongmi described the last approach, the one purportedly taken by Bodhidharma, as being grounded in "sudden awakening" (*dunwu* [頓悟]). He explained the "sudden" approach as an understanding that: "mind is of itself pure from the start, at root without afflictions (*fannao* [煩惱]) or contamination (*lou* [漏]), in its original state fully equipped with wisdom, and that mind is buddha" (T. 2015 [XLVIII] 399b13–22). In other words, followers of the "*dhyāna* of the highest vehicle" sit in meditation without any expectation of purifying the mind or becoming a buddha, because they realize that their own minds are already pure and inherently awakened (*wu* [悟]). In this context, "sudden" (*dun* [頓]) does not really indicate speed of accomplishment, except in the sense that the very fastest way to attain something is to realize that one already has it.

In taking the position of "sudden awakening," Zongmi aligned himself with a broad tendency within the ranks of Chinese meditation specialists to redefine *dhyāna* as something identical with perfect wisdom (Skt. *prajñā*; Chn. *hui* [慧]) itself. True *dhyāna* (the "highest" form of *dhyāna*), such arguments went, is not merely a technique for calming (Skt. *śamatha*; Chn. *zhi* [止]) the mind as an aid to cultivating insight (Skt. *vipaśyanā*, *guan* [觀]), as many "Hīnayāna" *dhyāna* scriptures suggest. True *dhyāna* is not a means to an end, but the end itself, described as "seeing the [buddha] nature" (*jianxiang* [見性]), or realizing the inherent "emptiness of dharmas" (*fakong* [法空]).

At their most extreme, some iterations of that position suggest that a correct understanding of *dhyāna* actually precludes the practice of seated meditation (*zuochan* [坐禪]). In his *Putidamo nanzong ding shifei lun* (菩提達摩南宗定是非論; Determining the Truth of Bodhidharma's Southern Lineage; Ma Junwu, 1970), for example, Heze Shenhui (荷澤神會; 684–758 CE) said:

> When I speak of sitting (*zuo* [坐]) now, what I mean by "sitting" is thoughts not being initiated (*nian buqi* [念不起]); when I speak of *dhyāna* (*chan* [禪]) now, what I mean by "*dhyāna*" is seeing the original nature (*jian benxing* [見本性]). Hence, I do not instruct people to seat their bodies, stabilize their minds, and enter into concentration (*zuoshen zhuxin ruding* [坐身住心入定]); (Ma Junwu, 1970, 287).

A similar view is expressed in the Dunhuang manuscript of the *Platform Sūtra*, a text that epitomizes Chan literature in the view of many modern scholars:

> Good friends, we also see that there are people who teach others to sit viewing the mind (*kanxin* [看心]) and viewing purity (*kanjing* [看淨]), not moving and not giving rise [to thoughts], and to make efforts in accordance with this. [As a result] deluded people do not awaken. They cling to [this practice] and become confounded. Good friends, in what way are concentration (*dìng* [定]) and wisdom (*hui* [慧]) the same? It is like a lamp flame (*deng* [燈]) and its light (*guang* [光]): when there is a flame, there is light; when there is no flame, there is no light. Flame is the substance (*ti* [體]) of light, and light is the function (*yong* [用]) of flame. Although they have two [different names], in essence they are not two [different] kinds of things. These things "concentration" and "wisdom" are also like that. (T. 2007 [XLVIII] 338b24–29)

In this passage, the term "concentration" is a synonym for "*dhyāna* concentration" (*chanding* [禪定]), which conventionally involves stopping (*zhi* [止]) the mind on some object of meditation, but here is redefined as identical with wisdom.

There are a number of Chinese Buddhist texts, some of them discovered at Dunhuang, that redefine *dhyāna* in a manner similar to that found in the *Platform Sūtra* and the works of Shenhui. Examples include:

1. *Foshuo faju jing* (佛說法句經; *Dharmapada Sūtra* Spoken by the Buddha; T. 2901), an apocryphal text produced in China around 650 CE;
2. *Jingang sanmei jing* (金剛三昧經; *Sūtra* of Adamantine Absorption; Skt. **Vajrasamādhisūtra*; T. 273), another apocryphon that circulated widely in China, although it was probably written in Korea around 685 CE (Buswell, 1989);
3. *Chanmen jing* (禪門經; *Dhyāna* Gate Sutra; Stein 5532; Pelliot 4646), composed between 695 and 730 CE;
4. *Wuxing lun* (悟性論; Great Master Bodhidharma's Treatise on the Awakened Nature; T. 2009 [XLVIII] 370c11–373b11; ZZ 1219);
5. *Sanshufayi* (三窠法義; Meaning of the Three Categories of Dharmas; Pelliot 3861; Tanaka, 1983, 371); and
6. *Dasheng sanshu* (大乘三窠; *Mahāyāna* Three Categories; Stein 2944; Pelliot 3357, 4597; Tanaka, 1983, 371).

In the opinion of modern scholars who regard the philosophical position of sudden awakening as the defining characteristic of the early Chan school, all of these texts can be classified as Chan literature on the grounds that their discussions of *dhyāna* are informed by that doctrine, even when they make no mention of a lineage of Bodhidharma or any of the ancestral teachers traditionally associated with it. Modern scholars who are still inclined to regard Chan as the "meditation school" do not resist that classification, for the texts in question do deal with the general topic of *dhyāna* practice, despite their radical reinterpretations of it.

It is clear from Zongmi's writings that he opposed the most extreme interpretations of sudden awakening, which according to him led some houses of *dhyāna* in Bodhidharma's lineage to literally abandon conventional Buddhist practices such as following Vinaya rules, worshiping Buddha, and sitting in meditation. What Zongmi advocated was "sudden awakening followed by gradual practice" (*dunwu jianxiu* [頓悟漸修]), an approach that presupposed a three-stage model:

1. an initial awakening (*jiewu* [解悟]) to the fact one's own mind is buddha;
2. long hard practice informed by that initial understanding; and
3. full awakening (*zhengwu* [證悟]) or buddhahood (Gregory, 1991, 192–196).

Zongmi's *Chanyuan zhuquanji duxu* also shows that he resisted another tendency in his day, which was to cast Bodhidharma as someone who made no use of *sūtras* whatsoever:

> There are also *dhyāna* worthies (*chande* [禪德]) who ask [me]: "Bodhidharma transmitted mind and did not rely on scriptures (*chuan xin bu li wenzi* [傳心不立文字]). How can you turn your back on our patriarch by lecturing on *śāstras* and transmitting *sūtras*?" (T. 2007 [XLVIII] 401b6–7)

This antagonistic question was inspired by the fact that, in his *Chanyuan zhuquanji duxu*, Zongmi correlated differences in the main teachings and practices of the *dhyāna* lineages he treated with analogous differences found in Mahāyāna *sūtras* and *śāstras*. Zongmi's response was that the expression "not setting up scriptures" should be not be taken literally. Earlier in the *Chanyuan zhuquanji duxu* he wrote:

> When Bodhidharma received the dharma and brought it personally from India to China, he saw that most of the practitioners in this land had not yet obtained the dharma, and that they merely took names and numbers for understanding and took formal affairs as practice. He wanted to make them understand that the moon

> of the practitioners in this land
> ined the dharma, and that they
> mes and numbers for under-
> ok formal affairs as practice. He
> them understand that the moon

> does not consist in the pointing finger and that the dharma is one's own mind. Thus he simply transmitted mind by means of mind without setting up scriptures (*yi xin chuan xin bu li wenzi* [以心傳心不立文字]), manifested the principle (*zong* [宗]) and destroyed attachments. It is for this reason that he spoke as he did. It was not that he preached liberation apart from scriptures. Thus, those whom he instructed, who understood what he meant, always praised the *Diamond* (*Jingang* [金剛]) and *Laṅkāvatāra* (*Lengqie* [楞伽]) [*sūtras*] saying, "These two are essential guides to one's own mind." Nowadays, disciples choose one or the other [*dhyāna* or *sūtras*], and that is the source of their delusion. Those who cultivate mind (*xiuxin* [修心]) [i.e. practice meditation] regard the *sūtras* and *śāstras* as having a different purport (*biezong* [別宗]), while those who lecture (*jiangshuo* [講說]) [on *sūtras*] regard the *dhyāna* approach (*chanmen* [禪門]) as a different method (*biefa* [別法]). When people hear discussions of cause and effect (*yin guo* [因果]) or cultivation and realization (*xiu zheng* [修證]), they imagine that the speakers must belong to the *sūtras* and *śāstras* camp. They do not understand that cultivation and realization are truly the fundamental concern of the *dhyāna* approach. When they hear it explained that "mind is buddha," they imagine that the speaker must belong to the *dhyāna* of subjective mentation. They do not understand that "mind is buddha" is really the fundamental meaning of the *sūtras* and *śāstras*. (T. 2015 [XLVIII] 400b17–26)

Zongmi, in short, rejected the idea that *dhyāna* practitioners and *sūtra* exegetes were engaged in two different, mutually incompatible kinds of Buddhism.

Zongmi had at his disposal a number of earlier texts that presented competing versions of a single line of spiritual descent from Bodhidharma, each naming a different eminent monk (e.g. Faru [法如], Shenxiu [神秀], or Huineng [慧能]) as the sole legitimate heir in the sixth generation. He was not a neutral judge of those records, for he identified himself as a successor in the lineage of Heze Shenhui (荷澤神會; 670–762 CE). In his view, Huineng was the true sixth patriarch in the main line (*zhengzong* [正宗]) of descent from Bodhidharma, and Huineng's disciple Shenhui was the seventh patriarch. Nevertheless, Zongmi recognized a number of other lineages as "collateral offshoots" (*pangchu* [傍出]) from the main line and granted them legitimacy as heirs of Bodhidharma.

Zongmi's influence on the Chan school of the Song dynasty and later was muted, but strong nevertheless. The main body of his *Chanyuan zhuquanji duxu* failed to survive a process that took place early in the Song, whereby existing records of Bodhidharma's lineage were systematically collected, culled, redacted, organized, and published in imperially sanctioned editions of the Buddhist canon. His claim that Shenhui had been the seventh patriarch in Bodhidharma's lineage was ignored, and the list of 28 ancestral teachers in India that he had formulated was also rejected by Song historians of the Chan Lineage, who favored a slightly different set of 28. Zongmi's position on the "unity of doctrinal and meditative approaches" (*jiaochan yizhi* [教禪一致]) was carried over into the Song, but it only survived as a minority point of view among followers of the Chan school. In the end, his vision of the *chanzong* as a diverse community of *dhyāna* practitioners was replaced with a conception of the *chanzong* as the Chan Lineage: a "separate transmission" of the buddha mind that was restricted to heirs of Bodhidharma. For all of those reversals, Zongmi's writings had a significant impact. His pioneering efforts at collecting the recorded sayings and writings of a great many Chinese *dhyāna* masters inspired similar compilations of Chan literature in the Song, his vision of a multi-branched lineage of dharma transmission from Bodhidharma provided the model for those compilations, and his *Chanyuan zhuquanji duxu* was a direct source of raw materials for them. In the end, Zongmi's vision of the compatibility of *dhyāna* with the written word won out, for it was the very "transmission of mind by means of mind" from hundreds of Chan masters to thousands of disciples that became the subject matter of a vast body of Chan literature.

Soon after the advent of the Song, the Chan school, elements of which had begun to take shape in the 8th and 9th centuries CE, emerged as a unified movement that dominated the upper echelons of the Buddhist monastic order. Compilers of records of the dharma heirs of Bodhidharma reached a consensus on what the shape of the Chan Lineage had been in the Tang and earlier, and that conception remained orthodox ever after. The body of Chan literature that took shape at that time smoothed out many of the conflicts over teachings, practices, and genealogical legitimacy that were reflected in Zongmi's writings, and it attributed a uniform style of witty, irreverent rhetoric to a great many ancestral teachers, making the Chan Lineage of the Tang and Five Dynasties appear rather homogeneous and consistent in its rejection of the "teachings."

Having come to occupy a privileged position within the Buddhist monastic order in the Song, largely through the influence that Chan literature exerted on the imperial court and powerful government officials (all of them members of the literati class), leaders of the Chan school embarked on a campaign to justify their high status on other grounds as well. They began to claim that the main features of the organization and operation of the elite public monasteries, which were regulated by a set of procedural guidelines and liturgical manuals known generically as "rules of purity" (*qinggui* [清規]), had been invented in the Tang by an eminent Chan master: Baizhang Huaihai (百丈懷海; 749–814 CE), who was said to have founded an independent Chan monastery and authored the first such monastic code. The story of Baizhang the monastic legislator began to circulate in China in the latter half of the 10th century, promoted chiefly by a short text known as the *Chanmen guishi* (禪門規式; Regulations of the Chan School). Some version of that text was in existence before 988 CE, when parts of it were cited in the *Song gaoseng zhuan* (宋高僧傳; Song Biographies of Eminent Monks; T. 2061 [L] 770c–771a.), but the oldest complete edition is one appended to Baizhang's biography in the *Jingde chuandeng lu*; see below compiled in 1004 (T. 2076 [LI] 250c27–251b3; trans. Foulk, 1999b).

During the Song and Yuan, a number of Chan abbots collected and edited "rules of purity" that claimed, in their titles and/or prefaces, to derive from Baizhang. The oldest of the texts in question, the *Chanyuan qingui* (禪苑清規; Rules of Purity for Chan Monasteries; ZZ 1245; critical ed. and trans. Kagamishima *et al.*, 1972; trans. Yifa, 2002), was compiled in 1103 by Changlu Zongze (長蘆宗賾; ?–1107), abbot of the Hongji Chan Cloister (*Hongji Chanyuan* [洪濟禪院]), a public monastery in the Zhending Prefecture (眞定府). That was followed by:

1. *Ruzhong riyong qinggui* (入衆日用清規; Rules of Purity for Daily Life in the Assembly; ZZ 1246 [63]; trans. Foulk, 1995), written in 1209 by Wuliang Zongshou (無量宗壽);
2. *Conglin Jiaoding qinggui zongyao* (叢林校訂清規総要; Essentials of the Revised Rules of Purity for Major Monasteries; ZZ 1249), compiled in 1274 by Jinhua Weimian (金華惟勉);
3. *Chanlin beiyong qinggui* (禪林備用清規; Auxiliary Rules of Purity for Chan Monasteries; ZZ 1250), completed in 1286 by Zeshan Yixian (澤山弌咸);
4. *Huanzhu an qinggui* (幻住菴清規; Rules of Purity for the Huanzhu Hermitage; ZZ 1248), written in 1317 by the eminent Chan master Zhongfen Mingben (中峰明本; 1263–1323); and
5. *Chixiu baizhang qingqui* (勅修百丈清規; Imperial Edition of Baizhang's Rules of Purity;T. 2025 [48]; trans. Ichimura, 2006), produced by imperial decree and compiled by the Chan abbot Dongyang Dehui (東陽德輝) between the years 1335 and 1338.

These texts were all claimed by members of the Chan school in the Song and Yuan as in-house materials. Modern Japanese scholarship, too, regards "rules of purity" as a genre of Chan literature. The main reason is that the texts in question played a key role in the establishment of Chinese-style monasteries in Japan in the Kamakura period (1185–1333), almost all of which were founded and inhabited exclusively by followers of the Chen (Zen) school. Japanese scholars are inclined to accept the traditional story about Baizhang establishing a separate Chan monastery with a distinctive set of rules because, in their country, early Zen monasteries did in fact differ in their oganization and operation from preexisting Tendai and Shingon (眞言) institutions. Some scholars, moreover, have cast the early generations of Bodhidharma's lineage as an iconoclastic movement that rejected the "superstitious" beliefs and merit-making rituals of conventional "monastery Buddhism" (Jpn. *garan bukkyō* [伽藍佛教]; Ui, 1935, 1–81; Yanagida, 1974a, 7). For them, it is convenient to imagine that when the pioneers of "pure Chan" (Jpn. *junsui Zen* [純粋禪]) finally settled down in monasteries, they did so in communities that were separate from mainstream Buddhism.

Although the modern field of Zen studies has not reached any consensus on criteria for defining "Chan literature," that fact has not stopped Japanese scholars from listing "Zen texts" (Jpn. *Zenseki* [禪籍]) and "Zen writings" (Jpn. *Zenten* [禪典]) in works such as the massive *Zenseki mokuroku* (禪籍目錄; Catalogue of Zen Texts; Komazawa Daigaku, 1928) and the comprehensive *Zenseki kaidai* (禪籍解題; Bibliographic Notes on Zen Texts; Yanagida, 1974b). The compilers of major canonical collections such as *Taishō shinshū daizōkyō* (大正新修大藏经) and *Dainippon zokuzōkyō* (大日本續藏經) also saw fit to group Chinese Buddhist texts together in de facto "Zen school sections" (Jpn. *Zenshūbu* [禪宗部]), with no explanation of the criteria they used. Other collections of Chan literature published in Japan include: *Zengaku taikei* (禪學大系; Collected Works for Zen Studies; 1910–1915) in 8 volumes; *Kokuyaku zenshū sōsho* (國譯禪宗叢書; Library of Zen School Texts in Japanese Translation; Miyashita, 1919–1921) in 22 volumes; *Kokuyaku zengaku taisei* (國譯禪學大成; Comprehensive Collection for Zen Studies in

A Working Definition and Typology of Chan Literature

In this article, the designation "Chan literature" is reserved for literary genres that were unique to, or at least invented by and characteristic of, the Chan school of Buddhism. We have seen, however, that various stakeholders and academics, ancient and modern, have disagreed on what the "Chan school" is and what its literature consists of. It is not possible to resolve this matter by declaring what Chan "really" is – except that it is a Chinese word that, historically, has had many different, well-attested meanings. Nevertheless, for the purposes of this article, the Chan school in medieval China is provisionally defined as:

> the group of people – monks, nuns, and lay followers – who were united by a shared belief in a multi-branched Chan Lineage, conceived as an extended spiritual clan that was founded in India by the Buddha Śākyamuni and transmitted to China by a primal ancestor named Bodhidharma.

Working from this stipulative definition, the literature of the Chan school includes some texts that touch on the topic of *dhyāna*, and a great many others that do not. By the same token, some part of the extensive Chinese Buddhist literature on *dhyāna* may be classified as "Chan," but much of it (e.g. Zhiyi's *Mohe zhiguan*) may not.

For the purposes of this article, a further distinction is drawn within the category of Chan literature between (1) traditional histories of the Chan Lineage, and (2) proto-histories of the Chan Lineage.

The mark of a traditional history, as defined herein, is that the text in question posits or assumes a multi-branched Chan Lineage consisting of 28 Indian ancestral teachers (the 28th being Bodhidharma), six Chinese ancestral teachers (the sixth being Huineng), and a bifurcation in the generations following Huineng into two main branches: the lineages of Mazu Daoyi (馬祖道一; 709–788 CE) and Shitou Xiqian Xiqian (石頭希遷; 700–791 CE). Although the traditional histories present documentary records that ostensibly go all the way back to the founding of the Chan Lineage in ancient India at the time of Buddha Śākyamuni, the archetypal work that established the aforementioned vision of the lineage as a lasting orthodoxy was the *Jingde chuandeng lu* (景德傳燈録; Jingde Era Record of the Transmission of the Flame; T. 2076; critical ed. Yanagida, 1984c; trans. Chang, 1971; Ogata, 1986) in 30 fascicles, compiled in 1004, then heavily redacted and published in 1009.

Hundreds of texts dating from the Song and later may be categorized as traditional histories. Most of them belong to one of three genres:

1. records of the transmission of the flame (*chuandeng lu* [傳燈録]), which are collections of biographies of Chan masters arranged in genealogical order;
2. discourse records (*yulu* [語録]) of individual Chan masters; and
3. *kōan* (*gong'an* [公案]) collections: selections of pithy sayings attributed to famous ancestral teachers, often with comments attached by the compilers, who themselves were recognized Chan masters.

In addition, there are a number of miscellaneous works that are not readily subsumed under any of those three classifications but may be regarded as histories of the Chan Lineage as that entity has been traditionally conceived.

A proto-history of the Chan Lineage, as defined herein, is any text that falls short of satisfying all the criteria for classification as a traditional history, but either (1) prefigures the traditional histories of the Chan Lineage in some way, or (2) was regarded by the compilers of the traditional histories in the Song and later as a legitimate source for the history of the Chan Lineage. Scores of texts dating from before the advent of the Song may be categorized as proto-histories: Those include the works of Zongmi, the Dunhuang manuscripts that posit some sort of lineage stemming from Bodhidharma, and many other manuscripts and inscriptions that contain biographical information or teachings ascribed to monks who were subsequently named as ancestral teachers in the Chan Lineage.

On the basis of the criteria employed in this article, many texts that modern scholars have hitherto regarded as Chan literature do not qualify for that classification. The texts in question fall into four categories.

First, because the Chan school is defined herein as a movement centered on the development, promotion, and ritual reenactment of the Chan Lineage myth, none of the early (2nd–5th cent.) *dhyāna* scriptures may be classified as Chan literature, unless they can be shown to have somehow figured in that process of myth making. With the noteworthy exception of the *Damoduoluo chan jing*, most of the texts in question did not play any such role.

Second, the mere fact that a Chinese Buddhist text advanced the doctrine of "sudden awakening" or redefined *dhyāna* as wisdom is not sufficient to classify it as Chan literature. It is true that a number of works dating from the Tang (e.g. the *Platform Sūtra* and the writings of Shenhui) are concerned both with constructing a lineage of Bodhidharma and with characterizing its approach to *dhyāna* as one informed by "sudden awakening," but there was no necessary or universal connection between those two projects. The redefinition of *dhyāna* was an intellectual movement that spread widely through the ranks of the Buddhist saṅgha in China. It was inspired by the *Vimalakīrtinirdeśa* and gained a major impetus in the writings of Tiantai Zhiyi. There is no reason to assume that the authors of the *Foshuo faju jing*, *Jingang sanmei jing*, or similar texts named above were interested in creating, appropriating, or attaching themselves to a lineage of Bodhidharma. The construction of Bodhidharma lineages seems to have been initiated by a relatively small number of localized groups that formed within the Buddhist saṅgha at large. That they tried to credit Bodhidharma with bringing the new, "highest" understanding of *dhyāna* to China can be viewed as an attempt to corner the market on an intellectual property that had already gained considerable prestige within the ranks of *dhyāna* practitioners at large.

Third, while the brief text known as the *Chanmen guishi* and all other incidental writings (prefaces etc.) that claim that Chan master Baizhang was the founder of the first independent Chan monastery and the author of a distinctive set of monastic rules certainly qualify as Chan literature, the genre of texts known as "rules of purity" do not. As a matter of historical fact, virtually all of the physical structures, bureaucratic arrangements, ritual procedures and modes of religious discipline that came to be codified in the *Chanyuan qingui* (compiled in 1103), or that appeared in later monastic rules that were nominally "Chan," had evolved over many centuries, with input from a broad cross-section of the Buddhist saṅgha. The authors and revisers of monastic rules in China included a few monks who identified themselves as heirs to Bodhidharma's lineage, such as Baizhang and Weishan Lingyou (潙山靈祐; 771–853 CE), and many others who did not, such as Daoan (道安; 312–385 CE), Zhiyi (智顗; 538–597 CE), Daoxuan (道宣; 596–667 CE), and Zunshi (遵式; 963–1032). All of them strove to adapt Indian Vinaya texts to the Chinese cultural milieu, and all contributed to the evolution of the "rules of purity" genre that flourished in the Song (Foulk, 1987, 1993, 2004; Yifa, 2002).

Moreover, there were a few public monasteries in the Song and Yuan known as teachings monasteries (*jiaoyuan* [教苑]), in which the abbacies were earmarked for eminent monks in the Tiantai Lineage, and a few others called Vinaya monasteries (*Lüyuan* [律苑]), where the abbacies were restricted to members of the Nanshan Vinaya Lineage (*Nanshan Lüzong* [南山律宗]), and those institutions were also regulated by monastic codes belonging to the "rules of purity" genre. The *Jiaoyuan qinggui* (教苑清規; Rules of Purity for Teachings Monasteries; ZZ 968), compiled in 1347 by Yunwai Ziqing (雲外自慶), describes a monastery layout, bureaucratic structure, and calendar of activities that is nearly identical to that detailed in the *Chixiu baizhang qinggui*. The *Lüyuan shigui* (律苑事規; Rules for Vinaya Monasteries; ZZ 1113), compiled in 1324 by Xingwu Xinzong (省悟心宗), is very similar in contents to the *Chanlin beiyong qinggui*. It is also clear from those texts (and some Tiantai precursors that survive from the early Song) that the "rules of purity" genre was not really a body of literature invented by, or uniquely characteristic of, the Chan school in China. Even in Japan the Zen school did not have a complete monopoly on the Song "rules of purity," for they were also employed by Shunjō (俊芿; 1166–1227), a Japanese monk who spent years studying Vinaya and Tiantai teachings on the continent and then founded a Song-style monastery named Sennyūji (泉涌寺) in Kyoto (Foulk, 2006, 144–145).

Fourth, there are a number of texts that played a vital role in the training of Buddhist monks who belonged to the Chan school in medieval China, including certain Mahāyāna *sūtras* that Chan monks often studied and quoted, and various *sūtras*, *gāthās* and *dhāraṇīs* that comprised the body of liturgical texts routinely chanted in Chan monasteries. Because those represent elements of religious belief and practice that were held in common with most other Chinese Buddhists, they cannot be regarded as distinctively "Chan" literature.

Finally, this article treats only what may be called the classical literature of Chan. It does not deal with any literature, whether academic or religious

Traditional Histories of the Chan Lineage

The Chan texts treated in this section are "traditional" in the sense that they have been accepted in East Asian Buddhism, from the early Song down until the emergence of the modern field of Zen studies in the 20th century, as standard and authoritative accounts of the history of the Chan Lineage. Modern scholars agree with the traditional idea that all of the literature in question is "Chan," although of course they rate the narratives that appear in it on a scale that ranges from purely mythological to fairly reliable as historical evidence. The literature covered in this section is also traditional in the sense that even today, in the wake of modern critical reevaluations, the material it contains gives identity and inspiration to followers of the Chinese Chan, Japanese Zen, Korean Sŏn, and Vietnamese Thiền schools and informs many of the religious practices and rituals in which they engage.

The genre known as "records of the transmission of the flame" (*chuan deng lu* [傳燈録]), takes precedence among the traditional histories, for it is the body of literature that maps the basic contours of the Chan Lineage and explains the nature of the supreme dharma said to have been transmitted through it, beginning with the Buddha Śākyamuni (and six previous buddhas) down to the present. The discourse records, *kōan* collections, and other traditional histories all take the genealogy established in the "records of the transmission of the flame" for granted, for they elaborate on the words and deeds of monks whose identities as ancestors in the Chan Lineage have already been established in those texts

Records of the Transmission of the Flame

The trope of "transmitting a flame" (*chuan deng* [傳燈]) by using one lamp to light another is commonly used in Chan literature as a metaphor for transmission of the "mind dharma" from master to disciple. The Chinese expression *chuan deng* has often been rendered into English as "transmission of the lamp," but that translation misses the point of the metaphor. The word *deng* does mean "lamp" or "lantern" in many contexts, but here it clearly means a flame – the flame of awakening – that is kept alive by being passed down from teachers to disciples through the generations. The use of *deng* to mean the flame of a lamp, as opposed to the body of the lamp itself, is attested in the Dunhuang manuscript of the *Platform Sūtra*, quoted above. The text says, "When there is a flame (*deng* [燈]), there is light; when there is no flame, there is no light." If one translates *deng* in this passage as "lamp," the statement becomes patently false and the entire metaphor loses its force, for obviously a lamp may exist – unlit – without there being any light. Igniting one lamp with another is an example of a process in which the giver loses nothing of the thing given. That, and the fact that a flame gives light (a symbol of clear vision and comprehension), made "transmitting the flame" an apt metaphor for the communication of insight from master to disciple in a manner that "does not rely on scriptures."

Modern Japanese scholars use the expression "flame histories" (Chn. *dengshi*; Jpn. *tōshi* [燈史]), a usage that first appears in Chinese texts dating from the Qing dynasty (1644–1912), to refer in a generic way to "records of the transmission of the flame." That usage is followed here.

The archetypal text in the "flame history" genre is the *Jingde chuandeng lu* in 30 fascicles. It was produced by a team of editors at the Song court, on the basis of a work that had just been compiled in 1004 by the monk Yong'an Daoyuan (永安道原; dates unknown), a dharma heir in a branch of the Chan Lineage deriving from master Fayan Wenyi (法眼文益; 885–958 CE). Daoyuan's collection, probably entitled *Fozu tongcan ji* (佛祖同参集; Collated Records of the Buddhas and Ancestors; Ishii, 1987, 13), does not survive in its original form, but a *Fozu tongcan ji xu* (佛祖同参集序; Preface to the Collated Records of the Buddhas and Ancestors; Ishii, 1987, 21–23) does, which is how we know its title and something of its contents.

Daoyuan's sources for the biographies and sayings of ancestral teachers all belong to the category defined herein as proto-histories of the Chan Lineage. According to the historian of Buddhism Nianchang (念常; 1282–1323), those sources included:

1. the *Baolin zhuan* (寶林傳; Baolin Biographies; Yanagida, 1983b; Tanaka, 2003), compiled by Zhiju (智炬) in 801 CE;
2. the *Shengzhou ji* (聖冑集; Sacred Bloodlines Collection; Stein 4478; Yanagida, 1983b, 8–14), compiled by Chan master Xuanwei (玄偉); and the *Xu Baolin zhuan* (續寶林傳);
3. Additional Baolin Biographies; nonextant), compiled by Weijin (惟勁) in 907–910 CE (T. 2036 [XLIX] 551a23–b1).

Daoyuan was probably influenced in his depiction of the branching of the Chan Lineage following Huineng by the *Zutangji* (祖堂集; Ancestors Hall Collection; Yanagida, 1984), which had initially been compiled in 952 CE. It is also likely that he used Zongmi's *Chanyuan zhuquanji* as a major source. The editors who redacted Daoyuan's compilation, however, seem to have purged it of all citations of "teachings" (*sūtras* and *śāstras*) that may have derived from Zongmi (Ishii, 1987, 12–16), favoring a more literal reading of Bodhidharma's purported "separate transmission" of the mind dharma.

Chief among the editors of Daoyuan's *Fozu tongcanji* was the literatus Yang Yi (楊億; 974–1020), who is described as an "academician of the Hanlin Academy (*Hanlin xueshi* [翰林學士]) and vice director of the ministry of works (*gongbu shilang* [工部侍郎])" (T. 2067 [LI] 464a25). Yang Yi was a layman, but he and his fellow editor Li Wei 李維) were believers in the Chan Lineage who had close contacts with monks associated with its Linji (臨濟) branch. Yang Yi himself was said to be a dharma heir of Chan master Guanghui Yuanlian (廣慧慧元璉; 951–1036), a descendant of Linji Yixuan (臨濟義玄; ?–866 CE) in the fifth generation (ZZ 2B-8–4.389b). When Yang Yi and his team were finished editing Daoyuan's collection they named the resulting work *Jingde chuandeng lu* after the current reign name of the emperor Zhenzong (眞宗). The text was formally dedicated to the emperor and his two predecessors – the founding and second emperors of the Song dynasty, Taizu (太祖), and Taizong (太宗) – and included in the Buddhist canon by imperial decree. The carving of wood blocks for printing the text began in 1009.

The *Jingde chuandeng lu* is a huge collection of biographies of individual Chan masters who were selected not on the basis any particular teachings or practices they engaged in, but by the fact that all were deemed heirs to the "mind dharma" passed down through the Chan lineage. The initial transmission of that dharma from the Buddha Śākyamuni to the monk Mahākāśyapa is described as follows:

> After he [Śākyamuni] had preached the dharma in the world for 49 years, he told his disciple Mahākāśyapa, "I entrust to you the pure dharma eye (*qingjing fayan* [清淨法眼]), the inconceivable mind of nirvāṇa (*niepan miaoxin* [涅槃妙心]), the subtle true dharma (*weimiao zhengfa* [微妙正法]), the real sign of which is its signlessness (*shixiang wuxiang* [實相無相]). You must protect and maintain it." He also commanded Ānanda to assist in the propagation [of the dharma] and not to let it be cut off. The Buddha further instructed Kāśyapa with a verse, saying:
>
> The dharma is at root a dharma with no dharma,
> But that no dharma dharma is yet the dharma.
> When I now transmit no dharma,
> Which dharmas could possibly be the dharma?
>
> Then, when the World-Honored One had finished reciting this verse, he further said to Kāśyapa, "I give to you this *saṃghāṭī* [monk's robe], sewn with gold thread. Transmit it in turn to the Buddha-to-be [Maitreya], and until Maitreya Buddha appears in the world do not let it be spoiled." Kāśyapa listened to these verses and worshiped the feet [of the Buddha] with his head, saying, "Well spoken, well spoken! I shall follow your command and respectfully comply with [you,] Buddha." Then the World-Honored One went to the city of Kuśinagara, where he told the various assemblies [of followers], "Now I have taken sick and wish to enter nirvāṇa." Thereupon he rested beneath a pair of *śāla* trees beside the river Hiraṇya, on his right side with one leg lying on the other, and quietly passed away. (T. 2076 [LI] 205b26)

According to this account, the Buddha Śākyamuni's very last act before entering nirvāṇa was to transmit his "inconceivable mind" – the "signless" dharma – to Mahākāśyapa, thereby founding the Chan Lineage.

Although Yang Yi and the other editors spoke in their preface to the *Jingde chuandeng lu* as if the Chan Lineage had evolved organically over the course of numerous generations of ancestral teachers following Mahākāśyapa, its overall scope and shape prior to the Song was actually determined by editorial decisions that they themselves made. That is to say, by deciding what biographies to include in the collection, what order to put them in, and what writings or sayings of the individual subjects to quote, they took all of the documentary materials received from the past and organized them into what, for the next nine centuries, was the ostensibly historical (but actually literary) entity known as the early Chan Lineage.

The biographies in the *Jingde chuandeng lu* are arranged in the manner of a family tree, in genealogical order, with spiritual ancestors always treated before their descendants. Within each individual's biography, the Chan master from whom the subject inherited the dharma is named, as are his main dharma heirs, if any. A total of 1701 heirs to the Chan Lineage are named in the text, but only 951 of them are deemed important enough to be given

their own biographies. The Chan Lineage as a whole is depicted as spanning 52 generations, the last of which included recently deceased ancestral teachers who could have been known personally by the compiler and editors.

An analysis of how the biographies are sequenced shows that the editors of the *Jingde chuandeng lu* adhered to two basic principles of genealogical organization: (1) that it is desirable for the biographies of dharma heirs to follow closely after the biographies of their teachers, and (2) that it is desirable for the biographies of "dharma brothers" (individuals who are heirs to the same teacher) to be grouped together. In the case of a diagrammed family tree, it is a relatively simple matter to adhere to both of those principles, but the individual biographies in the *Jingde chuandeng lu* must be strung together like beads on a single thread, so adherence to one of the principles means that the other will be sacrificed. In general, an effort is made to group the biographies generation by generation, in descending order, such that all the immediate heirs of a given Chan master, who are regarded as "dharma brothers," are lined up in the first generation, followed by all the "dharma cousins" in the second generation, the "dharma second cousins" in the third generation, and so on. However, that second principle of organization is only followed up to a point, for the *Jingde chuandeng lu* divides the Chan Lineage as a whole into major and minor branches, which are treated one at a time. Thus, when all the descendants in one line of descent have been treated, the next biography to appear in the text is one of a Chan master who flourished many generations earlier, at the head of a different branch of the lineage. Form-critical analysis suggests that some major "branchings" of the Chan Lineage depicted in the text may not reflect any historical reality about actual associations among bygone Chan masters, but may simply be a product of the editors' decision to honor a particular ancestral teacher by locating the biographies of all his dharma heirs ("sons" and "grandsons") immediately after his own; that is, to honor him by following the first principle of organization, at the expense of widely separating his biography from those of his dharma brothers.

The first four fascicles of the *Jingde chuandeng lu* depict a Chan family tree with a main trunk that extends from "seven buddhas" of *kalpas* past and present, the last of whom is Śākyamuni, through the "1st patriarch Mahākāśyapa", "2nd patriarch Ānanda," and so on, down to the "28th patriarch Bodhidharma", "29th patriarch Huike", "30th patriarch Sengcan", "31st patriarch Daoxin", "32nd patriarch Hongren", and "33rd patriarch Huineng". In later Chan texts, Bodhidharma is named as both the 28th patriarch in India and as the "primal ancestor" in China, whereas Huike, Sengcan, Daoxin, Hongren, and Huineng are identified as the 2nd, 3rd, 4th, 5th, and 6th "Chinese patriarchs" (*Zhonghua zu* [中華祖]), respectively.

The *Jingde chuandeng lu* recognizes various "collateral offshoots" in the generations leading up to Huineng, including: 22 descendants of the "24th patriarch, Venerable Siṃha"; three dharma heirs of the 28th patriarch Bodhidharma; 17 descendants of the 29th patriarch Huike; scores of descendants of the 31st patriarch Daoxin, all of them heirs in the Niutou (牛頭; Ox Head) line founded by Daoxin's disciple Farong (法融; 594–657 CE); and numerous descendants of the 32nd patriarch Hongren, including many in the Northern Lineage (*Beizong* [北宗]) founded by Hongren's disciple Shenxiu (神秀; 606?–706 CE), whose failure to be chosen as sixth patriarch is highlighted in the *Platform Sūtra*. The *Jingde chuandeng lu* makes it clear with its numbering of 33 patriarchs, nevertheless, that the main line (*zhengzong* [正宗]) of dharma transmission in the Chan Lineage led directly from Śākyamuni down to Huineng.

For the generations following Huineng, the *Jingde chuandeng lu* abandons the notion of a patriarchal succession that is limited to a single full-fledged dharma heir in each generation and shifts to a different model, wherein all sibling heirs are equal in legitimacy. The only indication given in the text about the high status of a given Chan master following Huineng is the aforementioned tactic of locating the biographies of his heirs immediately after his own, which makes him appear to be the founder of a branch lineage. From the standpoint of the compiler, editors, and readers of the *Jingde chuandeng lu*, of course, the most important ancestral teachers were those through whom they traced their own lines of spiritual descent back to Bodhidharma and Śākyamuni. By the advent of the Song, it seems, all such claims of pedigree hinged on the figure of Huineng, for he is the only disciple of the 5th patriarch Hongren who is portrayed in the *Zutangji* and *Jingde chuandeng lu* as still having living descendants at the end of the Tang.

According to fascicle 5 of the *Jingde chuandeng lu*, Huineng had 43 dharma heirs. Later in the text (in the latter part of fascicle 13), however, it becomes clear that most of those heirs (including Shenhui, whom Zongmi had identified as 7th patriarch) are treated as "separate branchings" (*biechu* [別出]) that died out within six generations. Only two of Huineng's dharma heirs are depicted as providing vital links to future generations: Nanyue Huairang (南嶽懷讓; 677–744 CE) and Qingyuan Xingsi (青原行思; ?–740). Nanyue's main disciple was Mazu Daoyi, and Qingyuan's was Shitou Xiqian (石頭希遷; 700–791 CE). *Jingde chuandeng lu* fascicles 6 through much of 13 consist entirely of biographies of Nanyue's spiritual descendants, lined up generation by generation, from the first (his immediate dharma heirs, including Mazu) all the way down through the ninth. Fascicles 14 through 26, likewise, consist entirely of biographies of Qingyuan's descendants, arrayed generation by generation, from the first (his immediate dharma heirs, including Shitou) down through the eleventh.

Mazu is said to have had 37 dharma heirs. The two that are most celebrated in the *Jingde chuandeng lu* are Nanquan Puyuan (南泉普願; 748–834 CE), who is credited with 17 dharma heirs of his own, and Baizhang Huaihai, who had 31 dharma heirs. Nanquan's most famous disciple is Zhaozhou Congshen (趙州從諗; 778–897 CE), who had 14 dharma heirs. Baizhang was the teacher of two key figures in the subsequent development of the lineage: Weishan Lingyou, with 42 dharma heirs, and Huangbo Xiyun (黃檗希運; ?–850 CE), with 12 dharma heirs. Weishan's leading disciple was Yangshan Huiji (仰山慧寂; 803–887 CE), who had 10 dharma heirs. Huangbo's most famous successor was Linji Yixuan, who was credited with 21 dharma heirs and revered in the Song as the founder of the dominant Linji Lineage (*Linjizong* [臨濟宗]).

Shitou, Mazu's counterpart in the major bifurcation of the Chan Lineage said to have taken place following the sixth patriarch Huineng, is credited with 21 dharma heirs. Among them, the two identified as most important in the *Jingde chuandeng lu* are Yueshan Weiyan (藥山惟儼; 751–834 CE), with 10 dharma heirs, and Tianhuang Daowu (天皇道悟; 748–807 CE). Yueshan's most significant heirs were Dongshan Liangjie (洞山良价; 807–869 CE) in the second generation and the latter's disciple, Caoshan Benji (曹山本寂; 840–901 CE), in the third. Tianhuang had but one dharma heir, but he provided a key link in the lineage because he was the ancestor of Xuefeng Yicun (雪峰義存; 822–908 CE), who inherited his dharma three generations later. Xuefeng is said to have had 42 dharma heirs. Among them, the two most heralded are Yunmen Wenyan (雲門文偃; 864–949 CE) and Xuansha Shibei (玄沙師備; 835–908 CE), whose "grandson" dharma heir was Fayan Wenyi (法眼文益; 885–958 CE).

The last four fascicles of the *Jingde chuandeng lu* are the only ones that do not consist of biographies of buddhas, patriarchs, and later members of the Chan Lineage. Fascicle 27 includes the biographies of ten "adepts of the *dhyāna* approach" (*chanmen dazhe* [禪門達者]) who, although they were not members of the Chan Lineage, were "famous in their day." The figures treated included Nanyue Huisi (南嶽慧思; 515–577 CE), Tiantai Zhiyi, and other prominent members of the Tiantai school. The fascicle appears to be a vestige of Zongmi's *Chanyuan zhuquanji*, which included the works of *dhyāna* masters who were not in Bodhidharma's lineage. Fascicle 28, which includes "sayings" (*yu* [語]) attributed to 12 eminent monks, is a precursor to the "discourse records" (*yulu* [語録]) genre, treated below. Fascicles 29 and 30 contain eulogies (*zan* [讚]), verses (*song* [頌]), *gāthās* (*jie* [偈]), poems (*shi* [詩]), inscriptions (*ming* [銘]), records (*ji* [記]), admonitions (*zhen* [箴]), and songs (*ke* [歌]), most attributed to members of the Chan Lineage. Those materials, too, are typical of miscellaneous writings that were later included in the discourse records of individual Chan masters.

The genealogical principles used in selecting and ordering the biographies that were included in the *Jingde chuandeng lu* clearly distinguished that text from large collections of "biographies of eminent monks", the well-known genre in which the biographies of individual monks were grouped according to their area of specialization in Buddhist practice (e.g. Vinaya experts, *sūtra* chanters, *dhyāna* practitioners, etc.). At the level of each individual entry, nevertheless, the *Jingde chuandeng lu* follows a pattern already established in the "biographies of eminent monks" genre, in which information is given about the subject's birth family, ordination, early training, successful attainment of some religious goal, career as a master in his own right, main disciples, death, and posthumous honors.

The *Jingde chuandeng lu*, however, also incorporates a new type of material that is scarcely found in the "biographies of eminent monks": numerous quasi-verbatim records of a Chan master's verbal exchanges – "questions and answers" (*wenda* [問答]) – with students and other interlocutors, both monk and lay. The *Jingde chuandeng lu* itself refers to such material as "words and phrases that served as timely interventions" (*jiyuan yuju* [機緣語句]). The idea is that the sayings or "devices" (*ji* [機]) of a Chan master respond appropriately to the mental

"circumstances" (*yuan* [縁]) of a disciple, as evinced in the latter's question, in an attempt to bring him to awakening. In English language scholarship, this distinctive type of Chan literature is often referred to as "encounter dialogue," a term coined by J. McRae (1986) as a translation of *jiyuan wenda* (Jpn. *kien mondō* [機縁問答]), which was a label often used by the eminent historian of Chan, Yanagida Seizan. In the *Jingde chuandeng lu*, the "encounter dialogues" attributed to individul Chan masters are juxtaposed with standard biographical data, but they are discrete units of text – comparable to multi-colored jellybeans in a jar – that are fundamentally disconnected from each other and from the chronological narrative frame that holds them together. Like jellybeans, the order in which the dialogues appear could be switched around, and a few could be added or removed, without changing the overall appearance or meaning of the biography in any significant way.

The following excerpts from the *Jingde chuandeng lu* biography of Chan master Nanquan Puyuan (南泉普願; 748–835 CE) provide a good example of that structural feature:

> Chan Master Nanquan Puyuan of Chizhou was a native of Xinzheng in Zhengzhou. His family name was Wang. In the second year of the Zhide era (757 CE) of the Tang, he became a novice monk under the tutelage of Chan Master Dahui of the monastery on Mount Dawei. When he was 30 he went to the monastic center on Mount Song and received full ordination. Initially he studied the old texts of the Xiangbu Vinaya school, and investigated the Vinaya collections. Next he traveled about to various lecture sites. Thus he heard the *Laṅkāvatārasūtra* and *Avataṃsakasūtra* preached, and delved into the "Middle," "Hundred Gate," and "Contemplation" *śāstras* [i.e. the three treatises of the Sanlun school], becoming well versed in their profound meaning. Subsequently he sought the guidance of Daji (大寂; i.e. Mazu Daoyi), immediately "forgot the fish trap" [of conceptual thought], and was able to roam freely in *samādhi*.
>
> One day when he was serving rice gruel to the saṅgha, Great Master Mazu asked, "What's in the bucket?" The teacher [Nanquan] said, "The old guy should shut his mouth and not make such talk." The other monks in training with him dared not ask anything about it.
>
> In the 11th year of the Zhenyuan era (795 CE) he gave up the life of a wandering monk and went to Chiyang, where he built himself a *dhyāna* retreat on Mount Nanquan and did not come down for more than 30 years. At the beginning of the Dahe era (827–835 CE) the government inspector in Xuancheng, Lord Lu, was favorably disposed towards Nanquan's teaching style. Consequently, he and the army supervisor invited the teacher to come down from the mountain and extended their courtesy in a manner befitting disciples. Nanquan greatly promoted Buddhist teachings, and from that time his followers never numbered less than several hundred. Word spread far and wide, and he was regarded as an extraordinary teacher…
>
> On one occasion the teacher said, "Last night during the third watch Mañjuśrī (*Wenshu* [文殊]) and Samantabhadra (*Puxian* [普賢]; two bodhisattvas whose images were enshrined) each got 20 blows of my staff and left the cloister." Zhaozhou [a famous disciple of Nanquan] asked, "But Master, who was it that was instructed by your staff?" The teacher retorted, "Tell me, then, wherein does old teacher Wang's [i.e. "my"] mistake lie?" Zhaozhou made prostrations to the teacher and left…
>
> One day the teacher ascended to the [dharma] hall [to give a formal sermon], carrying his bowl [as if gathering alms]. The venerable Huangbo [Nanquan's dharma nephew] was occupying the first seat [the place of the most senior monk in the assembly]. When he saw the teacher, he did not rise. The teacher asked him, "Elder, for how many years have you been training in the way?" Huangbo replied, "Since the time of the Buddha Kongwang [the first buddha to appear in a previous *kalpa*]. The teacher said, "Then you still are no better than old teacher Wang's [i.e. "my"] grandchild…"
>
> The teacher saw a monk cutting wood. The teacher knocked on the wood three times. The monk put down his axe and returned to the saṅgha hall. The teacher returned to the dharma hall. After a long while he came out and went into the saṅgha hall, where he saw the same monk sitting [in meditation] beneath his robe and bowl [i.e. at his own place on the meditation platform]. The teacher said, "Cheating and murder." The monk asked, "When you returned to the abbot's quarters, what were you indicating?" The teacher said, "Last night at the third watch the ox was lost; this morning at dawn the fire was lost."
>
> Once the monks of the east and west halls [the administrative branch and the practice branches of the monastery] were both claiming a cat. The teacher heard about it and told the monks, "If you can speak, the cat will be saved. If you cannot speak, the cat will

> be cut in two." The monks had no response, so the teacher cut it in two. When Zhaozhou returned from outside [the monastery], the teacher told him the story of what had happened. Zhaozhou immediately took off his sandals, put them on top of his head, and left. The teacher said, "You came just now. If you had been here, you would have saved the cat..."
>
> The teacher then announced that he was ill. In the eighth year of the Dahe period (834 CE), during the fifth watch on the 25th day of the 12th month, he endured until dawn, then proclaimed to his disciples, "The stars have been blurring my vision and the lamplights creating illusions for a long time now; do not say that I have any going or coming." With these words, he passed away. He was 87 years of age, and had been a fully ordained monk for 58 seasons. In the spring of the following year he was enshrined in a stūpa. (T. 2076 [LI] 257b18–259b4)

Altogether, this biography of Nanquan contains about 40 ostensibly verbatim records of the teacher's noteworthy "encounter dialogues," framed by the opening, middle, and closing sections that give biographical data concering his birth, training, career, and death. Although the dialogues are loosely related to one another by virtue of the fact that they all feature Nanquan, they are written in such a way that they can stand alone as independent narratives: each provides its own context, introduces its protagonists, and relates from beginning to end what transpired between them. As noted above, the order in which the dialogues appear is essentially random, and the biographical frame is inherently flexible, meaning that dialogues could be added or removed without impeding its function. That fact affords us insight into how the dialogues came to be added to flame history biographies in the first place. It also explains the ease with which certain dialogues, such as "Nanquan's cat," were lifted out of flame histories and presented as independent "old cases" (*guze* [古則]) in *kōan* collections.

The thousands of encounter dialogues that appear in the *Jingde chuandeng lu* exhibit certain noteworthy literary features, such as witty repartee and use of indirect speech. The typical exchange may begin with a straightforward question from a disciple concerning Buddhist doctrine or practice, but it quickly jumps to the level of metaphor, allusion, and innuendo. The responses that Chan masters give often appear to be non sequiturs, and they are punctuated at times by equally enigmatic shouts, blows, and other dramatic gestures (e.g. Nanquan's halving of the cat). Their words are often disconcerting, sometimes because they seem iconoclastic, antinomian, or sacrilegious, and sometimes because they appear to be utterly mundane or trivial. Nevertheless, it is assumed in the literature that all heirs to the Chan Lineage speak and act with the immediate authority of the buddha mind, so all of their sayings and doings, no matter how irrational or odd they may seem at first glance, are framed as spontaneous and profound expressions of their awakened insight.

Another salient feature of Chan encounter dialogue modeled in the *Jingde chuandeng lu* is its use of vernacular (or quasi-vernacular) language. The most widely read Buddhist texts in China prior to the rise of Chan were translations of Indian *sūtras* and *śāstras* that were laden with technical jargon, including many odd-sounding transliterations of Sanskrit terms. There were also scholastic commentaries that, while originally composed in Chinese, came across as stylistically inelegant and philosophically abstruse because they were struggling to deal with vocabulary, metaphors and syllogisms that had originated in Indian Buddhist literature. The success of the Chan school can be attributed, in part, to the fact that it portrayed its ancestors in the generations following Bodhidharma as buddhas (direct heirs to the "buddha mind") who were Chinese, whereas the buddhas and bodhisattvas celebrated in other forms of Buddhist literature were all foreigners from lands under "Western Skies," that is, India or Central Asia. Unlike Śākyamuni, who had a heavy foreign accent in translated *sūtras*, the "buddhas and ancestors'" of the Chan Lineage appear to speak in a natural, engaging, cultivated, and witty manner that resonated with the educated elites of China. They converse in colloquial Chinese and use down-to-earth metaphors to express Buddhist teachings, avoiding the literary language, highly technical vocabulary, and syllogistic style that characterizes many translated *sūtras* and *śāstras*. Their biographies, moreover, feature poems that express the insight they gained upon awakening, composed in good Chinese verse.

Encounter dialogues between masters and disciples in the *Jingde chuandeng lu* are all meant to dramatize "transmission of mind by means of mind," and they often do so by depicting Chan masters using indirect speech and/or nonverbal gestures as devices for instructing and testing their followers. Thus, despite the traditional claim to a signless or immediate (unmediated) transmission of dharma, by defying comprehension at the literal level the dialogues actually invite the reader to engage in

symbolic interpretation of the gestures and figures of speech that the protagonists employ. Sometimes what is symbolized, paradoxically, is the very futility of using symbols to convey the signless dharma. In numerous other cases, however, dialogues can only be rendered intelligible by interpretations that hinge on a knowledge of Mahāyāna *sūtra* and philosophical literature and standard Buddhist monastic procedures – the very "teachings" that the Chan Lineage is nominally independent of.

One final observation concerning the biographies of patriarchs and Chan masters included in the *Jingde chuandeng lu* is that they were compiled and used in a manner that reflected widespread Chinese modes of mortuary ritual and ancestor worship. In general, biographical writing in medieval China was a phenomenon associated with death and funerals, when eulogies were composed, and with the memorializing of ancestral spirits. Those spirits were venerated as bygone founders of clans (*jia* [家]) and perpetuators of family lineages (*zong* [宗]); they were held up as moral exemplars to be emulated by their offspring in later generations; and they were treated as really existing, other-worldly beings who could be called upon to aid and protect their descendants in the realm of the living. On the anniversaries of the death days of important ancestors, their portraits or mortuary tablets were placed on an altar as a "seat for the spirit" (*lingzuo* [靈座]). Offerings of food and drink were made to nourish (*gongyang* [供養]) the spirits, their biographies were read aloud, and their wishes were sometimes ascertained through various means of divination. Such memorial rites were led by the male head of the clan, who represented the living in bowing before the ancestors.

Precisely the same style of worship was directed to the ancestral teachers (*zushi* [祖師]) whose biographies were included in the *Jingde chuandeng lu* and later flame history collections. They too were celebrated as the founders and perpetuators of various living branches of the Chan family tree. They too were held up as exemplary figures whose words and deeds set a standard for emulation by their dharma heirs in the lineage. And, as spirits who were believed to exist and interact with their living descendants, they too were offered nourishment and prayed to for help and protection. Their mortuary portraits (*dingxiang* [頂相]) and spirit tablets (*weipai* [位牌]) were enshrined on altars in the ancestors halls (*zutang* [祖堂]) or ancestral shrines (*citang* [祠堂]) of Chan monasteries. Those buildings were modeled after mausoleums for the imperial dynasty and other great clans, and the memorial services that were held there on the monthly and annual returns of their death days featured narrative eulogies and offerings of food and drink that, despite the Buddhist context, were scarcely distinguishable from any other Chinese ancestral rites. The flame history biographies of Chan masters thus perpetuated, in their basic structure and function, the ancient Chinese involvement in funerary practices. The incorporation of "encounter dialogues" and other sayings within the biographies can even be interpreted as a way of enabling the ancestors to speak for themselves, in much the same way that spirits of the dead are given voice by mediums and other forms of divination in Chinese memorial rites.

The *Zutangji*, mentioned above as a likely source for the *Jingde chuandeng lu*, is regarded by Yanagida Seizan as the first of the full-blown "flame histories," for several reasons. First, it organizes its 246 biographies of ancestral teachers along exactly the same lines as the *Jingde chuandeng lu*, beginning with the seven buddhas and 33 patriarchs, and it features the same two main lines of descent from the sixth patriarch Huineng: the heirs of Nanyue Huairang and Qingyuan Xingsi. Moreover, the *Zutangji* is rife with the style of "encounter dialogue" that is common in the traditional (Song and later) histories but rarely found in texts datable to the Tang, and it assigns "transmission verses" to the early patriarchs, just as does the *Jingde chuandeng lu*. Yanagida was well aware that the existing text of the *Zutangji* in 20 fascicles, which was included in the printing of the Korean canon in 1245, was not identical with the original version of the text, which is said in the first preface to have been compiled in 952 CE. Nevertheless, he believed that the extant text is sufficiently similar in form and content to the original compilation to be regarded as a work that, on the whole, dates from the mid-10th century. If we could be certain that that was the case, then the *Zutangji* would be the oldest of what are defined herein as "traditional histories of the Chan Lineage."

However, Kinugawa Kenji (1998), Kim Tujin, J. Jorgensen (2005, 729–752), and other scholars have argued that the *Zutangji* as written in 952 CE consisted of but a single fascicle; that a much expanded 10 fascicle version was compiled early in the Song; and that the latter text was subsequently divided into 20 fascicles in order to facilitate its printing (by wood block) in conjunction with the Korean canon. The *Zutangji* as we now have it owes a great deal to Korean editors, and the biographies of a number of Korean monks were interpolated at the time of its printing in 1245, so the very features that mark the text as a traditional history could possibly have been added later, under the influence of the *Jingde chuandeng lu*. In any case, the *Zutangji* was soon eclipsed by the *Jingde chuandeng lu*. Although it was still known (by title, at least) in the 11th century to scholar monks such as Zhili (知禮; 960–1028) and Qisong (契嵩; 1007–1072), the text had been lost in China by the year 1103 (Yanagida, 1984b; 1594).

As time went on, the *Jingde chuandeng lu* was reedited and reissued in editions that supplanted the one first printed in 1009 (Yanagida, 1984c). It was also summarized, copied, and supplemented, but never entirely replaced, by a number of later flame histories, including:

1. *Chuandeng yuying ji* (傳燈玉英集; Excellent Collection of the Transmission of the Flame; Yanagida, 1983b), compiled by Chengxiang Wangsui (丞相王隨; dates unknown) in 1034;
2. *Tiansheng guangdeng lu* (天聖廣燈録; Tiansheng Era Record of the Spread of the Flame; ZZ 1553), completed by Li Zunxu (李遵勗; ?–1038) in 1036;
3. *Chuanfa zhengzong ji* (傳法正宗記; Record of the Main Lineage of Dharma Transmission; T. 2078), compiled by Fori Qisong (佛日契嵩; 1007–1072) in 1061;
4. *Jianzhong jingguo xudeng lu* (建中靖國續燈録; Jianzhong Jingguo Era Record of the Continuation of the Flame; ZZ 1556), compiled by Foguo Weibo (佛國惟白; dates unknown) in 1101;
5. *Chanlin sengbao zhuan* (禪林僧寶傳; Biographies from the Saṅgha Treasure of the Chan Community; ZZ 1560), compiled by Juefan Huihong (覺範慧洪; 1071–1128) between 1119 and 1124;
6. *Zongmen liandeng huiyao* (宗門聯燈會要; Outline of the Linked Flames of Our School; ZZ 1557), compiled by Huiweng Wuming (晦翁悟明; dates unknown) in 1183;
7. *Jiatai pudeng lu* (嘉泰普燈録; Jiatai Era Record of the Pervasive Spread of the Flame; ZZ 1558), completed by Leian Zhengshou (雷菴正受; 1146–1208) around 1204;
8. *Wudeng huiyuan* (五燈會元; Collated Essentials of the Five Flame [Records]; ZZ 1565), compiled by Huiming (慧明; dates unknown) and Dachuan Puji (大川普濟; 1179–1253) in 1252; and
9. *Wujia zhengzong zan* (五家正宗贊; Eulogies for [Ancestors in] the Five Houses of the True Lineage; ZZ 1554 [78]), compiled by Xisou Shaotan (希叟紹曇; dates unknown) in 1254.

In general, these later compilations added the biographies of Chan masters who had flourished in generations following the publication of the *Jingde chuandeng lu*, thereby updating its chart of the Chan Lineage. They also incorporated some older materials that the compiler and editors of the *Jingde chuandeng lu* had overlooked, and refined certain aspects of the Chan Lineage myth.

The *Tiansheng guangdeng lu*, for example, elaborated on the founding of the Chan Lineage in India by giving more quasi-historical details. It named the place where that occurred and depicted the face-to-face encounter that occasioned the Buddha's selection of Mahākāśyapa as his special dharma heir:

> When the Tathāgata was at Vulture Peak preaching the dharma, some devas made offerings of flowers. The World-Honored One held up a flower (*chi hua* [持華]) to instruct the assembly, and Kāśyapa smiled faintly (*wei xiao* [微笑]). The World-Honored One said, "I have the treasury of the true dharma eye (*zheng fayan zang* [正法眼藏]), the inconceivable mind of nirvāṇa, which I entrust to Mahākāśyapa. He should spread it and not allow it to be cut off in the future." (ZZ 1553 [LXXVIII] 428c2–5)

The point of the detail of "holding up a flower" was that the Buddha gave a wordless sermon that Mahākāśyapa understood and responded to in an equally wordless manner. The "true dharma eye" (*qingjing fayan* [清淨法眼]) mentioned here, a synonym of the "pure dharma eye" that appears in the *Jingde chuandeng lu* version of the story, is the eye of a buddha – an awakened being who sees things clearly and accurately. The "treasury" of the true dharma eye is a metaphor for the sum total of Buddha's ineffable wisdom, which takes precedence over the wisdom conveyed verbally in the scriptures that make up the Buddhist canon. A subsequent version of the story that appeared in *Zongmen liandeng huiyao*, compiled 150 years later, makes the point in an even more explicit manner:

> When the World-Honored One was at a gathering on Vulture Peak, he held up a flower (*nian hua* [拈花]) to instruct the assembly. Everyone in the assembly was dumbfounded except Kāśyapa, whose face broke into a faint smile. The World-Honored One said, "I have the treasury of the true dharma eye, the inconceivable mind of nirvāṇa, the real sign of which is its signlessness. This subtle dharma gate (*weimiao famen* [微妙法門]) does not rely on the written word (*bu li*

> *wenzi* [不立文字]). As a separate
> apart from the teachings (*jiao wai*

> *wenzi* [不立文字]). As a separate transmission apart from the teachings (*jiao wai biechuan* [教外別傳]), I entrust it to Mahākāśyapa." (ZZ 1557 [LXXIX] 14a6–8)

This was the full-blown story of the founding of the Chan Lineage that was henceforth accepted as orthodox.

By the middle of the Song, the idea had taken root among historians of the Chan lineage that the Tang and Five Dynasties periods had seen the flourishing of five houses of "branch lineages" (*wujia zongpai* [五家宗派]). The "five houses" that the traditional history eventually settled on were:

1. The Linji Lineage (*Linji zong* [臨濟宗]), founded by Linji Yixuan;
2. The Weiyang Lineage (*Weiyang zong* [潙仰宗]), which derived its name from its founder Weishan Lingyou and his disciple Yangshan Huiji;
3. The Caodong Lineage (*Caodong zong* [曹洞宗]), named after the sixth patriarch Huineng, the "Great Master of Caoxi" (*Caoxi dashi* [曹溪大師]), and Dongshan Liangjie, his dharma heir in the seventh generation (Yanagida, 2004, 7);
4. The Yunmen Lineage (*Yunmen zong* [雲門宗]), founded by Yunmen Wenyan; and
5. The Fayan Lineage (*Fayan zong* [法眼宗]), founded by Fayan Wenyi.

The oldest extant source to explicitly formulate this scheme of "five houses" is the *Rentian yanmu* (人天眼目; Eyes of Humans and Devas; T. 2006 [XLVIII] 333b21–22), published in 1188.

Because the work goes on to criticize several "false claims" made in this connection, it is evident that the make-up of the five houses was still a matter of dispute among historians at the time. By the end of the Song, however, the formulation promoted by the *Rentian yanmu* had become the unquestioned norm in the traditional history, and the category of "five houses" was used as a principle of organization in subsequent collections of historical documents. A text entitled *Wujia zhengzong zan* (五家正宗贊; Eulogies for [Ancestors in] the Five Houses of the Main Lineage; ZZ 1554), for example, was compiled by Xisou Shaotan (希叟紹曇; dates unknown) in 1254.

The last major branching of the Chan Lineage posited by Song historians was a division of the Linji Lineage into two offshoots stemming from Yangqi Fanghui (楊岐方會; 993–1046) and Huanglong Huinan (黃龍慧南; 1002–1069). These two lineages were added to the earlier grouping of five houses, thereby producing a list of "seven lineages". In the traditional histories, the slogan "five houses and seven lineages" (*wujia qizong* [五家七宗]) thus became a standard way of referring to all the branches of the Chan Lineage that stemmed from the sixth patriarch Huineng and still had living representatives at the start of the Song. By the end of the Song, however, all living Chan masters identifed themselves with either the Yangqi, Huanglung, or Caodong lineages. Those are also the lines through which all followers of the later respective Chinese, Korean, Japanese, and Vietnamese schools have traced their spiritual heritage from the Song down to the present.

The production of flame histories based on the Song and Yuan model continued unabated in later times, as followers of the Chan school added biographies of their own ancestors in more recent generations. Examples include:

1. *Xu chuandeng lu* (續傳燈録; Continued Record of the Transmission of the Flame; T. 2077), compiled in 1398;
2. *Chanzong zhengmo* (禪宗正脈; Main Bloodlines of the Chan Lineage; ZZ 1593), compiled around 1489;
3. *Wudeng yantong* (五燈嚴統; Rigorously Corrected Lineage of the Five Flames; ZZ 1568), published in 1654;
4. *Xudeng zhengtong* [續燈正統; Continued Flames of the True Succession; ZZ 1583), published in 1691; and
5. *Wudeng quanshu* (五燈全書; Complete Writings of the Five Flames; ZZ 1571), compiled in 1693.

Reasons for the Production of Chan Literature

Given the Chan school's claim to transmit the awakening of the Buddha from mind to mind (master to disciple) without relying on scriptures, a process that it compared to keeping the flame of a lamp alive by using it to light one or more other lamps, the production of any Chan texts at all might seem incongruous. It is a fact, however, that the Chan school churned out a body of literature that, over the course of many centuries, grew more massive by far than any of its frankly scholastic competitors – the Huayan (華嚴), Tiantai (天臺), and Lü (律) schools of Chinese Buddhism – that specialized in *sūtra* exegesis and Vinaya commentary. A number of reasons can be adduced for the prodigious output of Chan literature, but all of them are connected in a logical manner with the root mythology explained above.

To begin with, it is well to remember that "signless" (*wuxiang* [無相]) is itself a word: a signifier that works only within the medium of language. And the claim of the Chan school to transmit a signless, ineffable dharma is itself a narrative, the easy telling and comprehension of which was crucial to the successful formation of the school in the first place. Within that narrative, we have seen, even the Buddha Śākyamuni's public establishment of the Chan Lineage as a "separate transmission apart from the teachings" was depicted as a formal verbal declaration, at least after he got done with "holding up a flower" and noticing Mahākāśyapa's "faint smile." Both of those gestures, while ostensibly nonverbal, were themselves oft-repeated literary tropes that served to *symbolize* a wordless mind-to-mind communication. The Chan school's claim to "transmit mind by means of mind, without relying on the written word," in any case, was conveyed chiefly through the written word. What that slogan pointed to was not a rejection of literature in any literal sense, but an attitude of nonattachment to linguistic constructs even while employing them.

The literature of Chan, especially the "encounter dialogue" material, is deeply informed by the Madhyamaka doctrine of emptiness and its corrolary, the doctrine of two truths. These hold that "things" do not really have the properties of separate (clearly delineated), unitary, self-contained, and sustained existence that we assume in the process of naming them. From the standpoint of ultimate truth, therefore, all names and conceptual categories (including those employed in the Buddha's teachings) are false reifications. Nevertheless, at the level of conventional truth, those reifications function with varying degrees of effectiveness as practical tools for navigating the world, and language plays an indispensable role in formulating the doctrine of emptiness itself. Full comprehension of the latter results in liberation from deluded attachment to all the quasi-existent "things" that language posits, but it does not preclude the continued use of verbal teachings as skillful means for leading others to the same realization. This philosophical position helps account for the wordiness of the Chan tradition, which never ceased talking about (and signifying by literary and dramatic devices) what is wrong with words and other signs.

The outpouring of Chan literature in China, however, was also driven by a nexus of other, less philosophical, considerations. Chief among them were: political pressure to document the early lineage of patriarchs by compiling or manufacturing biographical data as historical evidence; the need to continually update the genealogical records by adding the biographies and recorded sayings of more recent generations of ancestral teachers; the worship and emulation of ancestral teachers, through memorial rites in which their spirits were nourished by offerings and the practice of selecting, reciting, and commenting on their most pithy sayings; and the habit of recording much of what living heirs to the Chan Lineage said in their capacities as monastery abbots, including public sermons and debates, semi-private instructions to disciples, and formal utterances (often in verse) made on all kinds of ritual occasions. Such recording was carried out by their disciples, in anticipation of their future enshrinement in both the physical and the literary "ancestor halls" of the Chan Lineage.

Because the mind dharma purportedly transmitted to China by Bodhidharma was said to be signless, there was in principle no way of demonstrating that a person had actually "inherited the dharma" from a bona fide member of the lineage, save by the keeping of quasi-genealogical records. The qualifications of monks belonging to other schools of Buddhism could readily be tested, either by verbal quizzing on points of doctrine or by demanding a demonstration of mastery of ritual procedures. Such tests, however, relied on the kinds of overt and verifiable "signs" (*xiang* [相]) of spiritual attainment that the Chan school explicitly disavowed in its foundational myth. If a monk who claimed to be an heir in the Chan Lineage refused to respond to a verbal query or perform a ritual, he could not (in theory) be discredited on that account. If, however, there were no written records that proved the monk's place in the lineage of Bodhidharma, no demonstration of knowledge or ability could suffice to prove that he was a genuine heir to the mind dharma.

From the start (in the 8th-cent. proto-histories), the claims that various groups of Chinese Buddhist monks made to represent a special Bodhidharma Lineage were advanced in the form of quasi-genealogical records that were modeled after collections of ancestral biographies kept by aristocratic clans (*zong* [宗]). Familial biographies were hagiographical in the sense that they glorified the founding patriarch (*zu* [祖]) of a clan and celebrated his heirs (all male) in succeeding generations, holding them up for emulation by living descendants and establishing them as objects of worship in ancestral rites performed on the anniversaries of

their deaths. The genealogies compiled by Buddhist monks who presented themselves as dharma heirs in a spiritual "bloodline" (*xiemai* [血脈]) founded by Bodhidharma took a similar form, with a biography provided for each ancestral teacher in the main line of descent. The biographies were careful to document the direct interactions of masters and disciples in the lineage, and as time went on they increasingly included ostensibly verbatim records of short exchanges that had taken place between them. Just as one oil-burning lamp can only light the wick of another if the two are brought closely together, such personal contacts were deemed necessary for the mind-to-mind transmission of dharma to occur.

A factor that drove the initial compilation of Bodhidharma Lineage records in the Tang and continued to stimulate research and writing within the Chan school of the Song was the opposition of monks whose prestige and legitimacy were not based primarily on such genealogical claims, but rather on their mastery of Buddhist texts and practices. Those monks, labeled by their Chan opponents as followers of "teachings houses" (*jiaojia* [教家]), did not take kindly to the thrust of the Chan Lineage story, which implied that anyone not privy to the mind dharma (i.e. awakening) it supposedly conveyed was necessarily mired in a degraded, scripture-dependent, hearsay version of the subtle dharma originally taught by the Buddha Śākyamuni. "Teachings" monks could retort that the real ignoramuses were members of the Chan Lineage, but the latter were artfully shielded by the principle of "signlessness" from direct challenges to their knowledge of or competency in the teachings and practices of the Chinese Buddhist tradition at large. Nevertheless, the audacious claim that an exclusive line of masters and disciples had conveyed the Buddha's awakening down to the present in an unbroken series of "individual transmissions" (*danchuan* [單傳]) was open to criticism on the grounds of its dubious historicity, and opponents demanded documentary proof. Early proponents of the Bodhidharma Lineage thus found themselves in the ironic position of desperately searching the Buddhist canon for shreds of historical evidence that could be used to counter critics who argued that the story of the Buddha's separate transmission to Mahākāśyapa was apocryphal. The *Baolin zhuan*, cited above, adduced scriptural evidence (e.g. in the *Mahāparinirvāṇasūtra*) for its account of that event (Foulk, 1999, 227–230), and followers of the Chan school in the Song evidently forged a *sūtra* that appeared to document the Buddha's act of "holding up a flower": *Da fantianwang wenfo jueyi jing* (大梵天王問佛決疑經; *Sūtra* of the Great King of Brahma Heaven Asking the Buddha to Resolve His Doubts; ZZ 26, 27; Foulk, 1999a, 276–280). Such literary machinations reflect the fact that proponents of the Bodhidharma Lineage were always in competition with other elements within the Buddhist order for religious legitimacy, lay patronage, and control of monastic institutions.

During the Song and Yuan dynasties, the abbacies of many prestigious public (i.e. imperially sanctioned) Buddhist monasteries in China were restricted to monks who were recognized as living heirs in the Chan Lineage. That resulted in a demand for proof of pedigree that drove the ongoing compilation of Chan genealogical records. Earlier "flame histories" had to be periodically updated by supplementary collections that appended the biographies of subsequent generations of dharma heirs.

Moreover, the habit arose of recording much of what living heirs to the Chan Lineage said in their capacities as monastery abbots, including public sermons and debates, semi-private instructions to disciples, and formal utterances (often in verse) made on all kinds of ritual occasions. Such recording was carried out by their disciples, in anticipation of their future enshrinement in both the physical and the literary "ancestors halls" of the Chan Lineage. This too, contributed greatly to the continual expansion of the corpus of Chan literature, especially the genre of "discourse records."

Sometime in the Song, Chan masters began to give their disciples "inheritance certificates" (*sishu* [嗣書]) that traced their particular line of descent from Śakyamuni Buddha and served as proof of dharma transmission. In theory, such diplomas were only to be granted in recognition of the fact that a disciple had "seen the [buddha] nature" (*jianxing* [見性]), that is attained awakening (*kaiwu* [開悟]). As a practical matter, however, a disciple could not gain such validation without demonstrating his mastery of the literature of Chan: the sayings of the most celebrated ancestors in the lineage. The "sign" of a Chan master, in short, became the ability to comment spontaneously and incisively on famous "encounter dialogues," especially when called upon to do so in a ritual setting. As explained below, this led to the formation of *kōan* collections.

It is true that, in the Chan scheme of things, the words that come out of a buddha's mouth are ultimately inadequate expressions of the awakened mind that inspires them, regardless of what language they are voiced in. Nevertheless, the utterances of Śākyamuni had been recorded for posterity, forming as they did a vast canon of sacred literature. From the Chan school's point of view, the sayings of its native Chinese buddhas were worthy of the same treatment. Indeed, when the disciples of a Chan abbot recorded whatever he said in formal monastic settings, year after year, they were inspired in that practice by the precedent set by the Buddha's disciple Ānanda, who reported the contents of all the Blessed One's sermons, beginning with the attestation, "Thus have I heard. . . ." The expression "treasury of the true dharma eye", which in the myth of the founding of the Chan Lineage was used as a synonym for the "inconceivable mind of nirvāṇa," came to be understood as another name for a "Chan canon" (*Chanzang* [禪藏]) of sacred literature: a native Chinese analogue to the treasury of *sūtras* spoken by the Indian Buddha.

Discourse Records

Discourse records (*yulu* [語録]) are works that purport to "record" (*lu*) the "sayings" (*yu*) of ancestors in the Chan lineage in China. In contrast to the individual biographies found in flame history collections, which are restricted in length because they share space with hundreds of others, discourse records are basically stand-alone texts that are able to include far more teachings attributed to their subjects. Indeed, the works that bear this label often give the impression that they incorporate all the sermons, dialogues, and writings of the featured Chan master that were available to the compilers after his death. Some discourse records, accordingly, bear the title "extensive record" (*guanglu* [廣録]). Many discourse records contain some incidental biographical information about their subjects, such as details of their travels, but that is mainly due to the convention of identifying, in as much detail as possible, the particular locations where, and occasions on which, their words were spoken. The unstated premise of the genre is that the words attributed to a Chan master and his interlocutors were recorded verbatim by immediate disciples who were present at the time they were spoken, whether or not those disciples were the final compilers or editors of the work.

The large-scale production of discourse records was something that began in the Song, following a basic model that is evident in the last three fascicles of the *Jingde chuandeng lu*. Fascicle 28 of that work contains twelve texts that are identified as the "sayings" of the following Chan masters, presented separately from their biographies: National Teacher Nanyang Huizhong (南陽慧忠); Great Teacher Heze Shenhui (荷澤神會); Chan Master Daji [Mazu] Daoyi (大寂道一); Reverend Yueshan Weiyan (藥山惟儼); Reverend Dazhu Huihai (大珠慧海); National Teacher Dada Wuye (大達無業); Reverend Nanquan Puyuan (南泉普願); Reverend Zhaozhou Congshen (趙州從諗); Reverend Linji Yixuan (臨濟義玄); Great Teacher Xuansha Zongyi Shibei (玄沙宗一師備); Reverend Luohan Guichen (羅漢桂琛); and Chan Master Dafayan Wenyi (大法眼文益). It seems that the editors of the *Jingde chuandeng lu* were not treating these records of "sayings" simply as appendices to the biographies that appeared earlier, although the texts did serve that function, but also as a device for signalling the special importance in the formation of the Chan Lineage of the ancestral teachers who were featured. The sayings of Zhaozhou and Xuansha exhibit some signs of the "encounter dialogue" style of repartee, but the teachings of the other Chan masters are rather discursive and philosophical: using standard classical Chinese, they treat such matters as merit, expedient means, the buddhahood of insentient things, and the nature of Vimalakīrti's silence. The style and content of those teachings suggest that they originated in the Tang as written treatises, and that the editors of the *Jingde chuandeng lu* reframed them as the spoken words of abbots who had "ascended the [dharma] hall" (*shangtang* [上堂]) to engage an audience in public debate, or as "instructions to an assembly" (*shizhong* [示衆]) of monks. The editors attributed colloquial Chinese expressions, such as "what?" (*shimo* [什麼]) and "in such a way" (*renmo* [恁麼]), to the masters, bringing the debates more in line with the Song notion of what Chan "questions and answers" (*wenda* [問答]) should sound like. Some of the interlocutors are identified as "dharma masters" who specialize in *sūtra* exegesis, Vinaya masters, or "prelates" (*zuozhu* [座主]) of the Tiantai or Huayan schools, none of whom are sympathetic to the Chan approach. All are depicted as being confounded in their debates with the Chan masters.

As time went on, the "encounter dialogue" style of dramatic verbal and nonverbal expression became the norm for all ancestral teachers, past and present, and some of the figures honored with separate "sayings" in the *Jingde chuandeng lu* were supplied with more elaborate discourse records that better met those expectations:

1. *Jiangxi mazu daoyi chashi yulu* (江西馬祖道一禪師語録; Discourse Record of Chan Master Mazu Daoyi of Jiangxi; ZZ 1321; critical ed. and trans. Iriya, 1984);
2. *Dunwu rudao yaomen lun* (頓悟入道要門論; Treatise on the Essential Gate of Entering the Way via Sudden Awakening; ZZ 1223; critical ed. and trans. Hirano, 1970; trans. Blofeld, 1972), attributed to Dazhu Huihai;
3. *Chizhou Nanquan Puyuan chanshi yuyao* (池州南泉普願禪師語要; Essential Sayings of Chan Master Puyuan of Nanquan in Chizhou; ZZ 1315 [68] 69a10 ff.);
4. *Zhaozhou zhenji chanshi yulu* (趙州眞際禪師語録; Discourse Record of Chan Master Zhenji of Zhaozhou; ZZ 1315 [68] 76a10 ff.; critical ed. and trans. Akizuki, 1972; trans. Hoffmann, 1978; Green, 1998);
5. *Zhenzhou Linji Huizhao chanshi yulu* (鎮州臨濟慧照禪師語録; Discourse Record of Chan Master Linji Huizhao of Zhenzhou; T. 1985, ZZ 1315 [68] 23a15 ff.; critical ed. and trans. Akizuki, 1972a; trans. Watson, 1993; Sasaki, 2009); and
6. *Jinling Qingliangyuan Wenyi chanshi yulu* (金陵清凉院文益禪師語録; T. 1991).

Other ancestral teachers of the Tang and Five Dynasties who were deemed important in the Song eventually received similar discourse records:

1. *Pang jushi yulu* (龐居士語録; Discourse Record of Layman Pang; ZZ 1336; critical ed. and trans. Iriya, 1973; trans. Sasaki, Iriya & Fraser, 1971);
2. *Hongzhou baizhangshan dazhi chanshi yulu* (洪州百丈山大智禪師語録; Discourse Record of Chan Master Dazhi of Mount Baizhang in Hongzhou; ZZ 1322; trans. Cleary, 1978);
3. *Weishan Lingyou chanshi yulu* (潙山靈祐禪師語録; Discourse Record of Chan Master Lingyou of Mount Wei; T. 1989);
4. *Huangboshan Duanji chanshi chuanxin fayao* (黃檗山斷際禪師傳心法要; Essentials of the Transmission of Mind by Chan Master Duanji of Mount Huangbo; T. 2012A; critical ed. and trans. Iriya, 1969; trans. Blofeld, 1958);
5. *Yuanzhou Yangshan Huiji chanshi yulu* (袁州仰山慧寂禪師語錄; Discourse Record of Chan Master Huiji of Mount Yang in Yuanzhou; T. 1990);
6. *Ruizhou Dongshan Liangjie chanshi yulu* 瑞州洞山良价禪師語録; Discourse Record of Chan Master Liangjie of Mount Dong in Ruizhou; T. 1986B; trans. Powell, 1986);
7. *Fuzhou Caoshan Benji chanshi yulu* (撫州曹山元證禪師語錄; Discourse Record of Chan Master Yuanzheng of Mount Cao in Fuzhou; T. 1987A); and
8. *Yunmen Kuangzhen chanshi guanglu* (雲門匡眞禪師廣錄; Extensive Records of Chan Master Kuangzhen of Yunmen; T. 1988; trans. App, 1994).

The compilation of these works, which took place in the Song and later, was essentially a historiographical undertaking, for it involved working with documents that had been handed down from the past and scanning them for sayings that were (or could be) plausibly attributed to the featured Chan master. In a few instances, it was the existence of a sizable body of interesting sayings that had helped make the master an important figure in the lineage in the first place; the records of Huangbo, Huihai, Layman Pang, and Yunmen are examples of this. In many cases, however, it was the place of a Chan master in the genealogical record, as established by the flame histories, that made him a key figure who needed a discourse record. Chan historians struggled to cobble together materials for Dongshan Liangjie, for example, and finally attributed an ancient text entitled *Baojing sanmei* (寶鏡三昧; Jewel Mirror *Samādhi*; T. 1986A [XLVII] 515a16 ff.) to him. Proper discourse records for him and Weishan Lingyu did not appear until the Ming dynasty (1368–1644).

Whatever their provenance, full-blown discourse records of the figures whom modern scholars regard as giants of the "golden age" of Chan come down to us in editions that date from no earlier than the 12th century, and sometimes much later. Because the works were embellished with "encounter dialogue" material, and because they were organized along lines that reflected the ritual duties of abbots in the Song and Yuan, they cannot be used, uncritically, as reliable sources for the history of the Chan school in the Tang and Five Dynasties periods. Some modern scholars, aware of those pitfalls, have worked to identify the few materials that can be judged with some certainty to predate the Song (e.g. Yanagida, 1984, 1985; App, 1994; Jia, 2006; Poceski, 2007).

The production of discourse records for eminent Chan masters who flourished in the eight or ten generations following the sixth patriarch Huineng gave Song historians of the Chan Lineage the idea that the six Chinese patriarchs (Bodhidharma through Huineng) should have suitable "sayings" of their own. For Huineng, that function was served by the *Liuzu dashi fabao tanjing* (六祖大師法寶壇經;

Dharma Jewel Platform *Sūtra* of the Great Master Sixth Patriarch; T. 2008; trans. Price, 1969) a text that comes down to us in a 1291 edition, but was known in the Song in an edition (now lost) by Qisong (契嵩; 1007–1072). The fifth patriarch Hongren was assigned a text entitled *Zuishangsheng lun* (最上乘論; Treatise on the Supreme Vehicle; T. 2011 [XLVIII] 377a15 ff.), and the third patriarch Sengcan was said to have authored the *Xinxin ming* (信心銘; Inscription on Faith in Mind; T. 2010). Bodhidharma was well known, from Daoxuan's *Xu gaoseng zhuan*, to have authored a text that the *Jingde chuandeng lu* calls the *Dasheng rudao sixing* (大乘入道四行; [Two] Entrances to the Way and Four Practices of the Mahāyāna; T. 2076 [LI] 458b7 ff.; trans. Red Pine, 1987, 3–7). That text, however, summarizes the Mahāyāna approach to Buddhist practice in a rather conventional way that lends no support whatsoever to the later image, projected onto Bodhidharma, of a Chan master who "simply transmitted mind by means of mind." Thus, several texts that were products of the movement to redefine *dhyāna* that swept the world of Chinese Buddhism in the 7th and 8th centuries were attributed to Bodhidharma:

1. *Damo dashi wuxing lun* (達磨大師悟性論; Great Master Bodhidharma's Treatise on the Awakened Nature; T. 2009 [XLVIII] 370c11 ff.; ZZ 1219; trans. Red Pine, 1987, 47–75);
2. *Damo dashi poxiang lun* (達磨大師破相論; Great Master Bodhidharma's Treatise on Breaking Free of Signification; T. 2009 [XLVIII] 366c18 ff; ZZ 1220; trans. Red Pine, 1987, 77–113); and
3. *Anxin famen* (安心法門; Dharma Gate of Calming the Mind; T. 2009 [XLVIII] 370a29 ff.).

There is also a work that seems to have been custom-made as a discourse record for Bodhidharma, with plenty of "question and answer" exchanges on the topic of "transmitting mind by means of mind without setting up scriptures", namely the *Damo dashi* (達磨大師血脈論; Great Master Bodhidharma's Treatise on Bloodlines; T. 2009 [XLVIII] 373b12 ff.; X 1218; trans. Red Pine, 1987, 9–45).

Although followers of the Chan school in the Song and later regarded all these texts as the oldest and most revered of ancestral teachings, they scarcely fit the mold of the discourse record genre that was established at the time for Chan masters of the "golden age," that is, in the generations following Huineng.

The great majority of surviving discourse records, in any case, feature monks who flourished in the Song and Yuan. The *Taishō* edition of the Buddhist canon and the "Zen school section" of the *Dainippon zokuzōkyō* contain lengthy discourse records for more than 150 Chan masters from those times. Most are identified as dharma descendants of either Huanglong Huinan or Yangqi Fanghui, retrospectively honored as the founders of the two main branches of the Linji Lineage. In the latter half of the Song, the dharma heirs of Yuanwu Keqin (圜悟克勤; 1063–1135) and Dahui Zonggao (大慧宗杲; 1089–1163), two prominent figures in the Yangqi line, are especially well represented by discourse records. A number of records also exist for patriarchs in the Caodong lineage in the generations following Danxia Zichun (丹霞子淳; ?–1119) and Hongzhi Zhengjue (宏智正覺; 1091–1157). The production of discourse records of Chan masters continued unabated in China down through the Ming and Qing (1644–1912) dynasties.

The circumstances of the compilation of the discourse records of Song and Yuan masters are relatively transparent because the subjects were the abbots of major monasteries whose disciples carefully noted down whatever they said in a variety of formal and semi-formal ritual and pedagogical settings, over the course of many years. The disciples anticipated (or at least hoped) that their teachers would someday join the ranks of eminent ancestors for whom the existence of a discourse record was essential. The internal arrangement of most discourse records directly reflect the Song and Yuan monastic settings (e.g. the buildings and schedules of activities) in which the featured Chan masters flourished. As noted above, when dealing with the records of famous Tang ancestral teachers, Song and Yuan editors tended to organize them along those same lines, with the result that the works are filled with seemingly realistic details that, to the critical eye of a historian of Chinese Buddhist monastic institutions, are clearly anachronistic.

There is variation in the contents of individual discourse records, but certain conventions exist in the genre as a whole for categorizing the sayings and writings of Chan masters. The various headings under which their sayings are classified in discourse records include:

1. "Ascending the hall" (*shangtang* [上堂]). This signifies that the master, as abbot, was giving a formal public talk from the high lecture seat in a dharma hall (*fatang* [法堂]) at the time when he spoke the words that are recorded in the text. Sayings on the occasion of ascending the hall include

discursive sermons, brief remarks, verses recited in conjunction with rites (e.g. prayers for the emperor), and dialogues in which the master engages members of the audience in apparently freewheeling questions and answers;

2. "Lesser convocations" (*xiaocan* [小參]) in the abbot's quarters (*fangzhang* [方丈]), where the abbot lectures disciples on matters of spiritual training and monastic discipline;
3. "Instructions to the assembly" (*shizhong* [示衆]), consisting of admonitions directed to all the monks in communal training in a monastery's saṅgha hall (*sengtang* [僧堂]);
4. "Instructions" (*shi* [示]) to individuals or small groups of monks, such as "instructions to the cook" (*shi dianzuo* [示典座]) or "instructions to Chan followers" (*shi chanzhe* [示禪者]);
5. "Critical examinations" (*kanbian* [勘辯/辨]), or dialogues in which Chan masters test the capacities of individual monks, such as new arrivals (*xindao* [新到]) at a monastery;
6. "General sermons" (*pushuo* [普說]), or informal talks intended to be accessible to general audiences that include lay people;
7. "Comments on old cases" (*jugu* [舉古], or *niangu* [拈古]). Old cases (*guze* [古則]) are brief anecdotes or dialogues excerpted from the biographies of ancestral teachers and treated as discrete expressions or encapsulations of their awakened minds. Chan masters who flourished in the Song and later frequently commented on old cases that they or their students "raised" (*ju* [舉]) or "held up" (*nian* [拈]) as topics for discussion in various formal settings;
8. "Dharma phrases" (*fayu* [法語]), or verses recited by an abbot in conjunction with monastic rituals (e.g. services for the emperor, the installment of a new abbot);
9. "Buddhist rites" (*foshi* [佛事]), or verses recited by an abbot in ritual contexts, often funeral services for eminent monks; and
10. "Records of activities" (*xinglu* [行録]). Biographical data, including anecdotes and dialogues, pertaining to a master's early career, travels away from his monastery, or interactions with disciples in informal monastery settings (e.g. sitting around a fire, working in the fields).

These classifications all pertain to teachings of Chan masters that were ostensibly delivered orally. In style they range from the lengthy and discursive to the brief and enigmatic, employing language that runs the gamut from the relatively formal and philosophical to slang and scatology. The unstated premise of the texts is that the sayings were recorded verbatim, perhaps by the abbot's acolytes (*shizhe* [侍者]) who were charged with transcribing formal talks in the dharma hall and abbot's quarters.

In addition to sayings, discourse records incorporate a variety of miscellaneous writings attributed to Chan masters, classified as follows:

1. "Verses" (*jiesong* [偈頌]) and "songs" (*gesong* [歌頌]). These designations cover a variety of short writings in formal verse style. Some treat miscellaneous themes (e.g. a master's illness, his appreciation of a landscape painting). Others, marked as having been presented to individual disciples or patrons, comment on the latter's character or insight. Still others, listed under the heading "verses on old cases" (*songgu* [頌古]), are written commentaries on selected *kōans*;
2. "Portrait eulogies" (*zhenzan* [眞贊]). The texts of "eulogies" (*zan* [贊]) that a Chan master inscribed on a "portrait" (*zhen* [眞]), the subjects of which include buddhas, bodhisattvas, arhats, various lesser deities, ancestral teachers in the Chan Lineage, and occasionally prominent lay persons. "Self eulogies" (*zizan* [自贊]) are eulogies inscribed by a master on his own portrait, as requested by disciples or patrons who commissioned those works;
3. "Letters" (*shu* [書]). A Chan master's personal correspondence with disciples, lay patrons, government officials, and so on;
4. "Last instructions" (*yijie* [遺誡]). A spiritual "will" composed by a Chan master before his death, containing admonitions for his dharma heirs in all subsequent generations; and
5. "Miscellaneous compositions (*zazhu* [雜著]). Writings left by a Chan master that do not fit any of the preceding categories (e.g. stūpa inscriptions, prefaces to other authors' texts).

From the 12th century on, the practice arose of gathering the discourse records of multiple Chan masters into larger collections. An early example is a work entitled *Gu zunsu yuyao* (古尊宿語要; Essential Sayings of Old Worthies; lost) in four fascicles, compiled by Sengting Shouze (僧挺守賾; dates unknown), a disciple of Zhu'an Shigui (竹庵士珪; 1083–1146), and published in 1144. Only the table of contents (*mulu* [目録]; ZZ 1316) survives, but it shows that the text contained the discourse records of some twenty ancestral teachers who lived from the Tang through the early Song. The *Xu Gu zunsu yuyao* (續古尊宿語要; Supplement to the Essential Sayings of Old Worthies; ZZ 1317) in six fascicles, compiled by Huishi Shiming (晦室師明; dates unknown) and published in 1238, contains the records of 82 additional Chan masters who flourished from the Tang down through the Song. Both collections were a source of material for the *Chongke Gu zunsu yulu* (重刻古尊宿語録; Reissue of Discourse Records of Old Worthies; ZZ 1315) in 48 fascicles, compiled in 1267 by Juexin (覺心; dates unknown), which contains 36 discourse records of eminent masters who lived from the 8th through the 13th centuries. These large collections are somewhat similar to the flame histories in that they contain the records of numerous ancestral teachers, but they are not intended to provide detailed biographical information or to map out all the branches in the Chan family tree. Their purpose, rather, is to assemble an "all star" cast of Chan masters.

Several other collections of discourse records seem to have been compiled to glorify one or another branch of the Chan Lineage:

1. *Huanglong sijia lu* (黃龍四家録; Records of Four Masters of Huanglong; ZZ 2–25–2), preface dated 1141, contains the records of Huanglong Huinan, his dharma heir Huitang Zuxin (晦堂祖心; 1025–1100), Huitang's heir Sixin Wuxin (死心悟新; 1043–1114), and Sixin's heir Chaozong Huifang (超宗慧方; 1173–1129);
2. *Ciming sijia lu* (慈明四家録; Records of the Four Masters of Ciming; nonextant), known from a surviving preface dated 1153 (ZZ 1338A), contained the discourse records of Shishuang Chuyuan (石霜楚圓; also known as Chan master Ciming [慈明禪師]; 986–1039), his dharma heir Yangqi Fanghui, Yangqi's heir Baiyun Shouduan (白雲守端; 1025–1072), and Baiyun's heir Wuzu Fayan (五祖法演; ?–1104); and
3. *Shijia yulu* (四家語録; Discourse Record of the Four House Masters; ZZ 1320 [69]) in six fascicles, also known as Mazu shijia yulu (馬祖四家語録; Discourse Record of the Four House Masters of Mazu), contains discourse records for Mazu Daoyi, his dharma heir Baizhang Huaihai, Baizhang's heir Huangbo Xiyun, and Huangbo's heir Linji Yixuan. The text survives in an edition published in 1607, but is mentioned by title in a 12th-century catalogue.

Kōan Collections

Beginning in the 10th century, when Chan abbots took the high seat on the Sumeru altar (*xumitan* [須彌壇]) in a dharma hall to instruct an assembly of monk and lay followers, a formal rite known as "ascending the hall", it became common practice for them to "raise"– that is, to quote in full, or just allude to – some pithy saying or enigmatic dialogue drawn from the ancestral sayings records as a topic for discussion. They would challenge anyone in the audience to comment on the dialogue in a way that demonstrated their understanding, and would comment themselves if others were unable to do so. Conversely, disciples and other members of such assemblies began to raise ancestral sayings as topics for Chan masters to explain and comment on. We know of these developments from sources such as the *Extensive Record of Chan Master Yunmen Kuangzhen* (App, 1994, 53–57) and the *Zutangji*, originally compiled in 952 CE. Dialogues of ancestral teachers that were repeatedly raised in dharma hall convocations and other instructional settings, thus becoming stock topics of commentary and debate, were called "ancient precedents" (*guze* [古則]). They also came to be referred to metaphorically as "court cases" (*gong'an* [公案]): literally, legal documents that sat on a "magistrate's" (*gong* [公]) "bench" (*an* [案]). The implication of that trope was that a Chan master had the power to sit in judgment on the sayings of his predecessors, or at least to judge other people's understanding of them.

The practice of "raising old cases" (*jugu* [舉古]), either as a way of eliciting a master's wisdom or testing a student's level of insight, gave rise to another major genre of Chan literature: the *kōan* (*gong'an* [公案]) collection. As noted above, many discourse records dating from the mid-11th century and later include sections entitled "verses on old cases" (*songgu* [頌古]). It was common for Chan masters to write verse comments (*song* [頌]) and prose evaluations (*pingchang* [評唱]) on "ancient precedents" that they found particularly interesting. Unlike the records of verbal remarks on *kōans*, the convention with written comments was to quote the topic dialogues in their entirety. This may indicate that the ancestral sayings selected for comment were not previously well known, or it may simply have been a device that enabled the reader to compare the topic cases and commentarial verses side by side and thus better appreciate the wit and subtlety of the latter. Whenever a number of cases with verses attached are grouped together in a discourse record it can be said that they constitute what we today would call a *kōan* collection, although it may not be clear who actually put the collection together – the Chan master featured or some later compiler of his writings. Nor is it clear from the discourse records just how such collections were used. They may have served

---

as a means of instructing disciples, or they
been written by Chan masters for their ov
tion, or for posterity.

The "root cases" (*benze* [本則]) foun
collections are almost all dialogues extra
or less arbitrarily, from the flame histo
phies and discourse records of this or t
tral teacher. Although such collections
of "critic's choice" of favorite cases selec
compiler from the vast repetoire of Ch
records, with attached verse comments
evaluations that represent his own distin

The "root cases" (*benze* [本則]) found in *kōan* collections are almost all dialogues extracted, more or less arbitrarily, from the flame history biographies and discourse records of this or that ancestral teacher. Although such collections are a kind of "critic's choice" of favorite cases selected by the compiler from the vast repetoire of Chan sayings records, with attached verse comments and prose evaluations that represent his own distinctive point of view, when they remain embedded in discourse records they do not stand out as an entirely separate genre of Chan literature.

There were, however, a number of *kōan* collections that circulated as self-contained publications, thereby gaining a wide readership and helping to establish the genre proper. An outstanding example is the *Wumen guan* (無門關; Gateless Barrier; T. 2005), a collection of 48 old cases selected by Wumen Huikai (無門慧開; 1183–1260), who added a prose evaluation and verse comment to each. Other examples include:

1. *Chanzong songgu lianzhu tongji* (禪宗頌古聯珠通集; Pearl String Collection of Verses on Old Cases from the Chan Lineage; ZZ 1295), in 40 fascicles;
2. *Chanmen zhuzushi jiesong* (禪門諸祖師偈頌; Verses by Ancestral Teachers of the Chan School; ZZ 1298);
3. *Chanlin leiju* (禪林類聚; Grouped Sayings from the Chan Tradition; ZZ 1299), in 20 facscicles; and
4. *Zongmen niangu huiji* (宗門拈古彙集; Collection of Comments on Old Cases from the [Chan] Lineage; ZZ 1296), in 45 fascicles.

Once certain *kōan* collections began to circulate as independent texts, a few of them became objects of an additional, secondary level of commentary added by another Chan master. The most famous example is the *Biyan lu* (碧巖錄; Blue Cliff Record; T. 2003; trans. Cleary, 2005), a collection of one hundred *kōans* with verse and prose comments by Xuedou Zhongxian (雪竇重顯; 980–1052) that was subsequently subjected to another layer of commentary (on both the root cases and Xuedou's remarks) by Yuanwu Keqin, resulting in a highly complex literary production. Other examples include:

1. *Wansong laoren pingchang Tiantongjue Heshang songgu Congrong an lu* (萬松老人評唱天童覺和尚頌古從容録]; Congrong Hermitage Record: Old Man Wansong's Evaluations of Tiantong Xue's Verse Comments on Old Cases; T. 2004), commonly called the Congrong lu (從容録; Congrong Record; trans. Cleary, 1990);
2. *Foguo jijie lu* (佛果擊節録; Foguo's Commentarial Record; ZZ 1301); and
3. *Linquan laoren pingchang Touzi Qing heshang songgu konggu ji* (林泉老人評唱投子青和尚頌古空谷集; Empty Valley Collection: Old Man Linquan Evaluations of Master Touzi Qing's Verses on Old Cases; ZZ 1303), commonly called the Konggu ji (空谷集; Empty Valley Collection).

Even as *kōan* collections were emerging as a distinct literary genre, there was a backlash of sorts against what was perceived to be an overly intellectual tendency to merely play with the words of the ancestral teachers without grasping their true significance. A figure who later came to be emblematic of that reaction was Chan master Dahui Zonggao, a dharma heir of Yuanwu Keqin – the final author of the *Biyan lu*. Dahui was certainly not opposed to *kōan* collections, for he compiled a huge one of his own, entitled *Zhengfayan zhang* (正法眼藏; Treasury of the True Dharma Eye; X 1309). Completed in 1147, the work incorporated 661 cases drawn from the sayings records of ancestral teachers in all of the "five houses," with Dahui's prose evaluations and "capping phrases" (*zhuoyu* [著語]) attached. Nevertheless, Dahui is remembered as the father of what came to be called the "Chan of contemplating sayings" (*kanhua chan* [看話禪]), a form of meditation that entails continuosly "looking at" or "contemplating" (*kan* [看]) a particular "saying" (*huatou* [話頭]) attributed to an ancestral teacher, with the aim of freezing the mind, exhausting the discursive intellect, and breaking through it to a deeper level understanding. The sayings used were drawn from root cases found in *kōan* collections, but they were truncated in a way that discouraged the practitioner from thinking about the meaning of the case (dialogue between master and disciple) as a whole. Thus, for example, disciples were instructed to focus their attention exclusively on the single word *wu* (無; lit. does not have/does not exist) that was uttered by Chan master Zhaozhou when he was asked by a monk, "Does a dog have buddha nature, or not?" Because "*wu*" and similar sayings from root cases function somewhat like the punch line of a joke, bringing the listener up short, scholars have translated *huatou* as "keyword" or "critical phrase." Dahui and his followers taught that by focusing relentlessly on the *huatou* and not giving up even when utterly frustrated and blocked, one could penetrate the barrier of conceptual thinking and realize the awakened state of mind of the ancestral teacher who uttered the saying in the first place. At that point, an appropriate comment to the *kōan* it came from would spontaneously and effortlessly cross ones lips and be approved by one's teacher.

Dahui and his followers recommended "contemplating sayings" as a practice that could be pursued in the midst of any activities, but seem to have stressed seated *dhyāna* (*zuochan* [坐禪]) as an especially good setting for it. In any case, they critized a mode of seated *dhyāna* that did not make use of *kōans*: the so-called "Chan of silent illumination" (*mozhao chan* [默照禪]) that was taught by Dahui's contemporary and rival, Chan master Hongzhi Zhengjue. Silent illumination, as it is usually interpreted, entails quieting (*mo* [默]) the mind so that the innate buddha nature shines forth or is illuminated (*zhao* [照]). Because Dahui belonged to the Linji Lineage and Hongzhi was heir to the Caodong Lineage, the idea has long circulated (within both traditional monastic and modern academic circles) that Linji Chan makes use of *kōans* and Caodong Chan does not. In point of fact, Hongzhi and other members of the Caodong Lineage – most notably Dōgen (道元; 1200–1253), revered as the founder of Sōtō Zen in Japan – were actively engaged in commenting on old cases, using them to instruct and test their disciples, and compiling *kōan* collections of their own. Two *kōan* collections left by Hongzhi became the basis for works of full-blown secondary commentary similar in structure to Yuanwu's *Biyan lu*. The real difference between the Caodong approach and the Linji approach following Dahui was that the former continued to use *kōans* in a traditional manner, as sacred literature to be studied and commented on, and did not directly connect that activity with the practice of seated *dhyāna*. Linji masters also perpetuated those traditional modes of engagement with *kōan* literature, but in addition they embraced the novel use of truncated ancestral sayings as devices for focusing and calming (*zhi* [止]) the mind, especially in seated *dhyāna*, in support of the cultivation of insight (*guan* [觀]).

Other Traditional Histories

Most Chan literature produced in the Song, Yuan, and later belongs to one of the three main genres discussed above: flame histories, discourse records, and *kōan* collections. There are, however, a number of miscellaneous works that are not readily subsumed under any of those three classifications but may nevertheless be regarded as histories of the Chan Lineage.

One such work is the *Zongjing lu* (宗鏡録; Records that Mirror the Source; T. 2016) in 100 fascicles, completed in 961 CE by Yongming Yanshou (永明延壽; 904–975 CE). The work was inspired by Zongmi's *Chanyuan zhuquanji* (Broughton, 2009, 24–26), and it embraced Zongmi's vision of multiple lineages stemming from Bodhidharma. It also perpetuated Zongmi's view that the "mind dharma" vouchsafed from Śākyamuni to Bodhidharma through the line of ancestral teachers in India was not just the original "source" (*zong* [宗]) of the Chan records produced in China, but the source of the teachings found in the *sūtras*, as well. Like Zongmi, in short, Yanshou believed that the sayings of the Buddha Śākyamuni and those of the Chan ancestral teachers all flowed from what was essentially the same awakened mind, and thus could not be at odds in any fundamental way. Accordingly, in conjunction with the huge number of quotations in the *Zongjing lu* that Yanshou drew from "120 books of sayings of [Chan] ancestors," he also cited countless passages from "120 Mahāyāna *sūtras*" and "60 collections by learned monks" (T. 2016 [XLVIII] 924a14–16) to prove his points.

Other miscellaneous compositions that treat the history of the Chan Lineage include, for example:

1. *Linjianlu* (林間録; Record of Monastic Groves; ZZ 1624), preface dated 1107, compiled by Chan master Huihong Juefan (慧洪覺範; 1071–1128);
2. *Zuting shiyuan* (祖庭事苑; Chrestomathy from the Ancestors Hall; ZZ 1261), compiled by Muan Shanqing (睦菴善卿; dates unknown) in 1108 and published in 1154; and
3. *Rentian yanmu* (人天眼目; Eyes of Humans and Gods; T. 2006) compiled by Huiyan Zhizhao (晦巖智昭; dates unknown) in 1188.

In general, these are collections of Chan lore compiled by monks for their own individual purposes, which included teaching students and weighing in on controversial historiographical issues.

Proto-Histories of the Chan Lineage

Proto-histories may be divided into two types: (1) texts containing lineages of ancestral teachers that prefigure, in some way, the Chan Lineage scheme that became orthodox in the Song; and (2) texts that historians of the Chan Lineage from the Song down to the present have regarded as

source materials because they contain
data for monks who have traditionally b
members of the Chan Lineage.

Modern scholars (e.g. Yanagida,
1986), in their research on the origins a
ment of the Chan school in China, hav

source materials because they contain biographical data for monks who have traditionally been deemed members of the Chan Lineage.

Modern scholars (e.g. Yanagida, 1967; McRae, 1986), in their research on the origins and development of the Chan school in China, have focused on early texts that represent attempts to formulate lineages of Bodhidharma, and even earlier ones that may have inspired or provided material for such formulations. Their focus, in essence, has been on documents that are precursors to the full-blown account of the Chan Lineage found in the archetypal traditional history, the *Jingde chuandeng lu*.

Among the various "*dhyāna* scriptures" (discussed above) that appeared in Chinese down through the 5th century CE, the *Damoduoluo chan jing*, translated by Buddhabhadra (350–429 CE), states that:

> After the death of the Buddha, the Venerable Mahākāśyapa, Venerable Ānanda, Venerable Madhyāntika, Venerable Śāṇavāsa, Venerable Upagupta, Venerable Vasumitra, Venerable Saṃgharakṣa, Venerable Dharmatrāta, and so on down to Venerable Puṇyamitra – all holders of the dharma, took this lamp flame of wisdom (*huideng* [慧燈]) and transmitted it in sequence. (T. 618 [XV] 301c6–10)

Because the text speaks of a "transmission of the flame" through a lineage of venerable Indian monks, some of whom figure in the traditional (Song) Chan Lineage, it is clearly a "proto-history," and is probably the oldest one in existence.

A preface to the *Damoduoluo chan jing* written by Lushan Yuan (廬山遠; Huiyuan of Mount Lu; 334–416 CE), moreover, is cited in the aforementioned epitaph for the monk Faru, which names him as the sixth in a line of ancestral teachers stemming from Bodhidharma. The followers of Faru may have gotten the idea of a "transmission from master to disciple in India essentially without scriptures" from the *Damoduoluo chan jing*, and may have tried to identify Bodhidharma (known to them Daoxuan's *Xu gaoseng zhuan*) with the figure of Dharmatrāta.

A proto-history entitled *Fu fazang yinyuan zhuan* (付法藏因縁傳; Record of the Transmission of the Dharma Collection; T. 2058), translated in 472 CE, posited a list of 23 Indian ancestors that was subsequently used to trace Bodhidharma's lineage back to the Buddha Śākyamuni. That text tells how, after Śākyamuni's entry into nirvāṇa, his dharma collection was compiled by his disciples, led by Mahākāśyapa. It relates how Mahākāśyapa, before he died, entrusted the dharma collection to Ānanda, who in turn passed it on to Śaṇavāsa, and so on down through 23 generations, culminating with a monk named Siṃha. The *Jingde chuandeng lu* and its direct precursor, the *Baolin zhuan*, name Siṃha as number 24 in their list of 28 Indian patriarchs, a list that is obviously indebted to the *Fu fazang yinyuan zhuan*. That created a problem for proponents of Bodhidharma's lineage in the Tang and Song, however, for the latter text explicitly states that the "face to face transmission of the dharma was cut off" when Siṃha was beheaded during a suppression of Buddhism by an evil king of Kashmir (T. 2058 [L] 321c17–18).

The proto-histories of the Chan Lineage that have had the greatest impact on the modern field of Zen studies are manuscripts discovered at Dunhuang in early 20th century:

1. *Chuan fabao ji* (傳法寶紀; Record of the Transmission of the Dharma Treasure; T. 2838), edited by Dufei (杜朏) sometime after 713 CE (critical ed. and trans. Yanagida, 1971; trans. McRae, 1986, 255–269);
2. *Lengqie shizi ji* (楞伽師資記; Record of Masters and Disciples of the Laṅkāvatāra; T. 2837), written by Jingjue (淨覺) between 719 and 720 CE; critical ed. and trans. Yanagida, 1971; trans. Cleary, 1986, 19–78);
3. *Lidai fabao ji* (歷代法寶記; Record of the Dharma Jewel Through the Generations; T. 2075), composed shortly after 775 CE (critical ed. and trans. Yanagida, 1976a; trans. Adamek, 2007);
4. *Putidamo nanzong ding shifei lun* (菩提達摩南宗定是非論; Treatise Determining the Truth of Bodhidharma's Southern Lineage; Ma Junwu, 1970), written by Shenhui (for a summary of works by Shenhui, see Yampolsky, 1967, 24n67); and
5. *Nanzong dunjiao zuishangsheng mohe boruo boluomi jing liuzu Huineng dashi yu Shaozhou Dafansi shifa tanjing* (南宗頓教最上大乘摩訶般若波羅蜜經六祖惠能大師於韶州大梵寺施法壇經; Great Perfection of Wisdom *Sūtra* of the Supreme Vehicle, which is the Sudden Teaching of the Southern Lineage: the *Platform Sūtra* of the Great Teacher Huineng, Sixth Patriarch, who Gave the Dharma at the Dafan Monastery in Shaozhou; T. 2007; critical ed. and trans. Nakagawa, 1976; trans. Yampolsky, 1967; Red Pine, 2006), written between 781 and 801 CE.

These works (summarized by Yampolsky, 1967, 5–46) shed much light on the competition to lay claim to the spiritual legacy Bodhidharma that took place among the various sodalities of *dhyāna* practitioners discussed by Zongmi. What is at stake in all of them is the question of who the legitimate heirs to Bodhidharma were in the one or two generations following the fifth patriarch Hongren. The *Chuan fabao ji*, *Lengqie shizi ji*, and *Lidai fabao ji* are prototypes of the flame history genre that flourished in the Song, for they line up the biographies of ancestral teachers in gemealogical order. The work by Shenhui, *Lidai fabao ji*, and *Platform Sūtra* are noteworthy because they posit lineages of Indian patriarchs based on the *Damoduoluo chan jing* and/or *Fu fazang yinyuan zhuan*.

The *Baolin zhuan* in 10 fascicles, as mentioned above, is the proto-history (compiled in 801 CE) that provided the version of Bodhidharma's lineage (the 28 Indian and 6 Chinese patriarchs) that was adopted in the *Jingde chuandeng lu* and became an unchallenged orthodoxy thereafter. The text was suppressed and lost in China during the Song, and therefore known to early modern scholars only through brief citations and the appearance of its title in catalogues dating from the 9th century. However, in 1933, fascicles 1–5 and 8 were rediscovered in China and published in Japan. Study of the text indicates that it was produced by followers of the Hongzhou lineage of Mazu, which was one of the two main lines of descent from Huineng featured in the *Ancestor's Hall Collection* and *Jingde chuandeng lu*.

The *Chanyuan zhuquanji duxu*, discussed in detail above, is but one of the texts by Zongmi that may be regarded as proto-histories of the Chan Lineage. Two others especially worthy of mention are:

1. *Yuanjuejing dashu chao* (圓覺經大疏鈔; Extracts from the Great Commentary on the Sūtra of Perfect Awakening; ZZ 245), written in 823 or 824 CE; and
2. *Zhonghua chuanxindi chanmen shizi chengxi tu* (中華傳心地禪門師資承襲圖; Chart of the Master-Disciple Succession of the Dhyāna Gate that Transmits the Mind Ground in China; ZZ 1225), written between 830 and 833 CE.

In his *Yuanjuejing dashu chao*, Zongmi claims that the "mind dharma" had been secretly transmitted from Siṃha to his heir Śaṇavāsa and on down to Bodhidharma, implying that what had been cut off when (as stated in the *Fu fazang yinyuan zhuan*) Siṃha was killed was only the transmission of "*sūtras* and *śāstras*" (ZZ 245 [9] 532a8–9). His list of Indian ancestors was close to that posited in the *Lidai fabao ji*, not the one found in the *Baolin zhuan* and later taken up by the *Jingde chuandeng lu*. Zongmi's *Zhonghua chuanxindi chanmen shizi chengxi tu* treats five lines of descent from Bodhidharma:

1. the Ox Head Lineage (*Niutouzong* [牛頭宗]);
2. the Northern Lineage (*Beizong* [北宗]) of Shenxiu;
3. the Southern Lineage (*Nanzong* [南宗]) of Huineng;
4. the Heze Lineage (*Hezezong* [荷澤宗]) of Shenhui, which he regards as the main line of descent from Huineng; and
5. the Hongzhou Lineage (*Hongzhouzong* [洪州宗]) of Mazu, which he describes as a collateral offshoot from Huineng.

Biography and Hagiography

Epistolary Literature

According to our present knowledge, it was only in the 3rd century BCE, during Aśoka's reign, that writing began in India. Therefore, letters could not have been written earlier (von Hinüber, 2010, 266). Whereas no original Indian letter of Aśoka's time is extant, the scarce indications of official letters written by the Maurya administration were collected by O. von Hinüber, who refers to "covering letters" in connection with Aśoka's Rock and Pillar Edicts and written messages that were conveyed by *dūtas* (emissaries), following the example of Hellenistic kings (von Hinüber, 2010, 262–265). The purpose of these messages was to spread Aśoka's *dhammavijaya* (victory of the *dhamma*).

In the history of Indian literature, the genre *lekha* (letter, epistle) is not known, but letters are, for instance, found in dramas such as Viśākhadatta's *Mudrārākṣasa* (*Rākṣasa* and the Signet Ring; before 500 CE) in which a letter bearing a seal is intercepted. We read: "According to the right order: from somewhere somebody informs some high-ranking personality" (*MuRā.* 5.9–10; trans. von Hinüber, 2010, 261), showing that at least some regulations for official letters must have existed. Kauṭilya describes in the *Arthaśāstra* (2.10) how edicts (*śāsana*) and official documents (*lekha*) should be written, how different matters should be treated and formulated, and how they should be concluded by the word *iti* (in this manner, thus) and the subscript "These are the words of so and so."

Buddhist teachers and scholars used several literary forms to give moral and ethical advice in order to convey the Buddhist dharma. The *lekha* (Tib. *spring yig*) belongs to this didactic genre along with the *subhāṣita* (well-spoken words), *kathā* or *parikathā* (advice), and *nirdeśa* (instruction) and flourished from the 2nd to the 12th century in India and Tibet, where it was a convenient means for the dissemination of Buddhist teaching. Whereas only one letter, Candragomin's *Śiṣyalekha* (Letter to a Disciple), is preserved in the original Sanskrit (Hahn, 1999, 54–130), 12 letters are transmitted in the *spring yig* section of the Tibetan Tanjur (see Dietz, 1984, 4–11). One of these letters, the *Suhṛllekha* (Letter to a Friend) by Nāgārjuna, was translated three times into Chinese: (1) by Guṇavarman (T. 1672; *Longshu pusa wei chantuojiawang shuofa yaoji* 龍樹菩薩為禪陀迦王説法要偈) in 431 CE, (2) by Saṅghavarman (T. 1673; *Quanfa zhuwang yaoji* 勸發諸王要偈) in 434 CE, and by Yijing (T. 1674; *Longshu pusa quanjiewang song* 龍樹菩薩勸誡王頌) in 673 CE, showing the high esteem in which this genre was held.

Since *lekha* (epistle) as a genre of Sanskrit literature was not known in India, the structure of epistles was by far not as formalized as that of governmental documents and official or business correspondence (Strauch, 2002). The *Śiṣyalekha* of Candragomin is significantly called a *dharmakāvya* (dharma poem) in the colophon, in which the term "dharma" may have the meaning of the Buddhist dharma as well as of virtue and morality, and was composed according to the literary theory and principles prevailing at Candragomin's time (Hahn, 1998, lxi–lxiv; Lienhard, 1984, 1–4, 45–52). Compared to other epistles, Candragomin's is unmatched in its application of the artistic, poetical features of the *kāvya* genre with regard to style as well as in terms of the expression of sentiment and ideas.

According to Greek and Latin rhetorical art (*ars dictaminis*), the prescript of a letter is divided into three parts: the salutation (*salutatio*), the naming of the sender (*intitulatio*), and the naming of the addressee (*inscriptio*). The prescript is followed by a tripartite introduction (*exordium* or *prooemium*) aiming at arousing attention (*attentum facere*), winning the benevolence of the addressee (*benevolum facere*), and inducing the desire to listen (*docile facere*). The final part of the letter is divided into conclusion and valediction (*vale dicere*; see Dietz, 1984, 101–113).

Although the structure of the Indian *lekha* is not as formalized as that of the Greek and Latin epistle, some of the above described components are found in the *lekha* too. The salutation consists of the praise of the Buddha and/or of the addressee. The name of the addressee is mentioned not only in the introductory verses of four epistles but also in the main text of two other epistles. The name of the sender appears in the introductory verses of only two *lekha*s and in two others in the final part. The reason or purpose of the letter is mentioned either in the introduction or, in one case, in the final part. The tripartite

© Koninklijke Brill NV, Leiden, 2015
Also available online – www.brill

introduction occurs as a feature of the Buddhist epistle too. Similarly, the final part of the epistles has three divisions: emphasis on the usefulness of the instruction, advice to follow the instruction, and valediction. This structure shows that the *lekha* is used as a didactic means to convey Buddhist teaching, instruction, and personal advice by a sender in the position of a spiritual guide and teacher (*guru*). Whereas the beginning and end of Indian Buddhist letters show the abovementioned common features, the content of the instruction varies according to the addressees.

The 12 *lekha*s contained in the Tibetan Tanjur were written between the 2nd and 12th century CE. The earliest letters were translated during the first period of Tibetan translations in the 8th and 9th centuries.

*Suhṛllekha

The **Suhṛllekha* (Letter to a Friend; Tib. *Bshes pa'i phrin yig* [Friendly Letter]; see Warder, vol. II, 1974, ch. 879) by Nāgārjuna (2nd cent. CE), which consists of 123 stanzas in the *āryāgīti* meter, is the earliest epistle. According to the colophon, the *Suhṛllekha* was addressed by Nāgārjuna (Klu sgrub) to his friend King Śātavāhana (Bde spyod). The friendship of Nāgārjuna with Śātavāhana is well documented in Indian (e.g. Bāṇa's *Harṣacarita*; see Führer, 1909, 332) as well as in Chinese and Tibetan sources (see Dietz, 1983, 62). In Tibet the **Suhṛllekha* has enjoyed a widespread popularity since it was translated by Sarvajñadeva and Dpal brtsegs in the 8th or 9th century. This is evidenced by numerous quotations from and commentaries on it, and also by an early copy of the **Suhṛllekha* with interlinear commentaries from Mahāmati's *Vyaktapadāsuhṛllekhaṭīkā* (Commentary on the *Suhṛllekha* that Contains Clear Words) among the Dunhuang manuscripts (IOL Tib J 646; Dietz, 2012). The earliest quotations are found (preserved only in Tibetan) in Candrakīrti's *Catuḥśatakaṭīkā* (Commentary on [Āryadeva's] Four Hundred [Verses]; 7th cent.; see Lindtner, 1982, 218) and Jitāri's *Cittaratnaviśodhanakrama* (Gradual Course of Purification of the Mind Jewel; see table in Dietz, 1984, 531), but no Sanskrit quotations from the **Suhṛllekha* are available. According to Yijing's record of his travels in India, the **Suhṛllekha* was very popular in the 7th century as an intelligible, concise, and comprehensive summary of Buddhist doctrine and practice in India (Dietz, 1983, 62).

The **Suhṛllekha* nowhere refers to Nāgārjuna's Madhyamaka philosophy and only occasionally refers to Mahāyāna (vv. 2, 8, and 115–123). The purpose is to teach a way to nirvāṇa and to salvation from the cycle of rebirth (saṃsāra). Nāgārjuna follows the standard Buddhist expositions closely. The most important Buddhist concepts are listed and explained according to canonical literature in verses 4–64 (Lindtner, 1982, 219–224), in a sermonizing and admonitory style, characterized by verbs in imperative or gerundive mode in order to request the observance of virtues and the avoidance of vices. In verses 65–103, seven evils of the cycle of rebirth are described. Here a narrative style prevails, and the evils of the hells are illustrated in frightful colors. In verses 104–114, the positive factors that are conducive to nirvāṇa are explained. The epistle concludes with verses 115–118, which consist of exhortation and advice, and with verses 119–123, in which the gradual attainment of nirvāṇa is presented as the result of obeying the aforementioned advice. In these concluding verses, the influence of Mahāyāna doctrine is clearly manifest. In verses 119–123, the rejoicing in the virtue (*puṇyānumodana*) of all beings and the dedication of one's own merit to other beings (*pariṇāmana*) are declared as necessary for the achievement of buddhahood. Before one attains nirvāṇa, one will be like the bodhisattva Avalokiteśvara through the power of one's compassionate actions and will proceed to a buddha field and become a protector of the world like the buddha Amitābha.

*Mahārājakaniṣkalekha

The **Mahārājakaniṣkalekha* (Letter to the Great King Kaniṣka; Tib. *Rgyal po chen po Ka nis ka la springs pa'i 'phrin yig*; see Dietz, 1984, 37–45; Hahn, 1998, xxvii–xxxviii; Warder, 1974, chs. 900–902) was written by Mātṛceṭa (2nd cent. CE), a younger contemporary of Nāgārjuna and, according to Yijing's record (Hartmann, 1987, 12–22), well known in India in the 7th century as the foremost composer of hymns (*stotra*). We do not have any Sanskrit version of the **Mahārājakaniṣkalekha*, which is believed to be Mātṛceṭa's last work. It comprises 85 stanzas and was translated into Tibetan by Vidyākaraprabha and Rin chen mchog and revised by Dpal brtsegs, all of whom worked at the time of King Khri srong lde'u btsan (755–795 CE; see below).

In verse 1, we read that Mātṛceṭa has to decline Kaniṣka's invitation because of his bad health and old age, and in verse 3, he declares the following: "I have largely taught what I have to teach" (trans.

author). From this it appears that Mātṛceṭa was an old and wise man who wrote to the young ruler of the Kushana dynasty (v. 49). The style of the letter is very personal and simple. In contrast to Nāgārjuna, Mātṛceṭa avoids the technical terms of systematic Buddhist teaching. He expresses the Buddhist teaching in his own words and uses similes and other figures that make his message attractive and easy to understand. After the introductory verses 1–5, Mātṛceṭa advises Kaniṣka to avoid the three evils that lead to ruin: "Sense objects that arouse pleasure, youth-yielding pride, and action just as it pleases oneself" (vv. 6–8). The king and his ministers should accept the advice of wise men and hear the dharma (vv. 9–16). In verses 17–40, Mātṛceṭa encourages the young ruler to abide by the law. In verses 41–48, he asks the ruler to reestablish the tradition of ancient kings and seers, to protect the earth through the law, and to abdicate in old age in order to practice the holy dharma. In verse 49, he admonishes the king, who was born in the lineage of the Kushanas and educated according to the Buddhist dharma, to prevent the decline of the "religious system of the solar race [= Śākyamuni's line], the noble lineage." In verses 50–63, Mātṛceṭa expresses his main concern: the king should be aware that death can happen at any moment and that in death, his former actions will be his only companions. In verses 64–78, he requests the king to have compassion for animals and avoid killing them. In the concluding verses 79–85, Mātṛceṭa asks the king to accept his advice, if he thinks it is useful, and to lead a virtuous life in order to enjoy a long and blissful reign.

Śiṣyalekha

The *Śiṣyalekha* (Letter to a Disciple; Tib. *Slob ma la springs pa'i spring yig*) was written by Candragomin (5th cent. CE; see Dietz, 1984, 7–9, 31–37; Hahn, 1998, xxxix–lxxiv; Warder, 1977, §1286), a renowned grammarian and poet. He follows the example of his two predecessors with regard to the structure, but in his technique, he was influenced by contemporary Sanskrit poetry, as he artfully used alliteration, paronomasia, similes, metaphors, and various meters (see Hahn, 1998, liff.). The *Śiṣyalekha*, which is called in the colophon the *Śiṣyalekhanāmadharmakāvya* (The Dharma Poem Called Letter to a Disciple), is the only epistle preserved in Sanskrit and comprises 116 stanzas. There are parallels between the *Śiṣyalekha* and the **Suhṛllekha* (*ŚiL.* 35–40 = *SuL.* 91–97; *ŚiL.* 41–59 = *SuL.* 77–88; *ŚiL.* 78–81, 83 = *SuL.* 70–74, 99) and between the *Śiṣyalekha* and the **Mahārājakaniṣkalekha* (*ŚiL.* 66 = *MKL.* 56). The *Śiṣyalekha* was translated in Tibetan by the abovementioned Sarvajñadeva and Dpal brtsegs. In the Tibetan Tanjur, we find along with the translation of the *Śiṣyalekha* two commentaries: Vairocanarakṣita's **Śiṣyalekhaṭippaṇa* and Prajñākaramati's **Śiṣyalekhavṛtti*. The name of the addressee is not mentioned in the letter, but it is found in the commentaries, where the related stories might be fictitious and influenced by the content of the letter. According to Vairocanarakṣita, Candragomin wrote this letter in order to prevent the enthronement of his disciple, the prince Ratnakīrti. According to Prajñākaramati, Candragomin tried to prevent the apostasy of one of his disciples, who had broken his monastic vows out of love for a princess.

The *Śiṣyalekha* begins with eight verses of praise to the Buddha (vv. 1–5), his dharma (vv. 6–7) and his saṅgha (v. 8). Stanzas 9–18 give instructions for the apostate from the Buddhist doctrine and describe the evil consequences of apostasy. Verses 19–93 discuss the right view of existence by describing the suffering of human existence (vv. 19–26), death (vv. 27–34), hungry ghosts (vv. 35–40), and the hells (vv. 41–59). Verses 60–77 explain that right conduct is necessary in human existence, the highest form of existence, in order not to undergo future unfavorable rebirths. Verses 68–72 describe the merits of ascetic life, and in verses 73–77, sensual pleasures are condemned. In verses 78–83, the suffering of the existence as a god is described, and in verses 84–90, the striving for worldly happiness is disapproved of. All forms of existence have been experienced more than a hundred times (vv. 91–93). Mahāyāna doctrines are dealt with in the final verses. The good man should work for the welfare of others in order to release them from saṃsāra (vv. 94–98). The highest bliss is to bear the suffering of others and to assure their happiness and prosperity (vv. 94–106). The epistle ends with exhortations, in imperative clauses, to follow the Buddha's teaching and give up sensual pleasures (vv. 107–112) and with the wish of the author that his letter be universally blissful and that everyone attain enlightenment through this teaching (vv. 113–116).

While the following epistles are influenced by the style and structure of these earlier letters, their content has changed in so far as specific and personal problems of the addressee are discussed.

*Āryāvalokiteśvarapreṣitabhikṣuprakāśakumāralekha

The *’Phags pa Spyan ras gzigs dbang phyug gis dge slong Rab gsal gzhon nu la springs pa’i phrin yig* (Letter Sent to the Monk Rab gsal gzhon nu by the Noble Avalokiteśvara; Dietz, 1984, 12–18; 132–141; Hahn, 1998, 197–199), a letter that comprises just 11 stanzas, was translated by Sarvajñadeva and Dpal brtsegs. It is the first *lekha* in the section *Spring yig* of the Tibetan Tanjur. In the prose introduction, we are told that Avalokiteśvara and the monk Rab gsal gzhon nu had taken the vow to strive for enlightenment. Avalokiteśvara informs Rab gsal gzhon nu that he has attained enlightenment and wants to help him realize liberation by virtue of the Mahāyāna doctrine for the welfare of all beings. He exhorts his friend to carefully listen to his words (vv. 1–3). The monk Rab gsal gzhon nu answers with a prayer to Avalokiteśvara, in which he asks for instruction (vv. 4–11). As can be seen from this précis, the relevant teaching of Avalokiteśvara is missing in this letter. Therefore, this letter might be a fragment of a longer letter, or it was meant as introduction to the *Spring yig* section.

*Duḥkhaviśeṣanirdeśa

The *Lho za mo Tshangs pa’i dbyangs la sdug bsngal brgyad kyi bye brag bstan pa* (Instruction on the Eight Kinds of Suffering for Lho za mo tshangs pa’i dbyangs; Dietz, 1984, 74–78, 340–357; Hahn, 1998, 199–299) was written by Kamalaśīla, a pupil of Śāntarakṣita (c. 723–787 CE; see Kollmar-Paulenz, 2006, 42). Kamalaśīla was invited to Tibet during the reign of Khri srong lde’u btsan (755–797 CE) and defended Indian Buddhism against Mahāyāna Hva Shang, a Chinese follower of the Chan school, during the famous debate at the Bsam yas Monastery in c. 792–794 CE. The addressee, Lho za mo Tshangs pa’i dbyangs, is not found in other sources, and it is unclear whether the addressee is male or female. Since no translators are mentioned in the letter, either in the beginning or in the colophon, this letter might have been originally written in Tibetan. The *Duḥkhaviśeṣanirdeśa* was included in the *Spring yig* section of the Derge and Cone Tanjur editions only. It is called *nirdeśa* (Tib. *bstan pa*; instruction) in its title, but while *nirdeśa* and *parikathā* are closely related in content with the genre of *lekha* (see Dietz, 1984, 93–101), they do not contain a personal address as the *Duḥkhaviśeṣanirdeśa* does. The letter must have been composed during Kamalaśīla’s stay in Tibet between the death of Śāntarakṣita (787 CE) and his own death in 795 CE.

After a short prose introduction in which the pupil asks for instruction on the characteristics of suffering in the cycle of rebirth, Kamalaśīla begins his instruction with the exhortation that his dharma teaching be heard (vv. 3–4). The description of each of the eight kinds of suffering (vv. 1, 7–25) ends with the refrain, “There is no possibility to bear this suffering.” In verse 26, the eight sufferings are identified with the five aggregates (that are the basis) of clinging (to existence [*upādānaskandha*]). The way out of the aforementioned sufferings is taught in the concluding verses (27–30).

*Bhoṭasvāmidāsalekha

The *Rje ’bangs dang Bod btsun rnams la spring yig* (Letter to the Ruler, Subjects, and Nobility of Tibet; Dietz, 1984, 79–84, 358–399; Hahn, 1998, 200–202) was written by Buddhaguhya.

The Indian teacher Buddhaguhya was well versed in the *kriyātantras*, *caryātantras*, and *yogatantras*. After some years of teaching in Varanasi, he retreated to Mount Kailāsa in order to attain spiritual perfection. When messengers of King Khri srong lde’u btsan arrived inviting him to come to Tibet, he declined, because Mañjuśrī had prophesied that “[g]oing to Tibet will be the death of you” (1.9). Instead, he wrote this epistle, which may be dated between 780 and 790 CE (Dietz, 1984, 81). The *Bhoṭasvāmidāsalekha* consists of four letters that are addressed to the king himself, to his ministers, to the clergy in retreat (*sgom chen*), and to the lower clergy (*spyi’i bande*). A letter with instruction for the common people (*’bangs*) is not included. This epistle is most remarkable for its allusions to the history of the Yarlung dynasty, to which Khri srong lde’u btsan belongs, and for its description of the development of Buddhism in Tibet (Snellgrove, 1987, 446–449). We read about the lineage of the Yarlung rulers and their various efforts to promote Buddhism. In this context (v. 1.1), “the unbroken lineage with Srong btsan sgam po (618?–649), the embodiment of the bodhisattva Avalokiteśvara” is mentioned. From this as well as from the prophecy that Khri srong lde’u btsan’s great-grandsons will destroy the Tibetan kingdom, one might assume that this part of the *Bhoṭasvāmidāsalekha* was updated at a later time. The king is asked to build mo

time. The king is asked to build monasteries, stūpas, and palaces (2.12) and to accept the Vajrayāna as the best of all vehicles (2.17). While the instruction for the ministers consists in the exhortation for correct political and ethical behavior (3.1–14), instructions for the clergy are concerned with the Buddhist doctrine (4.1–6; 5.1–20). The letter is written in verse in an elegant style with many archaic words. The *Bhoṭasvāmidāsalekha* might have been written in Tibetan as well, since no translators are mentioned.

*Sārasaṃgrahalekha

The *Gces pa bsdus pa'i phrin yig btsun pa chen po Dpal dbyangs kyis Bod rje 'bangs la brdzangs pa* (**Mahābhadantaśrīghoṣapreṣitabhoṭasvāmidāsasārasaṃgrahalekha*; Letter that Summarizes the Essence [of the Dharma] and Was Sent by Dpal byangs to the Ruler and Subjects of Tibet; see Dietz, 1984, 85–90, 400–529; Hahn, 1998, 202–204) was written by Dpal dbyangs, who is one of the *sad mi* – the seven Tibetans who were ordained by Śāntarakṣita in the Bsam yas Monastery in 779 CE. Although no historical events are mentioned in the letter, an exact classification of social strata is given (1.20), and details of jurisdiction and monastic administration are described (4.1.13–14; 3.1.5). The then powerful *svastika* doctrine of the Bön religion is mentioned (3.1.5). The *Sārasaṃgrahalekha* might have been written in Tibetan between 779 and 788 CE (Dietz, 1984, 87). The colophon mentions that the instructions by Dpal byangs were combined with those of former teachers, but no translators' names are given.

The *Sārasaṃgrahalkha* shows one new stylistic characteristic that was adopted in most epistles thereafter. To wit, the truth of every instruction given is confirmed by quotations from Buddha's discourses or from other authoritative works (Dietz, 1984, 331–332). The general instruction on the ten righteous actions (Tib. *dge ba bcu*; Skt. *kuśala*), the 16 moral duties (Tib. *mi chos*), the ten kinds of religious conduct (Tib. *chos spyod rnam pa bcu*), and the ten moral perfections (Tib. *pha rol tu phyin pa*; Skt. *pāramitā*) is followed by the instruction for the king, which consists of excerpts from Mātṛceṭa's **Mahārājakaniṣkalekha* (21 verses) and Nāgārjuna's **Suhṛllekha* (11 verses) and *Ratnāvalī* (Necklace of Jewels; 9 verses). The importance of the general instruction for the common people, the ministers, and the saṅgha is confirmed by a long extract from Śāntideva's *Bodhicaryāvatāra* (Entering the Bodhisattva Path; 84 verses). The epistle is concluded with a quotation of Nāgārjuna's *Ratnāvalī* (22 verses).

*Cittaratnaviśodhanakrama

The **Cittaratnaviśodhanakrama* (Gradual Course of Purification of the Mind Jewel; Dietz, 1984, 45–52, 142–213; Hahn, 1998, 204–205) was written by Jitāri. This epistle is an important specimen of epistolary literature because of its fundamental and exemplary treatment of its subject matter – to wit, the purification of the mind from all defilements. The author Jitāri (10th/11th cent.) is known as a teacher of Atiśa and as a Buddhist philosopher teaching at the Buddhist university of Nālandā (see Dietz, 1984, 45nn106–108, 45f.). The addressee seems to have been a king, because the address is *sa bdag, mi skyong, mi dbang, mi rje, mi bdag* (ruler of the earth, protector of men, king, lord, ruler of men). The purpose of the epistle is the purification of the mind jewel that is radiant by nature, an idea related to the *tathāgatagarbha* or *dharmadhātu* doctrine. The teaching on the gradual purification from erroneous notions is corroborated by quotations from relevant canonical and post-canonical works in prose and verses. In chapter 6, some prevalent erroneous views regarding the own being (*svabhāva*) and momentariness (*kṣaṇikatva*) and their purification are treated. In chapter 7, the purification by means of constructing a *maṇḍala* (*maṇḍalavidhi*) is taught. This chapter is transmitted separately in the Tanjur (P 4582/D 3763) under the title *Maṇḍala gyi choga* (Skt. *Maṇḍalavidhi*). In the Tibetan tradition of the literature on *blo sbyong* (the purification of mind), this epistle is considered an authentic and substantial link between the Indian and Tibetan traditions (Roesler, 2011, 23–24). The **Cittaratnaviśodhanakrama* was translated by the Indian Ācārya Dulopa and the Tibetan Lotsāba Chos kyi shes rab (11th cent.; Dietz, 1984, 119–120).

*Vimalaratnalekha

The **Vimalaratnalekha* (Letter Consisting of Flawless Jewels; Dietz, 1984, 65–67, 302–319; Hahn, 1998, 207–208) was written by Dīpaṃkaraśrījñāna, better known under his honorific name Atiśa (982–1054 CE). He wrote his letter to King Nayapāla (Tib. Niryapāla [see Dietz, 1984, 303n1]; 1038–1055 CE) when he was about to leave for Tibet in 1040 CE. He explains his purpose: "Although many wise men have explained (these teachings), I have written them down again in order to end your suffering, o king" (v. 39; trans. by author). Apart from verses 1–3 and 39–40, which are typical for the *lekha* genre, the other verses (4–38) are identical with Atiśa's **Bodhisattvamaṇyāvalī* (Jewel Necklace for the Bodhisattva; Eimer, 1981). In these short didactic verses, no structural principle is discernible. Elementary religious and moral instructions are given in which the verb modes imperative and necessitative prevail. The advice that one should recognize the contrasting teachings of (1) exceptional people, of (2) those who have religious insight, and of (3) those who are beginners (v. 13) is reminiscent of Atiśa's **Bodhipathapradīpa* (Lamp on the Path to Enlightenment) with its classification of three kinds of persons – the lower, middle, and the best (i.e. bodhisattva). The **Vimalaratnalekha* was translated by Atiśa himself together with Lotsāba Tshul khrims rgyal ba (Dietz, 1984, 121–122).

**Gurulekha*

The **Gurulekha* (Letter to the Spiritual Teacher; see Dietz, 1984, 53–60, 214–271: Hahn, 1998, 205–206) was written by the monk *Āraṇyaka (Dgon pa pa; see Chandra, vol. I, 1971, 427) and seems to be a student's exercise. Chapters 1–3, which teach the removal of passion, craving, and carelessness, are quoted from chapters 2–4 of the *Udānavarga* (Solemn Utterances [of the Buddha]). Chapter 4, on the removal of defilements, consists of admonitions to avoid a list of defilements, which are well-known from similar Buddhist lists. This epistle was translated by the Indian Ācārya Vinayacandra and the Tibetan Lotsāba Chos kyi shes rab (11th cent.).

**Putralekha*

The **Putralekha* (Letter to the Son; see Dietz, 1984, 61–65; 272–301; Hahn, 1998, 206–207) was a letter written by Sajjana (11th cent.) to his son Mahājana (Skye bo chen po), who abandoned his parents in order to "wander alone in the darkness at the border of a barbarian country" (v. 0.2). Sajjana "sends his precious letter, which is taken from the island of 'well-spoken words' (*subhāṣita*)" (v. 0.3; trans. by author), in order to caution his son against the dangers of sensual pleasures, possessions, women, and alcohol. He recounts the fate of persons who neglected these warnings from the well-known Buddhist *jātakas* and the *Mahābhārata*, among others. These exempla are not exact quotations but are transformed according to their specific purpose. Thus, chapter 4, on avoiding alcohol, is a rearrangement of Āryaśūra's **Kumbhajātaka* (Legend of the Jar; see Hanisch, 2002). The letter ends with the wish that all beings might attain omniscience by this teaching. It was translated by Mahājana, Sajjana's father, together with the Tibetan Lotsāba Marpa Chos kyi dbang phyug (11th/12th cent.; see Dietz, 1984, 120–121).

**Candrarājalekhaka*

The **Candrarājalekhaka* (Letter to King Candra; see Roerich, 1949–1953, 1031–1033; Dietz, 1984, 68–74, 320–339; Hahn, 1998, 208–209) was written by Mitrayogin (12th/13th cent.). The addressee, King Candra, might be the Gahadavala ruler Jayacandra who was defeated by the Muslims in 1193 CE. The purpose of the letter, which consists of 50 stanzas, is "the instruction on that what is right" (vv. 2, 50). The instruction consists of a warning against earthly possessions, quarrel, passion, and hatred (vv. 3–10) and against transitory happiness (11–25) and of a lecture on saṃsāra (vv. 26–36) and heretical views (vv. 37–45). Although the letter continues the tradition of Nāgārjuna's **Suhṛllekha*, it does not contain any Buddhist *termini technici*. Seemingly, the **Candrarājalekhaka* is a very personal letter of a Buddhist master to his lay disciple. The letter was translated by Mitrayogin himself together with the Tibetan Lotsāba Tshul khrims shes rab.

The tradition of writing epistles of instruction and admonition to spiritual friends and kings is also known in Pali literature, in which such works are called *paṇṇa* (von Hinüber, 2000, §§ 438–553).

Saddhammopāyana

Saddhammopāyana (Gift Offering of the True *Dhamma*; see von Hinüber, 2000, §§ 438–440; Morris, 1887; Hazlewood, 1988) was written by Mahāthera Ānanda (n.d.) and contains a survey of the Buddhist teachings and lay ethics in 621 verses divided into 19 sections. Its structure follows that of the Sanskrit *lekhas*. It was sent to a *piyasabrahmacārī* ("dear fellow monk") named Buddhasoma (v. 3), and the first three verses contain a praise of the Buddha and the addressee's name. The *Saddhammopāyana* deals with the unfavorable births (vv. 4–52), the

dangers of evil deeds (vv. 53–96),
the *preta* world (vv. 97–128), the suff

dangers of evil deeds (vv. 53–96), the suffering in the *preta* world (vv. 97–128), the suffering of animals (vv. 129–175), evil (vv. 176–210), and the advantages of meritorious action (vv. 211–450). Noteworthy are the verses about the cultivation of the mind (*bhāvanā*; vv. 451–496), transference of merit and rejoicing in others people's merit (vv. 497–516), instructive teaching, listening, paying homage, humble service, taking refuge, mindfulness, and heedfulness (vv. 517–615). The final six verses are divided into conclusion and valediction, framing Mahāthera Ānanda's wish that this teaching of the *dhamma* be beneficial to all beings.

Mahānāgakulasandesa

Mahānāgakulasandesa (Snh. *Mānāvuḷusandesaya*; Message [Sent] from [the City] Mahānāgakula; see von Hinüber, 2000, § 441; Barnett, 1905) was written by Mahāthera Nāgasena. This letter is an answer (vv. 56–57) to a lost letter by the Burmese Mahāthera Kassapa sent from Arimaddanapura (i.e. Pagan) in Burma. Only the beginning of this letter, a poem of 62 verses in a very ornate style, is available. After a poetical description of the medieval Sri Lankan town Mahānāgakula (vv. 1–10; present-day name Magampura) and a praise of Nāgasena's virtues (vv. 11–22) follows a description of Arimaddanapura (vv. 23–44) and praise of the addressee, Mahāthera Kassapa (vv. 45–52). The concluding part consists of the valediction of the addressee (vv. 53–57). In the last verses (vv. 58–62), historical events are recounted, including the reforms of the saṅgha by Parakkamabāhu I. On account of this fact, the *Mahānāgakulasandesa* can be dated to the 13th century.

Sandesakathā

Sandesakathā (see von Hinüber, 2000, § 442; Minayeff, 1885) was written by Ñāṇābhivaṃsa. This letter differs with respect to style and content from all other letters, because after three verses of praise of Mahākāruṇika ("The Great Compassionate") at the beginning, the main part of the letter is written in prose. It seems to be a kind of cover letter, and it was written in 1801 "to testify to the ordination of three Sāmaṇeras and a layman from Ceylon" (von Hinüber, 2000, 204). Several accompanying documents and the controversy surrounding the *ekaṃsikagaṇa* ("the group that covers one shoulder"; von Hinüber, 1995, 39) are referred to.

Sīmāvicāraṇa

The *Sīmāvicāraṇa* (Considerations on Ritual Boundaries; see Kieffer-Pülz, 2011) is a letter by King Rāma IV Mongkut (r. 1851–1868 CE) of Siam written to a *thera* (elder) in Ceylon in 1844 discussing problems of the relevant Buddhist law (*vinaya*).

Syāmasandesa

Syāmasandesa (Message from Siam; see von Hinüber, 1996, 204; Filliozat, 1997) was sent by Aggamahāsenāpati ("Supreme Commander") of Siam to the royal court at Kandy (Ceylon) in 1756. This letter is of particular importance to the history of Pali literature, because it enumerates the titles of 97 Pali texts that were lost and brought back as manuscripts to Ceylon from Siam.

Other letters in Pali addressing various topics and written during the 19th century are collected by A.P. Buddhadatta (1962).

Although only few *lekha*s have survived, sending letters to laypeople and spiritual friends seems to have been an important didactic means for Buddhist teachers since the 2nd century that continued until Buddhism disappeared from India in the 12th or 13th century. This literary form was used to convey Buddhist doctrine, ethical advice, and exhortations to kings and the Buddhist clergy. Difficult matters were treated in a pleasant and generally understandable style. The authentic admonitions were supported by authorized quotations from well-known Buddhist *sūtra*s, works of famous Buddhist teachers, *nīti* literature (didactic literature that teaches worldly wisdom and the proper conduct to rulers and princes), and/or *jātaka* literature. Not only was general Buddhist doctrine imparted in this way, but also personal problems were treated and presented as general advice to all people. References to political situations or reforms and to divergent tendencies in the Buddhist religion are particularly valuable for our knowledge of historical events, as exemplified in the **Mahārājakaniṣkalekha*, the Tibetan letters, and the Pali letters.

Whereas Buddhist epistles in the *kāvya* style are not found afterward, letters of Buddhist teachers in prose and on different topics are transmitted in Tibetan as well as in Chinese. At least in Western-language sources, only few of the Tibetan epistles have been published (Thomas, 1927; Karmay, 1980; Schaeffer, 2004) and just one Chinese epistle (Wagner, 1969, 1971). Collections of letters exist in Japan as well, such as those of Shinran (Ueda, 1978), his wife Eshinni (Dobbins, 2004), and Nichiren (Yampolsky, 1996). These various types of Buddhist letters require further study.

Biography and Hagiography: Tibet

Tibet has a rich tradition of life writing, both biographical and autobiographical, which takes many different forms, ranging from extensive narrative texts about the founding figures of the Buddhist religion, to diaries, travelogues, songs, devotional prayers, and invocations. A great number of full-fledged life narratives are devoted to Tibetan religious masters, describing the circumstances of their birth and early life, their religious training and practice, and their subsequent career as teachers. These life stories may be imaginative and vivid literary portraits, very detailed biographical accounts, or sketchy and stereotyped compositions. This text type is usually labeled *rnam thar*. The term is an abbreviation of *rnam par thar pa* (Skt. *vimokṣa*), which may be literally translated as complete liberation (story) – where "story" is sometimes made explicit by the compound *rnam thar lo rgyus*. This designation makes readily known the central issue of the narrative, namely the achievement of awakening by the biographical subject. For this reason, the term *rnam thar* is often translated as hagiography (lit. writing about sanctity), and Tibetan works of this type may be compared to medieval lives of Christian saints when emphasizing their preponderant devotional and cultic elements. However, the Tibetan label *rnam thar* subsumes about a thousand known texts produced from the 12th to the 20th century, which vary greatly in style and content reflecting the changing preoccupations and formal predilections of Tibetan compilers (for a preliminary quantitative analysis, see Schaeffer, 2010). Individually, these works might ultimately be ascribed to different Western literary genres, and it has been proposed, for example, to generally understand *rnam thar* as a "Tibetan form of novel writing" (Roesler, 2014, 118). At the same time, not all life stories are titled *rnam thar*: another widespread title for many biographical and autobiographical works is *rtogs brjod* (or *rtogs par brjod pa*; lit. realized speech, talking about realization). This expression is employed also to translate Sanskrit *avadāna*, "feats" (comparable to Latin *Acta*) or "apologues," mainly designating stories of past lives illustrating the working of karma. While *rtogs brjod* may indeed refer to didactic stories, in Tibetan it is in practice interchangeable with *rnam thar*, and thus, as the latter, may be also translated as hagiography, biography, autobiography, or life story.

Hagiography and History

The earliest extensive surveys and discussions of Tibetan *rnam thar* occur in scholarship devoted to Tibetan historical literature, in which these works are evaluated in terms of their reliability as historical sources. A.I. Vostrikov (1970, 180–198) includes a treatment of the genre, in which the author distinguishes a few "life-histories of saints, which are full of legends and are interesting not from the historical but only or almost only from the folkloristic and literary standpoint," from the vast majority of "real biographies," which are "basically important and fully authentic historical monuments." Similarly, G. Tucci (1949, 151) remarked "an historian cannot ignore the *rnam thar*. He must resign himself to read them, and go through hundreds of pages to find a point of reference, an allusion, an important piece of information." In other words, these sources are indispensable for the study of the political history of Tibet, containing occasional reference to events otherwise unknown, although their proper focus is on the spiritual development of the religious personalities, without any relevant historical value.

This distinction based on topic, that is, religious concerns versus political history, is at the origin of the differentiation between hagiographical and historical sources asserted by the late 19th century with the establishment of history as a modern discipline. At that time, hagiography was coined as a meta-label subsuming works titled *Acta*, *Vita*, *Miracula*, and so forth, all devoted to retelling the lives of the saints, and distinguished from works concerned primarily with political events. A common and shared definition of hagiographic document (*document hagiographique*) was coined, which was a functional one: writings, which aim at edification, are inspired by the cult of the saints, and are meant to promote it (Delehaye, 1906, 2). In fact, these are not only the saint's life-stories, but also calendars, martyrologies, inscriptions, liturgical

books, litanies, hymns, iconographical representations, and so on; all sources "arising chiefly from the same exigency: engender, propagate, strengthen the cult of the saints." (de Gaiffier, 1970, 140). Hence, hagiography may be hardly understood as a literary genre, but rather as a "thematic discourse employing a plurality of media" (Gemeinhardt, 2014, 25; van Uytfanghe, 1993). Some have also spoken against a functional definition of hagiography, arguing that many writings about the saints were "unrelated to any kind of liturgical veneration," and served rather a wide array of purposes, some of which had little to do with cults:

> they provided communities and institutions with written traditions; they defended the independence of communities and institutions against those who wished to subject them; they defended property rights and territorial endowments, they fueled episcopal rivalries; they conveyed political and theological stances; they propagated an individual author's or group's notion of "the holy." (Lifshitz, 1994, 97, 97n7)

Therefore, medieval saints' biographies were, on the one hand, inscribed in a wide cultic complex centered on the veneration of the saints, together with documents of different nature (narrative, liturgical, inscribed, and visual), but, on the other hand, they served manifold aims, being the main historical writings of the religious communities. They were indeed reconstructions of the past, or records of contemporary events, serving collective memory: a memory not focused on secular contents, or implying a conception of truth as empirically verifiable, but nevertheless the product of a social corpus identifying itself in a shared narrative. Therefore, they constitute fundamental sources for the study of cultural history, and scholarly attention has thus shifted from the factual data they record to the values and world view conveyed by the individual works, and has progressively focused on the religious and sociopolitical contexts from which they stem.

Tibetan life stories, for their part, also belong to a wider array of text typologies arising from and engendering the cult of the saints, and simultaneously partaking in the historical discourse and fulfilling a multiplicity of functions. "Golden rosaries" (*gser 'phreng*) are collections of biographies of the successive masters of a lineage from the founder to the present, and testify to the combination of devotional stances and historical preoccupations. Similar compendia dedicated to "the rebirths of an individual" (*sku 'phreng* or *'khrungs rabs*) or to "the succession to an abbatial seat" (*gdan rabs*) also exist. Works belonging to the historical genre called "the origin of the *dharma*" (*chos 'byung*) are mostly made of sequences of life stories of eminent masters, crafted from the source material provided by *rnam thar*s and *gser 'phreng*s. In these sources, history is conceived as the story of the predication of the Buddhist teachings and of the salvific activity of buddhas and bodhisattvas in order to liberate sentient beings. Their initial sections show their "teleological" horizon, with the account of the life of the Buddha and the introduction of the teachings in Tibet, while the core of the works is taken up by series of life stories of masters of multiple teaching lineages, lifted and adapted from the available *gser 'phreng* or rewritten for the purpose. The *Blue Annals* (TBRC W1KG5762; TBRC W7494; Roerich, 1949; Schaeffer, 2000; van der Kuijp, 2006) and the *Lho rong chos 'byung* (TBRC W27302; van der Kuijp, 2001) are cases in point.

Devotional genres closely related to *rnam thar* are prayers (*gsol 'debs*), eulogies (*bstod pa*), and invocations (*smon lam*) devoted to the Buddhist masters. In particular, "biographical prayers" (*rnam thar gsol 'debs*) and "biographical eulogies" (*rnam thar bstod pa*) are versified compositions praising the teacher (usually repeating formulas such as "I bow down to…"), structured in order to recollect at each stanza his qualities and the main events of his life (Sernesi, 2014). For example, it has been shown how the earliest account of the life of Atiśa was the *Bstod pa brgyad cu pa* (Praise in Eighty Stanzas), originally written on the back of a painted scroll (Eimer, 2003), and a biographical prayer to Mi la ras pa (also known as Milarepa) is likewise inscribed on the back side of a painting (Quintman, 2013). A widespread format of life writing is the prose commentary to a versified eulogy. The praise structures the narrative, and each section is opened by a stanza, which is explained and expanded upon in the biographical account. In some cases the verses were written at first to constitute an autonomous text, and were taken as the basis for the biography only at a later stage (Jackson, 1990); in other cases the works were likely written directly as a mixture of verses and prose. A complete Bka' brgyud *gser 'phreng* thus structured was compiled in the mid-13th century by one Rgyal ldang (/thang) pa Bde chen rdo rje (TBRC W23436; extracts from this collection are translated in Torricelli, 1998; Tiso, 2010, 161–240, 255–282).

Performances of Tibetan ritual dances (*'cham*), regularly held on the occasion of religious celebrations, may tell stories from widely known hagiographies or epics, and likewise wandering bards recount these popular episodes, sometime with the help of portable painted scrolls (Stein, 1959). Indeed, visual narratives, either scrolls (*thang ka*) or frescoes filling the walls of monasteries, temples, and monumental reliquaries (*mchod rten*; Skt. stūpa) depict the life of the Buddha or the saints, and may be accompanied by cartouches or, as mentioned, combined with prayers and eulogies. It may be argued that these various mediums of commemorating the saints constitute a corpus of nonliterary hagiography (Gemeinhardt, 2014, 21–29).

The intimate relationship between hagiography, sacred space, and pilgrimage is well established, and Tibet is no exception. Guidebooks (*gnas yig* or *dkar chag*; "register") to sacred mountains, temples, hermitages, or "hidden valleys" (*sbas yul*) quote from the life stories of the culture heroes who are credited with "opening" the places to the Buddhist practice, subduing hostile and heretic forces, empowering the land with their religious charisma, and leaving lasting signs of their presence in the very landscape, such as footprints or handprints recorded in rock. Such texts also would recall, with varying degree of detail, extended retreats carried out by renowned masters, the foundation of religious institutions and the offering of cultic objects, and episodes related to the miraculous properties of the sites. In fact, pilgrimage guidebooks may also be titled *rnam thar*, as in the case of the early 16th-century texts describing the foundation of the Ārya Wa ti bzang po Temple and the mythical story of its main effigy, the lord (*jo bo*) of Skyid grong (*Rnam thar nyi ma'i dkyil 'khor* and *Rnam thar nam mkha'i nor bu ma rig mun sel*; Ehrhard, 2004). Incidentally, it may be noted that folk songs (*glu*) or praises (*bstod*) are versified genres that may dwell on the qualities and significance (both religious and social) of the landscape, while also relating mythic and narrative contents (e.g. Macdonald, 1997; Buffetrille, 2000; Ramble, 2002). In this way, there is a circular and rich exchange between local narrative traditions, pilgrimage practices, writings about sacred geography, and hagiographical compositions, which results in popular stories transmitted in multiple forms and in different text types.

Composition and Structure

Tibetan life stories may be composed by the subject himself, sometimes dictating to a scribe who may edit the narrative, they may be compiled by a master's direct disciples on the basis of autobiographical documents and of their own remembrances and notes, or they may be crafted centuries later by a process of creative selection and editing of existing accounts. Often the prologues and the colophons of the works inform us about the compilers' identities, the context of production of the works, the available sources and their uses. A distinction may be made between external (*phyi*), internal (*nang*), and secret (*gsang*) life stories, depending on the focus of the narrative, respectively on a chronological account of the life, on the spiritual transmissions and achievements of the saint, or on the description of prophetic dreams and visions. It has been argued that, during the 17th and 18th centuries, biographers also engaged in critical evaluations of the style and function of their works, giving prescriptive instructions, arguing why certain formal choices best serve the purpose of creating an inspiring narrative, and warding off criticism (Schaeffer, 2010).

Biographical works are meant primarily to provide a model of conduct and show the effectiveness of the teachings in bringing about awakening. "Complete liberation" (*rnam thar*) is inexpressible in words, it may not be grasped by non-awakened beings, and it may be represented only by means of examples: this idea is often conveyed in the opening lines of Tibetan biographies or eulogies by comparing the recounted story to a drop in the ocean of the realizations and qualities of the master. The historical individual is usually conceived as an emanation of a buddha or bodhisattva, and hence his deeds for the benefit of beings transcend the single lifetime: stories of previous incarnations and prophecies often open the hagiographical works. Hence, the narratives are not intended to document a life, whose full purport is ultimately elusive, but to construct a paragon of virtue to emulate. However, sanctity itself is a shifting notion, as it is socially determined, depending on the shared values and institutional interests of given groups, which may change over time. For this reason, hagiographies construct distinct kind of religious personae, and may be retold and rewritten. Although a typological analysis of this sort is still lacking, the life story of an abbot (*mkhan po*), a *yogin* (*rnal 'byor*), a treasure revealer (*gter ston*), a holy madman (*smyon pa*), or a reincarnated lama (*sprul sku*) would differ in plot, focus, and core values transmitted.

Buddha Śākyamuni may be seen as the normative and inspiring model for the saintly life, and in Tibet his story is often referred to as the "twelve deeds" (*mdzad pa bcu gnyis*). As a result, the twelve-fold

yis). As a result, the twelve-fold

structure was adopted by a number of works: although in the specific contents of the narrative there may be no direct correspondence between the master's deeds and the life of the Buddha, as an overall formal structure the numbered chapters titled as "deeds" (*mdzad pa*) evoke the life of the founder, and suggest that it is mirrored and reenacted by the biographical subject. Among the life stories following this pattern is *Rnal 'byor gyi dbang phyug chen po rje btsun mi la ras pa'i rnam par thar pa thar pa dang thams cad mkhyen pa'i lam ston* (The Complete Liberation [Story] of the Venerable Mi la ras pa, Great Lord of the Yogins, Showing the Path to Liberation and Omniscience) by Gtsang smyon Heruka (1452–1507; de Jong, 1959; Quintman, 2010; Sernesi, 2014), and the biography of the First Dalai Lama Dge 'dun grub pa dpal bzang po (1391–1474), titled *Bla ma thams cad mkhyen pa'i rnam thar ngo mtshar mdzad pa bcu gnyis pa* (The Complete Liberation [Story] of the Omniscient Master: The Twelve Marvelous Deeds; TBRC W2CZ7861; Shen, 2002, 23–33, 293–336). Moreover, the trope of the deeds may be more widely encountered in biographical literature, as in the case of the regional chronicle *Shel dkar chos 'byung* (TBRC W1KG13996; Wangdu & Diemberger, 1996), which recounts extensively the "thirteen auspicious deeds of the Situ" (*si tu'i legs mdzad bcu gsum*), corresponding to the same number of remarkable feats of the righteous ruler Si tu Chos kyi rin chen (d. 1402), which led to the foundation of the fortress and monastery of Shel dkar in La stod Lho. In other sources the distinct sections of the life story are instead labeled "greatnesses" (*che ba*), as for example in the two main biographies of Atiśa, the *Rnam thar rgyas pa* (divided into two greatnesses), and the *Rnam thar yongs grags* (divided into three; Eimer, 1977, 158–191; 1979; Roesler, 2014, 121–3). Another common way of naming the numbered chapters recounting the individual episodes of the life story is "quality" (*yon tan*). A conspicuous group of biographies of masters of the Bka' brgyud tradition are divided into two parts, called "the quality of enduring hardships, connected with the family/spiritual disposition" (*rigs dang 'brel ba dka' ba spyad pa'i yon tan*) and "the quality of experience, connected with meditative absorption" (*ting nge 'dzin gi dang 'brel ba nyams su myong ba'i yon tan*), with the second often divided into a variable number of subsections, all also called "qualities". This group includes the earliest extensive life story and songs of the master Mi la ras pa – called *Bzhad pa rdo rje'i rnam thar* (The Life of Bzhad pa rdo rje) or *Bu chen bcu gnyis* (The Twelve Great Disciples) – hagiographies of his master Mar pa and his disciples Ras chung pa and Ngan(/Ngam) rdzong pa, and a complete "golden rosary" (the *Bde mchog snyan brgyud* biographies; TBRC W21145). In this case it was possible to link the origin of the formal structure to a specific teaching lineage (i.e. the aural transmission of Saṃvara) and to the function of life writing within the religious path (Sernesi, 2010; 2011), so it may be worthwhile in the future to further investigate the relationship between form, purpose, and the context of production of biographies.

Biographies

The life stories of Indian teachers and accomplished ones (*siddhas*), and culture heroes, such as Padmasambhava, Atiśa, and Mi la ras pa, may be imaginative and powerful literary products, centered on their realizations, abilities, and religious values, with a strong didactic and devotional function. These works allow for dramatic plot structures, such as the atonement for great evil deeds performed in youth, hardships and trails, confrontations with non-Buddhist masters by means of dialectic or spells, performance of miracles, and visionary and prophetic encounters, including symbolic journeys to pure lands and direct encounters with buddhas, bodhisattvas, and *ḍākinīs* who bestow secret initiations, teachings, and texts to the chosen masters (e.g. Dalton, 2004; Guenther, 1963; Kunsang, 1993; Quintman, 2010; Ramble, 2010; Robinson, 1979; 1996; Templeman, 1989; Torricelli & Naga, 1995).

In contrast, life stories of prominent religious personalities of later date tend to be more stereotyped and often may consist solely of a record of masters met, teachings received, positions held, endeavors sponsored (such as the erection or renovation of buildings and statues), and pupils taught. Some of these biographies, however, are very extensive, and recount in great detail and chronological order the events of the lives of their protagonists, such as travels, teaching sessions, offerings received, projects realized, and people encountered. Examples of such detailed and informative biographies include those dedicated to the 15th-century masters Shākya mchog ldan (1428–1507; Caumanns, 2010; 2015), Gtsang smyon Heruka (1452–1507; Smith, 1969; Larsson, 2012), Khrims khang Lo tsā ba Bsod nams rgya mtsho (1424–1482; Ehrhard, 2002), Ngor chen Kun dga' bzang po (1382–1456; Heimbel, 2011; 2014), Tsong kha pa Blo bzang grags pa (1357–1419; Kaschewsky, 1971), and Dge 'dun grub pa Dpal bzang po (1391–1474; Shen, 2002). It has been suggested that the length and amount of detail of biographical works steadily increased over time, with a peak from the late 17th to the late 18th centuries (Schaeffer, 2010, 269). These sources are employed for historical studies, for reconstructing the development of religious communities, for dating institutions and monuments, and for political history as well: indeed, these works may record the foundation of monastic institutions, the endowment of estates, the outcome of battles and diplomatic negotiations, the succession to high administrative and military offices, and also embed letters, edicts, testaments, registers, and similar documents.

Life stories of men who were chiefly secular leaders with no major clerical office are scarce, and exist primarily embedded in clan histories (*gdung rabs*), royal chronicles (*rgyal rabs*), and other historical works. These sources hardly provide full-fledged biographies of noble people, but tend to record birth and death dates, marriage alliances and offspring, positions held and titles received, means of recognition and legitimation of reincarnated masters, and major religious connections and patronage activities. For example, the *New Red Annals* (TBRC W21657; Tucci, 1971) by Paṇ chen Bsod nams grags pa (1478–1554) may rapidly sketch the character and main feats of powerful individuals in just a couple of lines, when overviewing the history of the various administrative-cum-military units of Tibet (Tucci, 1971, 189–245). The best-known example of a self-standing biography of a secular leader is the life story of the 18th century Tibetan ruler Pho lha nas Bsod nams stobs rgyas (1689–1747), who is chiefly praised for his military valor and success (*Mi dbang rtogs brjod*, composed in 1733 by Mdo mkhar Tshe ring dbang rgyal [1697–1763]; TBRC W7734; Petech, 1950, 3–4). Very little biographical writings survive that shed light on the lives of commoners, and that may be used for social, economic, and cultural history. However, many life stories of otherwise unknown and unimportant village priests exist, and while they are mostly sketchy and standardized accounts, some do give insight in the life of peasants in premodern Tibet.

Among the available sources, life stories of women are very rare, although not unseen. The female folk hero Snang sa ’od ’bum is one of the “revenants” (*’das log*), that is to say individuals who purportedly returned from death in order to preach the need for a virtuous life and tell of the terrible ordeals and punishments otherwise awaiting in the hells. Various versions of her story are recounted in narrative collections devoted to this theme, as well as in traditional dramas (Allione, 1984; Epstein, 1982; Pommaret, 1989). One of the most prominent female saintly figures of Tibet is Ma gcig Lab sgron, who lived between the 11th and 12th century and is described as the consort of the *siddha* Pha dam pa sangs rgyas. She is renowned for propagating a specific tradition of teachings called Gcod, and, indeed, the best-known account of her liberation story opens a composite practice compendium titled *Phung po gzan skyur rnam bshad gcod kyi don gsal byed* (Clarifying the Meaning of Gcod: A Complete Explanation of Casting Out the [Bodily] Aggregates as Food [Offerings]; TBRC W1KG17585; translated in full in Harding, 2003; the two initial chapters, narrating Ma gcig’s life, are also translated in Allione, 1984; Edou, 1996). Her namesake and contemporary Ma gcig Zha ma (1062–1149) initiated one of the 18 lineages of the “path and fruit” (*lam ’bras*) teachings, and hence her life story is recorded for the first time in *Zhib mo rdo rje* (The Incisive *Vajra*), the early 13th-century narrative of the lives of the masters of the tradition compiled by Dmar ston Chos kyi rgyal po (c. 1198–1259; Stearns, 2001, 125–131). In fact, female masters and adepts who lived during the early centuries of the latter translation period (*phyi dar*; 11th–14th cents.) are often included in the lineage transmission histories and the *gser ’phreng* of yogic traditions and practice lineages such as the path and fruit (besides Ma gcig, the *Zhib mo rdo rje* also tells of “the four female disciples of ’Brog mi lo tsā ba who reached attainment”; Stearns, 2001, 105–109), or the aural transmission of Saṃvara (Ma gcig Ong jo and Kun ldan ras ma; Sernesi 2011), but become rare afterwards within the more institutionalized Buddhist schools (Martin, 2005; Allione, 1984). Few full-fledged and independent biographies of eminent female masters exist, but they include the life story of the first Rdo rje phag mo Chos kyi sgron ma (1422–1455), whose line of reincarnations comes down to the present day (*Ye shes mkha’ ’gro bsod nams ’dren gyi sku skye gsum pa rje btsun ma chos kyi sgron ma’i rnam thar*; TBRC W2CZ7892; Diemberger, 2007), and the life story of Kun tu bzang mo, the consort of Gtsang smyon Heruka (*Dus gsum rgyal ba ma lus pa bskyed pa’i yum chen kun tu bzang mo’i rnam par thar pa zab don gter mdzod mthong ba don ldan*). The earliest known example of a female autobiographical voice in the literature of Tibetan Buddhism belongs to the nun O rgyan Chos skyid (1675–1729), who stemmed from the Himalayan region of Dol po and whose story remained well known in her home region down to the 20th century

It may be compared with more recent examples of the genre, such as the autobiography of Rje btsun Lo chen Chos nyid bzang mo (1865–1951), a famous female master of the Ris med tradition (*Gangs shug ma ni lo chen rig 'dzin chos nyid bzang mo'i rnam par thar pa rnam mkhyen bde ster*; TBRC W2831; Havnevik, 1997; 1998).

Autobiographies

Autobiographical writing in Tibet may take different forms, from diaries and travel accounts, to stories woven into instructional literature, to versified compositions or "religious songs" (*mgur*). Full-fledged autobiographies are commonly known as *rang rnam*, *rang gi rnam thar*, or *nyid kyi rnam thar* – "the liberation story of oneself" – although many works of the kind are just titled *rnam thar* or *rtogs brjod*. The boundaries between biography and autobiography are often blurred because of Tibetan writing practices: biographies may be based on autobiographical sources and include passages and documents – such as letters, travelogues, and songs – that originated with the subject. Sometimes the compilers of such works also explicitly claim to have checked the overall account, the chronology, or some specific episode and details of the story directly with the teacher who is the biographical subject himself. Moreover, an account may be dictated to a scribe or edited by a pupil, but still be narrated in first person and achieve the unity of author name, narrator, and principal character that ultimately characterizes autobiography. At the outset of these works, the narrator often feels the need to justify his enterprise, balancing between the equally powerful social expectations of practicing the virtue of humility and being a role model for disciples and fellow practitioners (Gyatso, 1992; 1998, 101–123; Roesler, 2014, 132–136). Hence, the prologues tend to downplay the master's own qualities, attainments, and literary skills, and to explain that he is induced to write out of selflessness and merely to comply with an external request (see Karmay 2014, 17–21 for a full translation of one such prologue from the autobiography of the Fifth Dalai Lama, and Schaeffer, 2010, 273–6 for a discussion of the passage). Known Tibetan autobiographies surpass the number of 150 (Gyatso, 1998, 101), testifying to the popularity of the genre. It has been observed that a third of these were composed by masters belonging to the Rnying ma tradition (50), a third by Dge lugs masters (46), and slightly less by Bka' brgyud pas (36), while only a few survive that are ascribed to Sa skya (11), Bka' gdams (7), or Jo nang (2) masters, or that have been penned by secular leaders (9; Schaeffer, 2010, 296, fig.3, based on TBRC data).

Works by masters who played major roles in shaping Tibetan religious and political history offer their own take on key events, and are employed by scholars as precious sources not only to reconstruct the chronology and factual details of the relevant affairs, but also to engage with the subjective narratives themselves, and understand their rhetoric, function, and general framework of discourse. Noticeable examples of this kind of works are the autobiography (*Nyid kyi rnam thar shes rab grub pa ma*) and the self-eulogy (*Nyid la nyid kyis bstod pa dgos 'dod re skong ma*) by Bla ma Zhang (1123–1193; TBRC W26673, vol. I, 316–366, 108–111; Yamamoto, 2012), *Rtogs pa brjod pa'i tshigs su bcad pa utpala'i phreng ba* (The Garland of *Utpala* Lotuses; TBRC W1KG4869; Ehrhard, 2002, 11–26) by the fourth Zhwa dmar pa Chos kyi grags pa ye shes (1453–1524), and the detailed and large-scale autobiography of the fifth Dalai Lama Ngag dbang blo bzang rgya mtsho (1617–1682) called *Za hor gyi ban dhe ngag dbang blo bzang rgya mtsho'i 'di snang 'khrul ba'i rol rtsed rtogs brjod kyi tshul du bkod pa dukula'i gos bzang* (The Illusive Play; TBRC W294, vol. V; TBRC W2CZ5990, vol. V; Karmay, 2014).

To a somewhat different typology belong the masters' "secret biographies" (*gsang ba'i rnam thar*), and the autobiographical writings of the "treasure discoverers" (*gter ston*), as are commonly called individuals who have visionary abilities that enable them to retrieve texts and objects purportedly hidden in the past to be revealed at the appropriate time. Indeed, these works usually focus on inner religious experiences such as vivid dreams and otherworldly encounters, their meaning and symbolism, and their prophetic value. These visions mark the individual's progression on the religious path and eventually lead him to the treasure discoveries and the revelations, framing them within a network of meaningful events that lend them value, authenticity, and legitimacy: significant examples are *Klong chen snying thig le'i rtogs pa brjod pa ḍākki's gsang gtam chen mo* (The *Ḍākki's* Grand Secret Talk) and *Gsang ba chen po nyams snang gi rtogs brjod chu zla'i gar mkhan* (The Dancing Moon in the Water) by 'Jigs med gling pa (1730–1798; TBRC W27300, vol. VII, 21–29, 31–64; Gyatso, 1998).

Travelogues are among the most informative and suggestive kind of autobiographical writing.

Masters travelled widely to complete their training, for pilgrimage purposes, and to carry out diplomatic and economic missions. Their diaries and the notes taken on the road could be reworked into "itineraries" (*gnas yig*) that describe their journeys and convey their reflections and observations. Sometimes composed in a mixture of prose and verse, they may have high poetical value, and be titled "song of the road" or "travel song" (*lam glu*). This is the case of the *Rang gi rtogs brjod lam glu dpyid kyi rgyal mo'i dga' ston* (Celebration of the Cuckoo: An Autobiographical Song of the Road; text and translation in Stearns, 2012), which describes a trip in Central Tibet by the Sa skya master Tshar chen Blo gsal rgya mtsho (1502–1566); also the latter's teacher and friend Kun dga' grol mchog (1507–1566) had composed a journal of a trip in the same area occurred in 1533, the *Lam yig dpyod ldan snying gi mun sel* (Travel Journal to Dispel Darkness from the Heart of a Discerning Person; unpubl. ms. in the Cultural Palace of Nationalities in Beijing; mentioned in Stearns, 2012, 19n12). One of the best known examples of the genre is the *Bal yul du bgrod pa'i lam yig nor bu spel ma'i 'phreng ba* (Rosary of Well-arranged Jewels: Itinerary of a Journey to Nepal; Ehrhard, 1997), recounting a trip to southwestern Tibet and Nepal by the sixth Zhwa dmar pa Chos kyi dbang phyug (1584–1630), while his disciple the tenth Karma pa Chos dbyings rdo rje (1604–1674) penned a journal of his travel to Khams and Amdo during the years 1649–1651 (*Byang chub sems dpa'i rtogs pa brjod pa nges par byung ba'i chos kyi rnam grangs ka la ping ka'i lam glu*) that is also included in his wider autobiography called *The Wish Fulfilling Cow* (TBRC W23999, 1–71, 73–295; Mengele, 2012, 208–231).

Finally, among the autobiographical literature we may include religious songs (*mgur*), which are versified compositions conceived to be sung following a specific melody and have a didactic function ("songs of instruction", *gdams pa'i mgur*), or express religious experiences ("songs of experience", *nyams pa'i mgur*, or "songs of realization", *rtogs pa'i mgur*). Inscribed within a traditionally given poetic imaginary and drawing from a standard pool of rhetorical figures, these compositions may still convey very intimate thoughts and feelings, while describing natural landscapes and human relationships (e.g. the verse: "whenever the green leaves on various trees flourished, I recalled a solitary grove and felt delight"; Sujata, 2005, 337). Songs may also relate details of an individual's training, travels, and encounters, or summarize in meter complex incidents, prophetic dreams or visions. Besides being quoted in prose life stories, songs may be collected in separate volumes of "collected songs" (*mgur 'bum*) or "collected sayings" (*bka' 'bum*) of specific individuals, which may also include letters and different types of religious instructions, and are usually paired with the masters' biographies. Among the most exquisite examples of *mgur* available in English translation are the songs attributed to Mi la ras pa (Chang, 1962), the *Collected Songs* of Ko brag pa bSod nams rgyal mtshan (1170–1249; Stearns, 2000), the so-called "love songs" of the sixth Dalai Lama Tshangs dbyangs rgya mtsho (1683–1706; Sørensen, 1990), the anthology called *The Rain of Wisdom* (1999), and the compositions by Skal ldan rgya mtsho (1607–1677; Sujata, 2005).

Functions

By virtue of the great variety in style and contents, life narratives are widely employed by scholars for the study of Tibetan literature, religion, and political history. The methodological approach and focus of attention has shifted over time: single works have been translated in full, studied to reconstruct individual's life trajectories, read as historical sources, or appreciated and analyzed from a literary viewpoint. Attention has been paid to the development of life narratives over time, comparing multiple accounts devoted to the same biographical subject in order to detect insertions and omissions, and to understand the use of sources and the processes of textual production (e.g. Eimer, 1977; 2008; Tiso, 1996, 1997; Roberts, 2007; Quintman, 2014). Comparative volumes have also considered Tibetan *rnam thar* alongside other Buddhist biographies or life narratives from different religious traditions (Penny, 2003; Covill *et al.*, 2010; Deeg *et al.*, 2010; Conermann & Rheingans, 2014). The multiplicity of approaches matches the inherent diversity of the sources, both diachronically and synchronically across traditions and contexts of production.

Indeed, as we have seen, Tibetan life stories are intimately linked with a wide array of text types, ranging from annals, to prayers, to travelogues, and so forth, and serve multiple functions. Besides the documentary and purely narrative functions that connect biographies to historical writings and novels respectively, the inspirational value of the works is often emphasized in the sources themselves. The titles of the compositions refer to the qualities, virtues, feats, and marvels of the masters, and to the awe and devotion that they generate: hence the common

trope of the "body hair that tremble in faith". Generating faith in the masters of the lineage is considered the first step for the devotee to proceed in the religious path, and hence life stories, together with other devotional texts such as prayers and invocations, play a fundamental role in Buddhist training. They open collections of instructional literature and their reading transmission (*lung*) is bestowed as a preliminary step to engage in the practice. They instruct the pupil on the core values and teachings of the tradition, and shape his expectations in promoting an ideal of buddhahood by concrete examples of awakened beings. The aspirational prayers and invocations that conclude the works show how the narratives establish a direct link with the past master, who is made present by the remembrance, the cultic performance, and the material receptacles of his power. Indeed, texts are one of the three "receptacles" or "vessels" (*rten*) of the inexhaustible presence, or "blessing" (*byin brlabs*), of the Buddha, standing for the Buddha's speech, alongside images (receptacles of the body), and reliquaries (receptacles of the mind). Life stories, in particular, could be produced and printed at the death of a master in the context of funerary rituals, and, similarly to bodily relics, are often said to "liberate whoever sees, hears, remembers, or touches" them (e.g. Schaeffer, 2007).

Life narratives are meant to provide a model of saintly life, one that is transmitted and replicated through the generations. Their formulaic and repetitive character has often been seen as a mere lack of literary skill, but it may also point to shared experiences and similar life trajectories, encoded, remembered, and recounted according to common values and expectations. Lives are recorded to provide the religious community with a collective memory, which in turn shapes the identity of the group, and is transmitted and rewritten over time serving the changing needs of the collectivity. This is a dynamic process that involves commemorative texts, monuments, and cultic ceremonies strictly linked with the narratives themselves. In constructing the shared heritage, identities are reaffirmed also in contrast with other groups, in polemical and political discourses rooted within the main narrative. At the same time, the legitimacy of the teachings of the tradition is affirmed by the account of their origins and their transmission through a chain of worthy masters over the generations. The *gser 'phreng* portray an uninterrupted chain of realized teachers who spread the teachings in order to benefit others, and who, by virtue of these same teachings, achieved "complete liberation". The effectiveness of specific traditions is thus in practice demonstrated by means of testimony. As may be seen, the complexity of simultaneous discourses all at once engaged in Tibetan life narratives is remarkable, and accounts for the ongoing and unwavering scholarly interest in these sources.

Biography and Hagiography: Japan

Descriptions of the idealized lives of charismatic representatives of a given religious tradition fulfill an important function for religions with a pronounced personality cult and a strong sense of the historical. Japanese Buddhism is no exception. Inasmuch as biographies of eminent monks and (rarely) nuns, pious laypeople, or miracle-working ascetics have a decidedly religious, edifying, apologetic, and propagandistic function, they can be classified as "hagiography." Hagiography shall here be defined as the edifying and religiously moralizing description of the idealized life of a person who represents the highest ideals of a given religious group in a given historical context on the grounds of his or her outstanding virtues as well as his or her ability to produce miracles and/or his or her closeness to salvation, and who thus simultaneously functions as an object of veneration and a model to be followed.

Although the hagiographic discourse can be conveyed in various media, certain literary forms seem to be more suitable and are thus more frequently chosen. Generally speaking, (biographical) narratives – that is, stories following a chronological sequence of events that challenge the protagonist and call for responsive action – are preferred. The choice of proper media of the hagiographic discourse also depends on the literary forms already available in a given cultural context. Buddhists in East Asia could resort to highly developed secular prototypes of biographic literature, such as official dynastic histories in China. Traditional Buddhist genres, such as *jātakas* and *avadānas*, have exerted some influence on edifying narratives that may or may not communicate a hagiographic message (Dykstra, 1979; 1980). Over the long history of Japanese Buddhism, the hagiographic discourse expressed itself in various literary genres, due to the heterogeneity of the authors, variations in the specific functions of the texts, and their particular "*Sitz im Leben*" (sociological setting). The same holds true for the choice of protagonists and conveyed religious contents, which strongly depend on the sectarian leanings of authors and audience.

General Characteristics of Hagiography and Religious Biographies in Japan

The premodern Japanese adopted and acculturated almost all essential cultural elements from China, albeit in a selective and creative way, including traditional Chinese forms of literary expression and Buddhism. Remarkably, however, the Japanese only reluctantly adopted the prestigious and representative Chinese Buddhist genre of "biographies of eminent monks" (Chn. *gaoseng zhuan* [高僧傳]; Jpn. *kōsō den*), which can be regarded as a religious adaptation of the so-called *liezhuan* (列傳; serial biographies) of commoners in the official histories in the tradition of Sima Qian's (司馬遷; c. 145–187 BCE) *Shiji* (史記; Kleine, 2010). The main reason for the Japanese Buddhists' neglect of this traditional genre may be sought in differences regarding the respective social situations of the Chinese and the Japanese saṅghas. Whereas Chinese Buddhists were always coerced to prove that Buddhism was a valuable and beneficial element of Chinese civilization, the Japanese saṅgha was on the one hand hardly ever threatened by anti-Buddhist intellectual elites and on the other hand internally strongly differentiated. For these reasons, there was no need and no interest in producing transsectarian collections of monks' biographies. Therefore, the Japanese preferred other literary genres to convey their hagiographic message.

Another distinctive feature of Japanese hagiography is its social permeability. In contrast to the Chinese *gaoseng zhuan*, which dealt exclusively with "biographies of eminent monks," Japanese *kōsō den* often included biographies of laypeople, rulers, and even gods. This may be seen as an indication of the "embeddedness" of Buddhism in Japanese culture. In cases in which biographical collections deal exclusively with monks, these are, as a rule, reserved to monks of one particular school or tradition. Such sectarian collections generally focus on those qualities of the protagonists that are constitutive for the self-concept of the specific tradition and on the protagonists' significance for the establishment and development of this tradition.

Literary Forms: Media of the Hagiographic Discourse

Buddhist Historiographies

As indicated above, Japanese monks did not feel much inclined to record the history of Buddhism in Japan or to collect biographies of eminent monks of all traditions. If they did, their motivation was extrinsic. The most famous early history of Buddhism in Japan, the *Genkō shakusho* (元亨釋書; Book on Buddhism from the Genkō Era; *DBZ* 101), for instance, was compiled by the Rinzai (臨濟) Zen monk Kokan Shiren (虎關師錬; 1278–1346) in response to a request by the Chinese Chan master Yishan Yining (一山一寧; 1247–1317), who had asked for a history of the Japanese saṅgha. Realizing that there existed no such text, Kokan Shiren collected all relevant information available to him and compiled a book in 30 scrolls. Scrolls 1 through 19 contain more than 400 biographies of important Buddhist figures assigned respectively to one of ten categories in accordance with their fields of specialization. This part is clearly modeled after the Chinese "biographies of eminent monks." In deviation from the Chinese *gaoseng zhuan*, scrolls 17 through 20 render biographies of "virtuous men of old," "rulers and high officials," "noble gentlemen and simple folk," "nuns and other women," "immortals," and "numina and ghosts." The rest (20–26: charts; 27–30: monographs) follows the pattern of secular Chinese historiography. Kokan Shiren presented his pioneering work to Tennō ("Emperor") Go-Daigo (後醍醐; r. 1319–1338) in 1322.

Transsectarian Biographies of Buddhist Virtuosi

As already stated, collections of biographies of Buddhist monks of all doctrinal inclinations or sectarian affiliations were the standard model of Buddhist historiography in China but not in Japan.

There is some evidence that before 984 there existed a text called *Nihonkoku meisō den* (日本國名僧傳; Biographies of Famous Monks in the Country of Japan; Kamens, 1988, 196), but since it is lost, the earliest preserved *kōsō den* seems to be the one compiled by the lay Buddhist Chūren (仲廉居士; dates unknown) under the title *Nanto kōsō den* (南都高僧傳; Biographies of Eminent Monks of the Southern Capital; *DBZ* 101) during the first half of the 13th century. It contains 17 brief biographies of monks belonging to the Hossō and the Sanron traditions, a list of 54 administrators (*bettō* [別當]) of the Kōfukuji Temple (興福寺) of Nara, biographies of 46 high-ranking priests mostly affiliated with either the Tendai (天台) or the Shingon (真言) school, an "*abhiṣeka* initiation lineage" (*kanjō kechimyaku* [灌頂血脈]) of the Shingon school that goes from the Buddha Mahāvairocana to the monk Shinkei (新真慶), and a genealogy of Kūkai's (空海; 774–835 CE) disciples and of heads of the Tōji Temple (東寺) of Kyoto.

Around the same time, another transsectarian collection of biographies of Buddhist monks was compiled by a monk affiliated with the Kegon (華嚴) school, named Sōshō (宗性; 1202–1278). The first version of the text entitled *Nihon kōsō den yōmonshō* (日本高僧傳要文抄; Selection of Essential Texts on the Biographies of Eminent Japanese Monks; *DBZ* 101) was completed in 1249 and contained the biographies of 15 monks, unlike the classical Chinese *kōsō den* or the *Genkō shakusho* lacking any evident organizational structure. In 1251 the text was expanded by the biographies of 11 more monks and by accounts of laypersons such as Crown Prince Shōtoku (聖徳太子; 574–622 CE), various emperors (*tennō* [天皇]), and other persons who played some role in the development of Japanese Buddhism. Some of them are explicitly called "bodhisattvas." The decision to include laypeople in collections of "biographies of eminent monks" was revolutionary but became a standard in Japan.

It took more than 450 years thereafter before the Rinzai Zen monk Mangen Shiban (卍元師蠻; 1626–1710) ventured to compile a comprehensive, transsectarian collection of 1,412 major (plus 252 minor) biographies of monks and other figures important for Japanese Buddhism, such as Crown Prince Shōtoku, the sun goddess Amaterasu (天照), and the deified unifier of Japan, Toyotomi Hideyoshi (豊臣秀吉; 1536–1598). In 1702 Shiban published the *Honchō kōsō den* (本朝高僧傳; Biographies of Eminent Monks in Japan; *DBZ* 102/103). It seems likely that he was inspired by the *Daming gaoseng zhuan* (大明高僧傳; Biographies of Eminent Monks of the Great Ming Dynasty) that was brought to Japan in 1651 and by the increasing interest of Japanese intellectuals in classical Chinese historiography. Evidently, Shiban hoped that the Chinese would read his *Honchō kōsō den* and realize that the Japanese were culturally equal to them. Although Shiban criticizes the *Genkō shakusho* for being incomplete, his work can be described as a combination of Kokan Shiren's model and the Chinese *kōsō den.*

Sectarian Collections of Biographies of Buddhist Virtuosi

The sectarian bias that informed Buddhist biographical collections in Japan early on became even more pronounced in the 17th and 18th centuries due to the Tokugawa rulers' attempt at complete state control over religion. One means to achieve that goal were the so-called temple regulations (*jiin hatto* [寺院法度]) that forced the Buddhist institutions to reorganize strictly along sectarian lines and sharpen their specific sectarian profile doctrinally, institutionally, and historically.

An early example of the sectarian approach is the *Yahō meitoku den* (野峰名徳傳; Biographies of Famous Virtuous Men from Mount [Kō]ya; *DBZ* 106). The author, the Shingon monk Jakuhon (1631–1701), deplored the inadequate presence of monks from Mount Kōya in the *Genkō shakusho* and therefore collected and published the biographies of 70 monks of Mount Kōya's Hōkō‘in Temple.

The *Jōdo hasso retsuzen denki san* (淨土八組列全傳記纂; Serial Compilation of Complete Biographical Records on the Eight Patriarchs of the Pure Land [i.e. Aśvaghoṣa, Nāgārjuna, Vasubandhu, Bodhiruci, Tanluan, Daochuo, Shandao, and Hōnen]; *JZZ* 16) was completed by Jikkan (直勧; dates unknown) in 1680. In 1704 Sen‘yo Shin‘a (宣譽心阿; dates unknown) published a collection of 194 biographies, the *Jōdo honchō kōsō den* (淨土本朝高僧傳; Biographies of Eminent Monks of the Pure Land in Japan; *JZ* 17). In many cases, only the names of the "outstanding monks" are mentioned. One year later, a collection of biographies, the *Jōdo resso den* (淨土列祖傳; Serial Biographies of the Patriarchs of the Pure Land; *JZZ* 16), was published by Gonteki (嚴的; dates unknown). In this text, 81 biographies of outstanding Jōdo monks are presented.

In 1693 the Sōtō monk Tangen Jichō (湛元自澄; ?–1699) compiled a collection of 70 biographies, the *Nichiiki tōjō shoso den* (日域洞上諸祖傳; Biographies of the Various [Sō]tō Patriarchs in Japan; *DBZ* 110). In the preface, he deplores the insufficient documentation of the authentic transmission of Sōtō teachings in Japan. In 1708 the monk Tokuhō Ryōkō (德翁良高; 1649–1709) compiled the *Zoku nichiiki tōjō sho-soden* (續日域洞上諸祖傳; Supplement to the Biographies of the Various [Sō]tō Patriarchs in Japan; *DBZ* 110), which contains 91 biographies. In the preface, the author laments the underrepresentation of Sōtō monks in the *Genkō shakusho.* A few years later, in 1717, Zōsan Ryōki (藏山良機; ?–1729) published the *Jūzoku nichiiki tōjō sho-soden* (重續日域洞上諸祖傳; Another Supplement to the Biographies of the Various [Sō]tō Patriarchs in Japan; *DBZ* 110), containing 94 biographies.

Legitimistic and Genealogical Records of Buddhist Clerics

The distinction between sectarian collections of biographies of Buddhist virtuosi and genealogical records of Buddhist clerics, which serve legitimizing purposes, is tenuous, and the two categories may overlap. Texts of this category are less focused on hagiography and more on genealogy, that is, they focus on the construction of unbroken, legitimate personal succession. In extreme cases, they present not much more than bloodlines (*kechimyaku* [血脈]) of authentic dharma transmission (*denpō* [傳法]; i.e. the authority to teach and transmit the doctrine of a particular school) or lists of succeeding abbots of certain monasteries. Being neither biographic nor hagiographic in a stricter sense, they stand outside the scope of this article. In some cases, however, such genealogies are supplemented by brief biographical data. An early Japanese example is the *Shingon fuhō sanyō shō* (真言付法纂要抄; Essential Selection of Compilations on the Transmission of Shingon; T. 77), published in 1060 by the Shingon monk Jōson (成尊; 1012–1074). This compilation provides brief biographical accounts of the so-called eight patriarchs of this tradition, from Nāgārjuna to Kūkai.

One early legitimistic and genealogical record of Buddhist clerics, the *Sanron soshi denshū* (三論祖師傳集; Collection of Biographies of the Founding Masters of the Three Treatises [School]; *DBZ* 111), was produced by Gakuryū (學隆) in 1204, revised in 1258 by Shōshu (聖守), and continuously enlarged until the 17th century. It is arranged in a chronological order, opening with Śākyamuni and closing with the 33rd generation of abbots of Tōnan'in (東南院), a sub-temple of Tōdaiji (東大寺) in Nara. The 49 accounts vary in length, and in some cases, only the names of the dharma heirs are given. Typical hagiographic elements such as miracles and paranormal deeds are largely absent. The authors were obviously alarmed by the institutional weakness of the Sanron school in Japan.

A similar problem concerned the schools of the Pure Land tradition established by Hōnen, which were not accepted as independent denominations before the 17th century. Among the many obstacles on the way to emancipation from the Tendai school was the lack of an unbroken bloodline of authentic

dharma transmission. Rather fruitless attempts to establish a genealogy of patriarchal succession were made in the *Kango tōroku* (漢語燈錄; Record of [Sayings of Hōnen] in Chinese). In this collection of texts attributed to Hōnen, we find the *Ruijū jōdo goso den* 類聚淨土五祖傳; Classified Collection of Biographies of the Five [Chinese] Patriarchs of the Pure Land; *JZ* 9). Another collection of biographies, the *Jōdo goso den* (淨土五祖傳; Biographies of the Five Patriarchs of the Pure Land), is contained in Kakunyo's (1270–1351) biography of Hōnen, the *Shūi kotoku den'e* (拾遺古德傳繪; Gleanings of the Illustrated Biography of the Virtuous of Old; *HDZ*), completed in 1301. In this text, written in Japanese, brief accounts of the conversion, virtues, and salvation of the Chinese Pure Land pioneers Tanluan (476–542 CE), Daochuo (562–645 CE), Shandao (613–681 CE), Huaigan (7th cent. CE), and Shaokang (?–805 CE) are given. As these collections are confined to Chinese patriarchs without any personal connections, they could hardly function as evidence for the independence of the Pure Land tradition.

As the Zen tradition is based on the principle of personal "transmission from one mind to the other" (*ishin denshin* [以心傳心]), legitimistic and genealogical records of patriarchs have always played a crucial role here. Accordingly, the dominant literary form of Zen hagiography is the genre of so-called records of the transmission of the light/lamp (of the dharma), or *dentō roku* (傳燈錄)/ *denkō roku* (傳光錄), established in China. As texts of this kind focus on the act of dharma transmission – usually a dialogue between master and disciple that awakens the mind of the latter – they also belong to the genre of "records of the sayings (of the Zen masters)" (*goroku* [語錄]). However, *dentō roku* / *denkō roku* or *goroku* texts styled after Daoyuan's (道原; dates unknown) famous *Jingde chuandeng lu* (景德傳燈錄; Records of the Transmission of the Lamp from the Jingde Era; T. 51; publ. in 1004) never gained much prominence in Japan. One of two exceptions – the other being Mangen Shiban's *Enpō dentō roku* (see below) – is the *Denkō roku* (傳光錄; Record of the Transmission of Light; T. 82) completed in 1300 by Keizan Jōkin (1268–1325), the second "great founder" of the Sōtō tradition and of the temple Sōjiji. This remarkable compilation picks up the genealogy presented by Zhijue 智炬 (fl. around 800 CE) in his *Baolin zhuan* (寶林傳; Traditions of the Jeweled Grove) and recounts the biographies of 53 lineage holders from India, China, and Japan. The single biographies have an innovative structure that distinguishes Keizan's work from its Chinese predecessors, but it follows their model in its disinterest in miracle stories and its focus on dialogues between master and disciple. The ideal Zen master is portrayed not as a miracle-working ascetic or learned scholar but rather as someone whose awakening cannot be grasped intellectually and whose conduct cannot be judged by worldly moral standards.

The early Hokke school founded by Nichiren (日蓮; 1222–1282) had the same problems as the competing Pure Land schools. It was not officially recognized as an independent school and suffered from internal fragmentation. All the more it seemed necessary for the competing parties to assert themselves as the only legitimate lineage. Thus in the early 14th century, Nichidō (日道; 1283–1341), a dharma heir of Nichiren's disciple Nikkō (日興; 1246–1333), published the *Sanshi go-den dodai* (三師御傳土代; Draft of the August Biographies of the Three Masters; *NZ* 2), claiming that Nichimoku (日目; 1260–1333) of the Fuji branch of the Hokke school was the legitimate successor to Nichiren and Nikkō.

At some times in their histories, even the established institutions felt obliged to reassert their genealogies. In 1493, for instance, Sonzū (尊通; dates unknown) of the Jimon branch of the Tendai school compiled the *Mii shokutōki* (三井續燈記; Record of the Continuous Lamp of Mii[dera]; *DBZ* 111).

Another text modeled after the Chinese pattern of *dentō roku* / *denkō roku* was compiled in 1678 by Mangen Shiban in his *Enpō dentō roku* (延寶傳燈錄; Record of the Transmission of the [Dharma] Lamp from the Enpō [Era]; *DBZ* 108/109). It comprises 1,023 accounts of monks from various Zen lineages and in addition information on monks of other schools, emperors, empresses, and other laypeople – reflecting Mangen Shiban's ecumenical outlook. In addition to the *res gestae* (*gyōjō* [行狀]), Shiban presents nonbiographical subgenres such as *ki'en* (機緣; opportunities), *goku* (語句; statements), *mondō* (問答; dialogues), and *geju* / *geshō* (偈頌; hymns).

A Rinzai Zen genealogical work with a very limited scope was presented by Tōyō Eichō (東陽英朝; 1428–1504) in 1496. The text entitled *Shōbōzan rokuso den* (正法山六組傳; Biographies of the Six Founders of Shōbōzan [i.e. Myōshinji]; Ogisu, 1979) was a contribution to the revitalization of the prestigious Myōshinji temple complex.

Solitary Biographies of Famous Buddhist Figures

Only the most popular and prominent Buddhists – predominantly founders of a major school or legendary figures around which a specific cult had evolved – were honored by solitary biographies. Most of these biographies were rather extensive and elaborate. Outstanding examples are the biographies of Shōtoku Taishi, Gyōki (行基; 668–749 CE), Saichō (最澄; 767–822 CE), Kūkai, and Hōnen.

Illustrated Biographies of Single Famous Buddhist Figures

In some cases, the biographies of prominent figures such as the above mentioned were richly illustrated (*eden* [繪傳]) and published in the format of "picture scrolls" (*emakimono* [繪巻物]), which became popular in the late Heian and Kamakura periods. These scrolls were gradually unrolled from right to left so that scene after scene of the sequential story became visible. In general, a detailed textual passage was followed by a picture showing the event described in the text. Such elaborate picture scrolls were rather expensive, and their usage was a privilege of the aristocratic elite. From the 12th century on, "picture-explaining dharma masters" (*etoki hōshi* [繪解法師]) were employed by the temples for the purpose of proselytization and moral edification among the nobility in order to gain their support. From the Kamakura period, however, being better suited for transportation, less expensive picture scrolls as well as "hanging pictures" (*kakefuku* [掛幅]; *kakemono* [掛物]; *kake'e* [掛繪]), depicting several episodes simultaneously on one picture with very little or no text, were also used by professional wandering entertainers such as *biwa hōshi* (琵琶法師; lute-playing dharma masters), blind elocutionists in monastic garments who accompanied their recitals by playing the Japanese lute (*biwa*) and their female counterparts, *etoki bikuni* (繪解比丘尼; picture-explaining *bhikṣuṇī*s) or *kanjin bikuni* (勸進比丘尼; fundraising *bhikṣuṇī*s; also known as *kumano bikuni* [熊野比丘尼]). While these pseudo-monastic entertainers preferred descriptions of hell and paradise, the monastic *etoki hōshi* tried to gain financial support by, among other things, using illustrated hagiographies of prominent monks associated with their respective temples.

The person who figured most prominently in illustrated hagiographies was Crown Prince Shōtoku, whose cult flourished especially in the precincts of the Shitennōji Temple. His marvelous life was first depicted on sliding screens or doors (*shōji'e* [障子繪]), in the Kamakura period also on hanging pictures and picture scrolls. All these illustrated hagiographies are commonly known as *shōtoku taishi eden* (聖徳太子繪傳), the oldest among which is a sliding screen painted by Hata no Chishin (秦致真; also known as Hata no Chitei [秦致貞]; dates unknown) in 1069, known as *Hōryūji Tōin eden shōji'e* (法隆寺東院繪傳障子繪).

An outstanding example of an elaborate picture scroll depicting the life of a famous monk is the illustrated biography of the venerable Ippen (*Ippen Shōnin eden* [一遍上人繪傳)]), an itinerant monk and the founder of the Jishū. The earliest version was produced in 1299 by Ippen's disciple Shōkai (聖戒; 1261–1322; text) and En'i (圓伊; dates unknown; illustrations). Another tradition of illustrated biographies of Ippen was started by Sōshun's *Yugyō Shōnin engi'e* (遊行上人緣起繪; Illustrated Account of the Origins of the Venerable Traveler [i.e. Ippen]; Sōshun, 1979) completed in 1307.

Almost as famous as the *Ippen Shōnin eden* is the *Shōnin gyōjō ezu* (法然上人行狀繪圖; Illustrated Life of the Venerable Hōnen; *HDZ*), an *emakimono* produced by order of the retired emperor Go-Fushimi (後伏見; r. 1298–1301) in 1307 by the ninth abbot of Chion'in temple, Shunjō (舜昌; 1255–1335; text; in 48 scrolls, a reference to Amida's (Skt. Amitābha/Amitāyus) 48 vows.

Besides those of Hōnen and Ippen, illustrated biographies exist, for instance, (1) of Shinran (親鸞; 1173–1262), the founder of the Pure Land school: the *Honganji/Zenshin Shōnin Shinran den'e* (本願寺善信聖人親鸞傳繪) completed in 1295), text provided by Shinran's great grandson Kakunyo (覺如; 1270–1351), illustrations by Jōga (淨賀; Kakunyo, 1994), and (2) of Kūkai: the *Kōbō Daishi gyōjō ekotoba* (弘法大師行狀繪), completed between 1374 and 1389 by Yūkō (祐高), Yukitada (行忠), and two other persons (Yūkō, 1990).

Accounts of Salvation through a Particular Form of Devotion

Accounts of salvation achieved by practicing particular forms of devotion were quite popular during the second half of the Heian period, especially the genre of *ōjōden* (往生傳; accounts of births [in the Pure Land]), due to the growing popularity of the Pure Land cult. The Chinese prototype of this genre was the chapter 6 of Jiacai's (迦才; 7th-cent.) *Jingtu lun* (淨土論; Treatise on the Pure Land; T. 47). In contrast to standard biographies, texts of the *ōjōden* type are dominated by a relative rather than an absolute chronology, and the stories focus on events that caused, accompanied, or proved the protagonists' salvation and that demonstrate the

In contrast to standard hagiography, the protagonists of *ōjōden* are not necessarily virtuous or charismatic. Often their only virtue is piety. Much emphasis is put on visible signs proving successful passages to the Pure Land, such as miraculous music filling the sky, scent, and purple clouds.

The first and best-known collection of *ōjōden*, the *Nihon ōjō gokuraku ki* (日本往生極樂記; Records of Births in the [Land of] Utmost Bliss from Japan; Inoue, 1995), was compiled in 986 CE by Yoshishige no Yasutane (慶滋保胤; c. 931–c. 997/1002), a lay practitioner affiliated with a brotherhood of pious laypeople and monks related to the famous Tendai scholar Genshin (源信; 942–1017), who popularized the Pure Land cult on Mount Hiei and beyond. It is a collection of 42 accounts on persons who gained birth in Amida's Pure Land. Among the protagonists are monks (26), novices (2), nuns (3), male lay practitioners (4), and female practitioners (6), in precisely this hierarchical order, which is only violated by the first account, dealing with the crown prince Shōtoku's *ōjō* (birth in the Pure Land). Yoshishige no Yasutane's *Nihon ōjō gokuraku ki* constitutes the blueprint for all *ōjōden* to follow and also inspired edifying narratives of the *setsuwa* (説話; edifying tales) type in general. A number of sequels were published in the 11th and 12th centuries, namely, the *Zoku honchō ōjō den* (續本朝往生傳; Further Birth Accounts from Japan; Inoue, 1995) by Ōe no Masafusa (大江匡房; 1041–1111), *Shūi ōjōden* (拾遺往生傳; Gleanings of Birth Accounts; Inoue, 1995), *Go-shūi ōjōden* (後拾遺往生傳; More Gleanings of Birth Accounts; Inoue, 1995) by Miyoshi no Tameyasu (三善爲康; 1049–1139), and *Honchō shinshū ōjōden* (本朝新修往生傳; New Edition of Birth Accounts from Japan; Inoue, 1995) by Fujiwara no Munetomo (藤原宗友), who completed this work in 1151.

A rather curious collection of *ōjōden* is the *Tenjiku ōjō kenki* (天竺往生驗記; Miraculous Records of Births [in the Pure Land] from India; *JZZ* 16), falsely attributed to Vasubandhu. Some doctrinal biases and the emphasis put on the practice of calling Amida's name, by which 35,900 people in the western part of India allegedly gained *ōjō*, suggests that the text was completed in the Kamakura period under the influence of Hōnen's teachings. Intertextual evidence as well as the usage of particular terms and concepts, however, indicates a production before 1111 (Fukagai, 1972; Blum, 2007).

Paradoxically, the fast spread of Hōnen's teaching of certain salvation by calling Amida's name in the Kamakura period made the production of *ōjōden* for the sake of proselytization unnecessary. New collections were not produced before 1685, when the monk Kōsai (向西; dates unknown) published his *Nyonin ōjōden* (女人往生傳; Accounts of Women Who Gained Birth). More *ōjōden* were produced in the 18th and 19th centuries:

- *Shinmon kenken ōjōden* (新聞顯驗往生傳; Recently Heard Accounts of Obvious Proves for Births; Kasahara, vol. II, 1978–1980), completed in 1711 by Shin'a Kanen (真阿珂然; 1669–1745);
- *Sesshū shiso ōjō kenki* (勢州緇素往生驗記; Marvelous Records of the Births of Monks and Laymen from Sesshū; Kasahara, vol. II, 1978–1980), written by Daishun (大順; 1711–1779) and published in 1780;
- *Shinsen ōjōden* (新撰往生傳; Newly Compiled Birth Accounts; *JZ* 17), completed around 1793 by Fūkō Ryōgin (風航了吟; ?–1802);
- *Shokoku kenmon kinsei ōjōden* (諸國見聞近世往生傳; Recently Heard Birth Accounts of Recent Times from Various Provinces; Kashiwahara, 1995), completed around 1820 by Ryū'en (隆圓; dates unknown);
- *Kinsei ōjōden* (近世往生傳; Birth Accounts of Recent Times), written by the same author in 1824 and supplemented in 1827 and 1830;
- *Nihon ōjōden wage* (日本往生傳和解; Japanese Birth Accounts Rendered in Japanese), written in 1851 by Shōshubō Sōjun (正聚房僧純; 1791–1872);
- *Sennen ōjōden* (專念往生傳; Accounts of Births by the Single-Minded *Nen*[*butsu*]), completed in 1863 by Onkū (音空).

Somewhat related to the genre of *ōjōden* are collections of stories about devout followers of the Jōdo Shin school, which first appeared during the late Edo period. These texts, known as "accounts of wonderful persons" (*myōkōninden* [妙好人傳]; Shinshū Shiryō Kankōkai, 2009), depict the humble and pious lives of people who perfectly embody the ideals of the Jōdo Shin – that is, to be modest, assiduous, and obedient in this world governed by the ruler's law (*ōbō* [王法]) while bearing the Buddha's dharma (*buppō* [佛法]) in their hearts and faithfully anticipating salvation in the world to come, namely, birth in the Pure Land. The first collection of *myōkōninden* was compiled by Gōsei (1721–1794), a priest of the Nishi Honganji Temple of the Jōdo Shin school, printed posthumously in

1842 and variously supplemented in the following years. More *myōkōninden* were published during the Meiji (1868–1912) and Taishō (1912–1926) periods (Kikufuji, 2003; Asaeda, 1987; Doi, 1981).

A collection of 129 edifying and often miraculous narratives fostering and glorifying the cult centered on the *Lotus Sūtra* was compiled in 1043 by Chingen under the title *Dainihonkoku hokkekyō genki* (大日本國法華經驗記; Records of Miraculous Events Related to the *Lotus Sūtra* from the Great Country of Japan; Inoue, 1995). In his preface, Chingen refers to a lost *Fahua yanji* (法花驗記; Records of Miraculous Events Related to the Lotus [*Sūtra*]) written by the Tiantai monk Yiji (義寂; c. 919–987). Like most *ōjōden*, the stories in Chingen's collection are less interested in biography than in marvelous events. In contrast to the *ōjōden*, many of the protagonists are hermits who practice strict asceticism on holy mountains.

Accounts of miraculous experiences of followers of other cults are also extant, for instance, the *Jizō bosatsu reigenki* (地藏菩薩靈驗記; Accounts of Miraculous Events Related to the Bodhisattva Kṣitigarbha; middle Heian period), *Sannō reigenki* (山王霊験記; Accounts of Miraculous Numinous Events Related to the [God] Mountain King; 1288), *Hasedera Kannon genki* (長谷寺觀音靈驗記; Accounts of Miraculous Numinous Events Related to Avalokiteśvara of the Hasedera Temple; 1200–1209), and *Kasuga Gongen reigenki* (春日權現靈驗記; Accounts of Miraculous Numinous Events Related to the Provisional Manifestation of Kasuga; 1309).

Sources

As Shinohara Kōichi (1988) has convincingly shown for China, the original source material of the hagiographers was mainly derived from grave inscriptions and orally transmitted miracle stories. Surprisingly, there are almost no examples of grave inscriptions in the Chinese style in Japan before the 17th century. Nevertheless, it was common practice to collect information on a deceased eminent monk among his disciples and have an official compile a biography (Schamoni, 2009, 190). Miracle stories were another important source. In contrast to China, however, biographies of monks in Japan were also included in secular historical writing, which served as a reservoir for hagiographers. Furthermore, temple archives, inscriptions at cultic centers, and local traditions were utilized. The authors or compilers of religious biographies rarely mention their sources in detail. Once hagiographical literature and edifying narratives were widely distributed, life accounts of charismatic figures as well as miraculous stories were "recycled" again and again.

Functions

As was the case in other religions, Buddhist hagiographies were produced and used for specific purposes such as proselytization and the popularization of Buddhist concepts, norms, and ideals; vitalization of particular cults; propaganda and fundraising (*kanjin* [勸進]) for the benefit of religious institutions; identity politics; and legitimation of religious authority. The charismatic figure portrayed in hagiography functioned as a model to be followed and/or as an object of worship.

Authors and Their Motives

Religious biographies and hagiographies in Japan were produced by monks, lay practitioners, literati, and state officials. Sometimes the authors remain anonymous, but evidently they all represent an intelligentsia, capable of writing classical Chinese. Accordingly they represented the norms and ideals of the ruling elite.

The authors' motives for producing hagiographic texts are closely related to the specific functions that the texts were designed to fulfill. In a few cases, the authors inform their readers about their personal motives and intentions, although these tend to be rather stereotypical. The following types of motives explicitly mentioned by the authors can be distinguished:

- to spread the Buddha dharma and to strengthen people's faith;
- to propagate moral norms by example of the virtuous protagonists;
- to assert certain claims vis-à-vis competing Buddhist groups;
- to stimulate a particular cult;
- to establish karmic ties with a buddha, a bodhisattva, a fellow practitioner, or a saintly person;
- to gain religious benefit; and so on.

Religious Ideals

The religious ideals propagated in hagiographical writing vary greatly in accordance with the genre,

ls

s propagated in hagiographical
y in accordance with the genre,

---

the purpose, and the "*Sitz im Leben*" of the texts. In relatively few cases is strict asceticism idealized, and in these cases, asceticism functions primarily as a means to achieve paranormal faculties rather than being seen as an expression of moral conduct or adherence to the precepts. Many protagonists are portrayed as miracle workers. Accordingly, miracles figure prominently in hagiographic collections of the edifying type. Among the miracles depicted in the texts, the following are found most frequently:

- divination, clairvoyance, visions, and prophetic dreams;
- telekinetic, levitation, bilocation, and supernatural locomotion;
- control over ghosts and demons, exorcism, and spiritual healing; and
- strange occurrences accompanying conception, birth, and death of the protagonist.

Among the predominant virtues and talents ascribed to the protagonists, we find the usual set: not only scholarship, education, artistic skill, eloquence, and so forth but also modesty, humbleness, diligence, deep faith, obedience, and filial piety.

In some cases, the protagonist is depicted as lacking all virtues besides one, for instance, he or she is a notorious evil doer but has deep faith, or behaves immorally but is justified to do so because his or her spiritual achievements set him or her beyond moral standards.

Recipients and "*Sitz im Leben*" (Sociological Setting)

It is hard to tell how biographies and hagiographies were actually received and by whom. First of all, the "*Sitz im Leben*" of these texts depended on the specific genre to which they belonged and their specific functions. We may surmise that Buddhist historiographies were primarily used as repositories of historical information by scholarly monks who studied the history of a particular Buddhist school or tradition. Some texts were presented to the emperor with a view to gain support by the ruler once he recognized the magnificence of Buddhism and its representatives. Whether or not the rulers really read such texts is unknown. Likewise, collections of biographies of Buddhist virtuosi may have been produced with a view to gain support by the nobility, for Buddhist institutions in general but more likely for particular temples or monasteries, especially in the case of sectarian collections. Solitary biographies of famous Buddhist figures were probably studied by members of the respective tradition. In addition these biographies provided the materials for public preaching and proselytization. For these two purposes, illustrated texts on picture scrolls or hanging pictures were preferred. Accounts of spiritual salvation by a particular cult in all likelihood circulated among members of the respective cult as means of strengthening faith, practice, commitment, collective identity, and group solidarity.

Teaching Literature

Tantric Prakaraṇas

Prakaraṇas are usually short or mid-length treatises on a particular aspect of doctrine and/or practice, either tacitly endorsing and promoting a viewpoint or phrased in an apologetic style; in other words, they are descriptive or argumentative, essay-style exegetical writings. While there is nothing specifically tantric about the term *prakaraṇa* itself, in the present article it refers to those related to esoteric literature. These treatises do not claim to be revelation: the author is known, or there is at least supposed to have been a human author, even if authorship is frequently debated. Examples of a treatise being attributed to an already well-known figure in order to increase its prestige abound. Some *prakaraṇas* proved to be very influential, as they are frequently quoted, endorsed, and debated.

The boundary lines between *prakaraṇas* and other genres such as commentaries or ritual manuals are not always so sharp, since works of the latter type often contain argumentative excursuses, which can be seen as mini-treatises (one such example is a treatise embedded in the *Vimalaprabhā*, a commentary to the *Kālacakratantra*; Gnoli, 1997). Moreover, some *prakaraṇas* were so prestigious and influential that later scriptural compilers took over from them entire paragraphs, thus "scripturalizing" passages that were presumably seen as important. In cultures in which tantric literature has been canonized (China, Tibet), there is no separate section dedicated to *prakaraṇas*; instead they are found dispersed among other genres of exegesis, sometimes affiliated to a particular cycle of scriptural revelation.

Topics can be varied. A popular theme is the surveying of Buddhist revelation, evaluating the virtues of one doctrine over another, and showing how the tantric revelation fits into the scheme. It did not escape the attention of authors that esoteric teachings were of a very different type when compared to mainstream Buddhism, and thus quite a lot of effort went into justifying not only their place but also their superiority. However, sometimes the theme of a treatise can be narrowly specialized, for example the precise number of initiations (*abhiṣeka*) and what they should consist of. For the historian these are very precious documents, since they are crucial for reconstructing the intellectual landscape of medieval Indian Buddhism in general and esoteric Buddhism in particular.

An argumentative *prakaraṇa* is typically written in prose, but the *kārikā* style, fully versified form is not unknown; some are written in mixed prose and verse. Following the age-old model, after the topic has been pointed out, possible objections are listed and refuted employing reasoning (*yukti*) and the authority of revelation and previous masters (*āgama*), either by allusion or direct quotation. Descriptive *prakaraṇas* are usually in verse, the density of which suggests that this is mainly a mnemonic device. These do not typically follow the argumentative style, but almost always endorse a particular doctrinal perspective, at the expense of competing views.

Even if a particular *prakaraṇa* is not openly argumentative, the designation is similar to the titles of those that are. The headings of both kinds of treatises employ terms such as *tattva* (reality) or a synonym thereof; other words commonly employed include *nirukti* (elucidation), *pradīpa* (lamp), *nirākaraṇa* (refutation), or *siddhi* (proof or accomplishment). Furthermore, not infrequently a descriptive treatise was followed by an argumentative commentary either by the author himself or a disciple.

Although quite a few *prakaraṇas* have survived in the original Sanskrit, some of the most important and influential ones can now be accessed only in Tibetan translations, many of which are of poor quality. The individual texts discussed below are for the most part those whose original is extant, but exception is made in those cases where the work is too important to ignore. The survey is not comprehensive.

Padmavajra's *Guhyasiddhi*

The *Guhyasiddhi* of Padmavajra (The Accomplishment of the Secret; *Gsang ba grub pa*; D 2217/P 5016) is very probably an 8th-century CE work. The Sanskrit original is available, but it is very poorly transmitted; the only edition thus far (Rinpoche & Dwivedi, 1987, 5–62) should be considered a very tentative

Also available online – www.brill

attempt. The work is arranged in nine chapters and it is almost entirely in verse. The *Guhyasiddhi* seeks to elucidate a number of points about what it sees as the fundamental tantric scripture, the *Guhyasamājatantra*, which is unequivocally seen as the culmination of Buddhist revelation. The author advocates a complete, unapologetically antinomian spiritual programme for practitioners of varying abilities and accomplishments based on that scripture, beginning with the service of a *guru*, receiving initiation followed by diligent meditative practice, sexual yoga beginning with a real woman and culminating with a visualized internal consort, and various kinds of post-initiatory observance (*caryā*). One such passage (ch. 8, esp. v. 12) betrays intimate familiarity with rival Śaiva cults (Tanemura, 2008, 55–58; Sanderson, 2009, 144–145).

Indrabhūti's *Jñānasiddhi*

The *Jñānasiddhi* (Accomplishment of [Nondual] Gnosis; ed. Bhattacharyya, 1929, 31–100; Rinpoche & Dwivedi, 1987, 89–158; *Ye shes grub pa*; D 2219/P 3063) is confessedly a practical manual, but it is much more than that, as the author frequently digresses into supportive philosophical discussions, such as the Yogācāra controversy of *sākāra* and *nirākāra* (i.e. whether or not the perceiving mind "takes the form" of the perceived object). The work, which is structured in 20 chapters, is no doubt early, perhaps from the 9th century CE. Unfortunately, it is also rather badly transmitted (de Jong, 1998) in relatively late paper manuscripts. Just like Padmavajra, Indrabhūti promotes a unambiguously transgressive spiritual programme: the practitioner is free to do anything provided that he maintains meditative identity with the deity. The work is imbued with the spirit and diction of the *Sarvabuddhasamāyogaḍākinījālaśaṃvara*, a scripture the author also frequently quotes and refers to (Sanderson, 2009, 155–156, 163).

Jñānapāda's *Ātmasādhanāvatāra*

Perhaps one of the earliest argumentative *prakaraṇas* of late tantric Buddhism is to be found among the works of Jñānapāda or *Buddhaśrījñāna (late 8th-early 9th cent. CE). His *Ātmasādhanāvatāra* (An Introduction to Accomplishment in the Body; *Bdag sgrub pa la 'jug pa*; D 1860/P 2723) is extant in Sanskrit (Kawasaki, 2004, 51) but remains inaccessible. More than half of the original can be recovered from two long excursuses in a still unstudied recension of a work called the *Sāramañjarī* (for the catalogue entry, see Sferra, 2008, 45). The work seeks to advocate, defend, and harmonize the fundamentally tantric practice of visualizing oneself as a deity with Yogācāra Buddhism.

Works of the Ārya School

The so-called Ārya school is one of the two most influential traditions of *Guhyasamājatantra* exegesis. While the fundamental text of this group, the *Pañcakrama* (The Five Stages; *Rim pa lnga pa*; D 1802/P 2667) deals almost exclusively with practice (a comprehensive study, edition, and French translation can be found in Tomabechi, 2006), the *Sūtaka* or *Sūtakamelāpaka* (The Integration of *Sūtras*, *Tantras*, and *Kalpas*; *Spyod pa bsdus pa'i sgron ma*; D 1803/P 2668), better known under the otherwise unattested title as the **Caryāmelāpakapradīpa* of deutero-Āryadeva (most likely early 9th cent. CE) also deals with doctrinal matters, advocating a gradual path of tantric practice as the culmination of Mahāyāna in the form of a conversation between master and disciple (edited and translated into English in Wedemeyer, 2007). The *Cittaviśuddhiprakaraṇa* (A Treatise on the Purification of Mind; *Sems kyi sgrib pa rnam par sbyong ba zhes bya ba'i rab tu byed pa*; D 1804/P 2669) of presumably the same, tantric Āryadeva is a defense of antinomian practice and an attempt to show that in spite of all appearances, such a path is in perfect harmony with Mahāyāna philosophy (the latest edition and study, greatly in need of revision, is Varghese, 2008; for another translation, see Wedemeyer, 1999, 357–382). Attributed to the same author, the *Svādhiṣṭhānakramaprabheda* (An Elucidation of the Stages of Self-empowerment; *Bdag byin gyis brlab pa'i rim par rnam par dbye ba*; D 1805/P 2670) is another work on self-identification with the deity; it is deeply influenced by the *Sarvabuddhasamāyogaḍākinījālaśaṃvara*. It has been edited (Pandey, 1997, 169–194) and translated into English in C.K. Wedemeyer, 1999, 383–391.

Śāntarakṣita's *Tattvasiddhi*

The most widely known *prakaraṇa* is perhaps the *Tattvasiddhi* (A Proof of Reality; *De kho na nyid grub*

vasiddhi

prakaraṇa is perhaps the
eality; *De kho na nyid grub*

pa; D 3708/P 4531) attributed to Śāntarakṣita. Both the Tibetan tradition and some modern scholars (e.g. Mishra, 1985–1986, 123–124) maintain that this author is the same as the first abbot of Bsam yas and the author of the *Tattvasaṃgraha*, a philosophical work. However, it is much more likely that the author is a deutero-Śāntarakṣita, perhaps from the 9th century CE and not the 8th. The only complete edition of the Sanskrit text thus far is a draft by K.N. Mishra, which remains unpublished but available since 1986. A complete edition by T. Tomabechi incorporating the readings of a palm-leaf manuscript found in China is forthcoming (announced in Steinkellner, 2008, 291). Partial editions have been published in Moriguchi Kōshun, 1993 (with a Japanese translation and an examination of texts quoted by the work) and E. Steinkellner, 2001 (the passage is translated into English in Steinkellner, 2008). All the manuscripts used in these editions are rather poor paper witnesses. The overall goal of the *Tattvasiddhi* is to justify antinomian and anti-ascetic tantric practice, promoting the idea that great bliss (*mahāsukha*), which is supposedly enjoyed by liberated beings, can only be produced by sensual bliss (*sukha*). To this end, the author employs a variety of techniques, chief among which is a type of inference developed by the logician Dharmakīrti (Steinkellner, 1999, 355–360). Although the work lacks the sophistication and elegance of logico-philosophical authors, it proved important and influential, as parts of it were incorporated into at least one scripture fashioned in the late 10th or early 11th century (Szántó, 2013b, 349). At present, there is no complete translation of the text; a comprehensive summary can be found in E. Steinkellner, 2008, 293–294.

Anaṅgavajra's *Prajñopāyaviniścayasiddhi*

The chief idea of Anaṅgavajra's work (Establishing the Ascertainment of Wisdom and Means; *Thabs dang shes rab rnam par gtan la dbab pa'i sgrub pa*; D 2218/P 3062; ed. Bhattacharyya, 1929, 3–27; Rinpoche & Dwivedi, 1987, 63–87) is the importance and indispensability of a master and the initiations and instructions provided by him in order to obtain success on the tantric path. Large blocks of this text have been transformed into scripture, namely, the *Sampuṭodbhavatantra* (Szántó, 2013b, 353, 354, 356). The dating of the author is uncertain, but he must, on account of the mentioned adaptation, precede the end of the 10th century.

*Tripiṭakamalla's **Nayatrayapradīpa*

The **Nayatrayapradīpa* (A Lamp [to Elucidate the Respective Superiority of] the Three Ways; *Tshul gsum gyi sgron ma*; D 3707/P 4530) is a lengthy and sophisticated work now available only in Tibetan. The author's name has been transmitted and tentatively reconstructed in a variety of ways (*Tripiṭakamala, *Tripiṭakamāla, *Tripiṭakakamala) of which *Tripiṭakamalla ("Champion of the Three Canons") is the most plausible. A critical edition of the Tibetan is lacking but a substantial portion has been studied and translated in I. Onians, 2002, 92–139. The author presents the three ways – the way of hearers (Śrāvakayāna), the great way (Mahāyāna), and the *vajra* way (Vajrayāna) – in an inclusivistic model. His teaching on the superiority of Vajrayāna or tantric teachings over mainstream Mahāyāna is encapsulated in the following celebrated verse, which is often quoted and thus available in the original:

> *ekārthatve 'py asaṃmohād bahūpāyād aduṣkarāt* |
> *tīkṣṇendriyādhikārāc ca mantraśāstraṃ viśiṣyate* ||
> (the last quarter is also seen as *mantranītiḥ praśasyate*, or *mantranītir viśiṣyate*)
>
> Even if the aim is the same, the mantra teaching is distinguished [from that of the Perfections] by its lack of confusion, many methods, easiness and appropriateness for those of sharp faculties. (trans. Onians, 2002, 88)

The author argues that the tantric path does not have a different goal than that of the Mahāyāna, but it is supreme to it in these four ways. The text then proceeds to elaborate on these four kinds of superiority in great detail. The author must be quite early: his paradigmatic tantric scripture is the *Guhyasamājatantra* and he does not seem to quote any text later than the 9th century CE.

*Dharmendra's **Tattvasārasaṃgraha* and *Udbhaṭa's **Mantranayāloka*

The otherwise unknown authors *Dharmendra and *Udbhaṭa were master and disciple as is clear from the latter's testimony. *Dharmendra's **Tattvasārasaṃgraha* (A Compendium on the Essence of Reality;

De kho na nyid kyi snying po bsdus pa; D 3711/P 4534) is a long work on Mahāyāna soteriology. In the last section the author states that he chose not to engage with the Vajrayāna because although the tantric revelation is legitimate, in this degenerate age there are no suitable candidates for its practice. *Udbhaṭa's work, the **Mantranayāloka* (A Look at the Way of Mantras; *Gsang sngags kyi tshul gyi snang ba*; D 3710/P 4533) is an apology for this statement, which proved very controversial with contemporaries, although this author is not quite as dismissive as his master. Judging from the textual pool cited in the two works (e.g. the *Guhyendutilaka*, the *Paramādya*, already the **Nayatrayapradīpa*, as well as some now completely lost works), both must date from circa the 9th century CE.

Aśvaghoṣa/Vāpilladatta's *Gurupañcāśikā*

The *Gurupañcāśikā* (Fifty [Stanzas] on the *Guru*; *Bla ma lnga bcu pa*; D 3721/P 4544) is a short but very influential work already cited in the 10th century, in actual fact for the most part an anthology of scriptural verses, describing the qualities of a tantric master and how disciples should interact with him. At present we are aware of only two Sanskrit manuscripts, both fragments (Lévi, 1929, also contains a French translation; Szántó, 2013a; Pandey, 1997, 33–40 misleadingly prints the entire Sanskrit text, but the latter part is a back translation from Tibetan marked only by square brackets). There is also a rather inferior Chinese translation (事師法五十頌; T. 1687). The manuscript studied by S. Lévi also transmits two further small works, lists of the so-called fundamental (*mūlāpatti*) and gross trespasses (*sthūlāpatti*), essentially major and minor commandments for a tantric initiate. There are several other such works deserving closer attention (a preliminary overview is presented in Davidson, 2002, 322–327). In spite of their brevity, these texts allow valuable insights into the inner workings of a tantric community.

The works of Advayavajra and his followers

Nearly all the works of the early 11th-century author known as Advayavajra or Maitreyanātha (or even Avadhūtipāda and Maitrīpāda) may be considered as *prakaraṇas*. This famous master is among the first tantric authors to have come to the attention of modern scholarship, when a collection of nearly two dozen of his short treatises was published by H.P. Shastri (1927). A new edition of this corpus – with the exception of the *Tattvaratnāvalī*, for which see Ui Hakuju, 1952 – using new manuscript material accompanied by Japanese translations has been published by the Mikkyō-seiten Kenkyūkai (Esoteric Scriptures Study Group; 1988, 1989, 1990, 1991). A comprehensive account of Advayavajra's thought is still lacking; the latest word on the subject is H. Isaacson and F. Sferra, 2014. At least two topics from his works merit and received special attention. The first concerns initiation: the author seems to have held a minority view concerning the correct sequence of blisses (*ānanda*) that are experienced during sexual initiation; this was one of the greatest debates among tantric authors of the period. His teachings on this theme were defended by one of his disciples, Rāmapāla, in his *Sekanirdeśapañjikā* (A Commentary to the Instruction Concerning Initiation; *Dbang bskur ba nges par bstan pa'i dka' 'grel*; D 2253/P 4098). This latter work is comprehensively studied, edited, and translated in H. Isaacson and F. Sferra, 2014. The second topic associated with Advayavajra is the so-called non-tantric practice of the "great seal" (*mahāmudrā*; Isaacson & Sferra, 2014, 411–420).

The Works of Vāgīśvarakīrti

A close contemporary of Advayavajra was Vāgīśvarakīrti, who was best known for his argumentative works and passages concerning initiation, more specifically the fourth initiation (*caturthābhiṣeka*), of which he was an advocate. To this day, the most comprehensive study of Vāgīśvarakīrti's works is a monograph in Japanese (Sakurai, 1996), which includes an edition of his initiation manual containing a defense of sexual initiation for qualified monks (on which see Onians, 2002, 279–289). His *Tattvaratnāvalokavivaraṇa* (An Elucidation of "A consideration of Precious Reality"; *De kho na nyid rin po che snang ba'i rnam par bshad pa*; D 1890/P 2754, 4793; Sanskrit and Tibetan edition in Pandey, 1997, 83–142) is for the most part an elaborate defense of the fourth initiation (Isaacson, 2010, 269–271), dispelling a variety of contradicting doctrines, whereas his **Saptāṅga* (On the Seven Ancillaries; *Yan lag bdun pa*; D 1888/P 2752) deals

chiefly with the same issue even n
(Sakurai, 1996, 212–220), analyzing
views concerning the topic.

chiefly with the same issue even more extensively (Sakurai, 1996, 212–220), analyzing no less than 17 views concerning the topic.

Jñānakīrti's *Tattvāvatāra*

Already cited by early 11th-century authors, the *Tattvāvatāra* of Jñānakīrti (An Introduction to Reality; *De kho na nyid la 'jug pa*; D 3709/P 4532) is a lengthy and comprehensive overview beginning by defining types of Buddhist practitioners according to ability, with the paths suitable for them, and culminating in a discussion of the highest spiritual attainment. The work is cited by later Tibetan authorities as one advocating the achievement of the "great seal" based on exclusively exoteric, *sūtra*-based practices. While many of the quotations from the text can be found in the original elsewhere, the work itself is lost in Sanskrit, and the Tibetan translation has still not received the attention it deserves.

Jñānaśrī's **Vajrayānāntadvayanirākaraṇa*

The authorship of the **Vajrayānāntadvayanirākaraṇa* (Dispelling the Two Extreme Views Concerning the Tantric Way; *Rdo rje theg pa'i mtha' gnyis sel ba*; D 3714/P 4537) has not been established with certainty. The work was probably written in the 11th century. It is a learned and sophisticated text that first seeks to prove that the tantric revelation is indeed the Buddha's teaching, and then proceeds to describe its superiority to exoteric Buddhism with great emphasis on the idea of "skill in means" (*upāyakauśalya*). The discussion of the tantric path's superiority closely mirrors the discussion of the superiority of the Mahāyāna in the classic *Mahāyānasūtrālaṃkāra*. The critical edition of the Tibetan translation has not yet been published (the Sanskrit original has been lost), but two in-depth studies greatly facilitate access to this text (Kyuma, 2009; Tanemura, 2009).

Ratnavajra's *Caturthasadbhāvopadeśa*

Ratnavajra was a Kashmiri author also known as Sūkṣmāvartabhaṭṭa; his activity can be placed with certainty in the first half of the 11th century. The text entitled *Caturthasadbhāvopadeśa* (A Teaching Concerning the True Nature of the Fourth [Initiation]; *Bzhi pa'i don rnam par nges pa'i man ngag*; D 2475) is extant in Sanskrit, but it is at present inaccessible (Kawasaki, 2004, 51). This fully versified, short and dense work seeks to refute the opinion of certain "Eastern scholars" (almost certainly Vāgīśvarakīrti and perhaps Ratnākaraśānti) that the fourth initiation (*caturthābhiṣeka*) is a separate rite. Ratnavajra points out that previously the "fourth" was unknown in Kashmir, but it is now practiced in spite of its spurious nature.

*Jñānākara's **Mantrāvatāra* and **Mantrāvatāravṛtti*

*Jñānākara is very likely another 11th-century author. His 60-verse **Mantrāvatāra* (An Introduction to the [Way of] Mantras; *Gsang sngags la 'jug pa*; D 3718/P 4541) and an autocommentary (*Gsangs sngags la 'jug pa'i 'grel pa*; D 3719/P 4542) seek to briefly introduce the tantric path under 15 headings, such as the appropriate practitioner, the types and nature of his accomplishment, the proper and improper way of practice, and so forth. The originals of both works have been lost. The **Mantrāvatāra* is not argumentative as such, but its introduction states quite clearly that it is intended to refute "perverted views." The commentary makes it clear that in the author's mind this meant a literal interpretation of the *tantra*s promoted by what he views as false teachers. Some verses of the root text (as quoted by the Tibetan scholar Bu ston Rin chen grub) have been translated in J. Hopkins, 2008, 227–230.

Jinasujayaśrīgupta's *Abhiṣekanirukti*

The *Abhiṣekanirukti* (An Explanation of [the Third and Fourth] Initiations; *Dbang bskur ba'i nges pa bstan pa*; D 2476/P 3301; *Dbang gi don nges par brjod pa*; D 2477/P 3302; ed. by Isaacson used with attribution in Onians, 2002, 349–368; trans. Onians, 2002, 322–348; new draft in Isaacson, 2008) is a complex and in some ways unusual treatise on viewpoints concerning the function of "knowledge of wisdom initiation" (*prajñājñānābhiṣeka*), in which the initiand has to copulate with a consort. Jinasujayaśrīgupta lists three views of the *yogatantra*s (by which here the *Guhyasamājatantra* is meant) and three views of the *yoginītantras* (represented by the *Hevajratantra*), but unconventionally he does not commit himself to any of them; instead he exhorts the reader to select the appropriate one. The two Tibetan translations differ in attribution: the first is assigned to Ratnākaraśānti and the second to Jinasujayaśrīgupta, but it can be shown that the true author is the latter, probably a disciple of the former, and that the attribution was altered deliberately in order to increase the work's prestige (Isaacson, 2010, 267).

Śrīlakṣmī's *Advayasiddhisādhanopāyikā*

Although Śrīlakṣmī or Lakṣmīkarā is presented by the tradition as having lived at least three centuries earlier, it is unlikely that she dates from before the late 10th century. Her *Advayasiddhir nāma sādhanopāyikā* (A Practical Manual Called The Attainment of Nonduality; *Gnyis su med par grub pa'i sgrub thabs*; D 2220/P 3064) is a short, 36-verse work, a gnostic practical manual, for the most part a compilation of well-known aphorisms (for the best edition, see Rinpoche & Dwivedi, 1987, 159–164). The practitioner is exhorted to give up external methods and focus on worshipping the *guru*, sexual yoga with a consort, and the cultivation of nonduality. Perhaps the only truly distinctive feature of the work is that it is signed by a female author.

The anonymous *Subhāṣitasaṃgraha*

The *Subhāṣitasaṃgraha* (A Collection of Aphoristic Statements) was one of the earliest tantric Buddhist works published in Europe, with profuse apologies for and a condemnation of its contents (Bendall, 1903; 1904a; 1904b). The text is available only in Sanskrit and it is poorly transmitted. As the title shows, the author did not mean to be original and his work is for the most part indeed a collection of quotations. However, the manner in which these are strung together is significant, as is the fact that many of these passages are not available in the original elsewhere. By making reference to authorities both scriptural and exegetical, the compiler wished to present a comprehensive map of tantric practice underpinned by Madhyamaka philosophy. The work is greatly inspired by Jñānakīrti's *Tattvāvatāra*.

The anonymous *Yuktipradīpa*

A completely unknown *prakaraṇa* by an anonymous author entitled *Yuktipradīpa* or *Yuktidīpa* (A Lamp of Reasoning) was discovered by R. Sāṅkṛityāyana (1937, 27–28) on his second journey to Tibet. The current state of the manuscript is unconfirmed, and it is accessible only through very low quality, sometimes barely legible photographs in the Tucci collection (Sferra, 2008, 42). There is no edition of the text and it is doubtful whether one could be produced at this stage. From what is legible, it would seem that the author's main opponents were subitists who claimed that liberation is possible merely by having received a *guru*'s teaching, without the need for gradual and constant meditative and ritual practice. Judging by the quotations, the author was a follower of the so-called Jñānapāda school.

PÉTER-DÁNIEL SZÁNTÓ

Doxography: Tibet

In the Tibetan context, the term "doxography" refers mainly to surveys of tenets (*grub pa'i mtha'*; Skt. *siddhānta*) or philosophical views/opinions (*lta ba*; Skt. *darśana*/*dṛṣṭi*) of the Indian Buddhist and Hindu traditions (Hopkins, 1996, 170; Mimaki, 1982, 2). In a broader sense, it encompasses the systematization of tantric systems and spiritual approaches (Dalton, 2005, 119–120; Dalton & van Schaik, 2003, 154–155; Mimaki, 1994, 121–126). In the classical sense of the term, however, Tibetan doxographical (*grub mtha'*) works capture the philosophical quintessence of the Indian Buddhist and non-Buddhist schools of thought in so far as these works represent a delineation of an author's perspective on the framework of the Buddhist and non-Buddhist religious-philosophical schools of India in its current state of exegesis. The overall value of these compilations was immediately tangible when substantial knowledge of Tibet's literature reached the West for the first time during the first half of the 19th century. Doxographical works occupied a key role in pioneering studies on the literary and philosophical outlines of Tibetan Buddhism, its internal structure and traditions, and the framework of Indian Buddhist philosophy as it was perceived and codified in Tibet. Apart from early sketches (Csoma de Kőrös, 1834, 276; 1838) and a summary based thereon (Burnouf, 1844, 445–452), the doxograpical system of Indo-Tibetan Buddhism was mapped for the first time by V.P. Vasil'ev (1860, 285–367) based on the doxographies of the Dge lugs pa scholars 'Jam dbyangs bzhad pa'i rdo rje (1648–1721) and Lcang skya Rol pa'i rdo rje (1717–1786). As a philosophical codification of Buddhism, doxographical works and doxographical knowledge are an integral part of the spectrum of Tibetan Buddhist knowledge, literature, and education.

Doxographical Texts in Tibet: Origin, Function, and Stylistics

In the Western scientific tradition, the term "doxography" has been coined by H. Diels (Runia, 2010, 272–274; Meijer, 2006, 24). Understood since then also as "the broader tradition of discussion and summary of ancient philosophical doctrines" (Runia, 2010, 273), the doxographical process in ancient Greece as such emerged out of a problem-oriented approach to handling different opinions (*doxai*) of previous philosophers in the light of one's own discussions and philosophical explorations (as e.g. done by Aristotle) and discussing them within a certain frame of topics such as physics, ethics, and logic (Runia, 2010, 275).

In contrast to the historical diversification of Buddhism in India, the origin of philosophical or doxographical systematization and composition in Tibet as well as in China (as far as it concerns Buddhist philosophy) is inherently connected with their overall reception of Buddhism. Just as the translation of a doctrinally heterogeneous corpus of Buddhist scriptures into Chinese up to the time of Kumārajīva (350–409/413 CE) led to the formation of *panjiao* systems – a conclusive systematization of the translated Buddhist scriptures according to hermeneutical, diachronic, and doctrinal aspects (Wun, 2006, xix–xxi; Gregory, 1991, 115; Ocho Enichi, 1981, 71) from the early 5th century onward (Wun, 2006, 9–16), likewise the origin of the Tibetan doxographical tradition coincides with the first systematic reception of Indian Buddhism on the brink of the 8th century CE. Tibet's knowledge of India, its philosophical landscape and discourses among and between the Buddhist and non-Buddhist traditions, and thus the fundament of the Tibetan doxographical tradition rests on the translation of constitutive works of the Indian Buddhist tradition such as Bhāviveka's (6th cent.) *Madhyamakahṛdayakārikā*, its autocommentary the *Tarkajvālā*, Śāntarakṣita's (725–788) *Tattvasaṃgraha*, the *Jñānasārasamuccaya*, Udbhaṭasiddhasvāmin's (c. 9th cent.) *Viśeṣastava*, and Jitāri's (10th cent.) *Sugatamatavibhaṅgakārikā* (Mimaki, 1982, 2). The Tibetan translations of these works and their respective Indian commentaries constitute the prime sources for doxographical information insofar as they preserve, in varying quantity and detail, the discourses of the Indian Buddhist tradition with and the polemics against their opponents, which had developed and flourished in an intellectual setting of debate between the Buddhist and Hindu traditions. the older Buddhist tradition preserved a set of unfavorable or unacceptable views (Qvarnström, 1999, 172–173), the decisive intellectual and literary impulse for later developments might have taken place around the 6th century due to Bhāviveka (Qvarnström, 1999, 176–177), who depicts a range of religious-philosophical traditions according to their views (*darśanas*) on topics such as valid means of knowledge (*pramāṇas*) and categories of realities/principles (*tattvas*) – an approach that took even more concrete shape in the Tibetan doxographical literature (Eckel, 2008, 27–38).

With the advent of Buddhism, Tibet's culture began to be formed and transformed through waves of reception of Buddhist knowledge that reached Tibet through the translation of Buddhist literature from Sanskrit and Chinese, as well as the intellectual exchange between Tibet and its geographical neighbors over the subsequent centuries. The reception of Indian Buddhism and the translation of the constitutive works of several generations of Indian Buddhist thinkers stimulated the development of literary autochthonous genres that reflect these influences, ranging from scholastic commentaries on esoteric and exoteric texts to poetry, grammar, epics, law, and medicine, among other (Cabezón & Jackson, 1996, 13–15, 23–31). Besides comprehensive commentaries on classical Indian Buddhist works, Tibetan doxographies systematize and highlight various positions and questions in and derived from Indian Buddhist literature as well as the (hypothetical) school affiliations of their prominent scholars (see Mimaki, 1982, 29–40; 1983, 161–162; 1992, 12n27; 1994, 119). Especially in view of the exegesis of the Mahāyāna schools (i.e. Yogācāra and Mādhyamaka), Tibetan doxographical texts mirror the hermeneutical progress of Tibet's intellectual culture, exegetical developments, and sectarian discrepancies.

Doxographies were written by scholars of all major religious orders, including scholars of the indigenous Bon tradition (for an overview, see Mimaki, 1982, 6–9), varying in size from comprehensive treatments of several hundred pages in prose to summaries that are hardly more than a structural outline – a diversity that might reflect their purpose and usage, ranging from reference books to short summaries that are used as a template (for memorization) within the monastic curriculum (Hopkins, 1996, 173; 2003, 6). In view of its place in monastic education (Dreyfus, 2003, 112; 1997, 34), which revolves around principles of studying (*thos pa*; Skt. *śruta*), contemplation (*bsam pa*; Skt. *cintā*), and meditation (*sgom pa*; Skt. *bhāvanā*; Wangchuk, 2006, 227; Hopkins, 1996, 171), Tibetan scholars occasionally remark that studying (lit. hearing) includes the knowledge of doxographical systems in order to learn the basics of what shall be accepted and abandoned (*blang ba dang dor ba*; Skt. *heyopādeya*) in terms of philosophical views (Dorje, 2012, 99–100).

Despite the fact that the Tibetan tradition preserves narratives on the development of Buddhism in India as well as the spread of Buddhism in their own country, and that Tibetan scholars were aware of a relative chronology of the Buddhist schools (Jackson, 1987, 411–412n120), the core of doxographical expositions is concerned neither with the historiographical background, that is, the origin of the respective schools or traditions, nor with the history of Buddhism in general. These topics are confined to the genre of *chos 'byung* (history, genesis of Buddhism; Vostrikov, 1970, 139–179; van der Kuijp, 1996, 46–57) or *bstan rtsis* (chronology of the [Buddhist] doctrine; Vostrikov, 1970, 101–137). And even though larger doxographies might contain historiographical material, they are clearly confined to self-contained chapters, as can, for instance, be seen in the works of Rog bande Shes rab 'od (1166–1244; Cabezón, 2013, 16) and Klong chen pa (1308–1364; Butters, 2006, 708). The increasing differentiation of Tibet's religious landscape, however, brought about literary compositions that treat the history and doctrines of the main religious orders (*chos lugs*), minor religious movements, and the indigenous Bon tradition under the same nomenclature *grub mtha'* (Mimaki, 1982, 2; 1994, 115). Hence, doxographical key issues and classifications are not restricted to the domain of doxographical texts but were, for instance, incorporated in works that come close to the concept of an encyclopedia (*bshad mdzod*), such as Don dam smra ba seng ge's (late 15th or early 16th cent.) *Bshad mdzod yid bzhin nor bu*, a compendium written for the laity (Smith, 2001, 216).

From a structural perspective, classical doxographical works reify the grand lines of the philosophical landscape as well as basic philosophical principles, including a depiction of the difference between Buddhism and everything that is not Buddhist, from a treatment of non-Buddhist traditions, through the clarification of the difference between the most salient characteristics of "Hīnayāna" (*theg dman*) and Mahāyāna (*theg pa chen po*), down to their main theme: the successive treatment of the four Buddhist schools of the Vaibhāṣika, Sautrāntika, Yogācāra, and Mādhyamaka as well as their respective subclassifications (Hopkins, 1996, 174; Jackson, 1987, 411–414n120; Mimaki, 1982, 18).

The non-Buddhist systems are basically summarized according to their depiction in the works of Bhāviveka and Śāntarakṣita (and their commentaries). Within the Tibetan scholastic literature, the "five dialectical schools" (*rtog ge sde lnga*) form a heterogeneous set that represents the major non-Buddhist traditions. It might, for instance, comprise the Sāṃkhya, "Īśvara" (incl. Vaiśeṣika and Nyāya), Vaiṣṇava, Jaina, and Lokāyata/Cārvaka, as they were adduced by Phywa pa Chos kyi seng ge (1109–1169; Jackson, 1985, 9n7). Other doxographers, however, occasionally included sections on Vedānta, Mīmāṃsa, or *vaiyākaraṇa* (relating to grammar), as is evident, for instance, in the *Grub mtha' chen mo* (Hopkins, 2003, 8–9).

The non-Buddhist schools are, from the Buddhist perspective, categorized according to their individual attitude toward a notion of eternalism (*rtag par smra ba*; Skt. *śāśvatavāda*) or nihilism/annihilationism (*chad par smra ba*; Skt. *ucchedavāda*), who recognize neither the nonessentiality of phenomena (*chos kyi bdag med pa*; Skt. *dharmanairātmya*), nor the nonessentiality of the person (*gang zag gi bdag med pa*; Skt. *pudgalanairātmya*) and thus lack the proper notion of the middle way (*dbu ma'i lam*; Skt. *madhyamā pratipat*).

The exposition of the Buddhist schools of philosophy follows the successive treatment of the Vaibhāṣika, Sautrāntika, Yogācāra, and Mādhyamaka – from the oldest to the highest system of philosophy. This scheme and sequence represents the *de facto* standard, which has been corroborated by Tibetan doxographers on the basis of Indian sources such as the *Hevajratantra*, Vajragarbha's *Ṣaṭsāhasrikāhevajraṭīkā*, and the *Jñānasārasamuccaya* (Jackson, 1987, 411–414n120).

Doxographical accounts of Buddhist schools generally follow a fixed exegetical scheme such as the following:

1. philosophical views (*lta ba*; Skt. *darśana/dṛṣṭi*);
2. conduct (*spyod pa*; Skt. *caryā*; or *spyod lam*; Skt. *īryāpatha*);
3. form of meditation (*bsgom pa*; Skt. *bhāvanā*); and
4. aspired soteriological result (*'bras bu*; Skt. *phala*).

An alternative, slightly reduced form of a school's doxographical account covers the following:

1. philosophical premises (*gzhi*; lit. basis/ground);
2. (spiritual) path (*lam*; Skt. *mārga*); and
3. result (*'bras bu*; Skt. *phala*).

Finally, doxographical accounts might apply the following fourfold scheme:

1. definition (*mtshan nyid*; Skt. *lakṣaṇa*);
2. subdivision (*dbye ba* or *rab tu dbye ba*);
3. etymology (*sgra bshad* as synonym of *nges tshig*; Skt. *nirukti*); and
4. the philosophical positions (*grub mtha'i 'dod tshul*) according to the philosophical basis, path, and result.

The greater part of doxographical texts is devoted to the analysis of philosophical views that focus on ontological and epistemological questions. Certain positions such as the acceptance of external entities (*phyi rol gyi don*; Skt. *bahirārtha/bāhyārtha*), or the question whether cognition is endowed with an image of the perceived object (*rnam pa dang bcas pa*; Skt. *sākāra*) or not (*rnam pa med pa*; Skt. *nirākāra*), were of such an importance that they led to independent doxographical perspectives (Mimaki, 1994, 117) as well as various subclassifications of the Sautrāntika and Yogācāra school in Tibet (on the latter, see Mimaki, 1992, 12; 1994, 117).

In order to depict each school's philosophical positions, Tibetan scholars deploy a set of ontological models. Despite exemptions and overlappings, the philosophical positions of the "Hīnayāna" schools (i.e. Vaibhāṣika and Sautrāntika) are rendered according to "five topics of knowables" (*shes bya'i gzhi lnga*), a delineation of the major ontological categories of the Abhidharma literature, which serves as a framework to capture each school's positions regarding the following:

1. sense data (*gzugs*; Skt. *rūpa*);
2. the mind (*sems*; Skt. *citta*);
3. mental factors or retinues (*sems las 'byung ba*; Skt. *caitta/caittasika*);
4. conditioned factors dissociated from thought/the mind (*'ldan min 'du byed*; Skt. *viprayuktasaṃskāra*); and
5. unconditioned factors (*'du ma byas*; Skt. *asaṃskṛta*).

Whereas the question of the substantial existence (*rdzas su yod pa*; Skt. *dravyasat*) and/or nominal existence (*btags par yod*; Skt. *prajñaptisat*) of entities is a central problem within the Vaibhāṣika and Sautrāntika context, the Yogācāra school is the predominant ontological model for the "three-nature" model (*mtshan nyid gsum/ngo bo nyid gsum*), which classifies the ontological status of phenomena as follows:

1. imaginary (*kun tu btags pa*; Skt. *parikalpita*);
2. dependent (*gzhan gi dbang ba*; Skt. *paratantra*); or
3. perfect (*yongs su grub pa*; Skt. *parinispanna*).

The ontological positions within the Mādhyamaka school are usually analyzed by way of the "two-truths" model or "two (modes of) reality" (*bden pa gnyis*; Skt. *dvayasatya*), which focus
tion of whether the status of phenor

When they do not interweave them in the exposition itself, doxographical works usually contain a section in which objections of opponents (*rgol ba*), rebuttals, or controversies (*rtsod pa*) are adduced and repelled or which explicitly deal with the refutation (*dgag pa*) of other schools – structural elements that mirror the Indian stylistic device of an opponent's objection (*pūrvapakṣa*) and its rebuttal (*uttarapakṣa*; Qvarnström, 1999, 174; Halbfass, 1981, 410). To what extent the Tibetan doxographical tradition reproduced arguments of the Indian discourse and which lines of thought are clearly intrinsic to the domain of the Tibetan intellectual tradition are questions yet to be fully answered. However, to some extent it is clear that distinctive Indian arguments were absorbed by Tibetan scholars and integrated into the autochthonous scholastic literature, as, for instance, the arguments of Kumārila and Śubhagupta (Mimaki, 1992, 3; 1982, 24).

Doxographical Composition in Tibet

In view of the otherwise voluminous corpus of Tibetan literature, the (known) number of doxographical texts predating the 13th century is relatively small. The first examples of doxographical writing stem presumably from the mid-8th/early 9th century. How comprehensive the Tibetan autochthonous literature has been during and especially in the aftermath of the disintegration of the Tibetan Empire from the mid-9th century CE onward (see Petech, 1994) can to some extent only be conjectured. A number of manuscripts found in Dunhuang (Mimaki, 1983, 6) and palace library records indicate early doxographical writing in Tibet (Mimaki, 1983, 9–10; Seyfort-Ruegg, 1981, 211n20). The few available texts that were written before the 9th century already bear witness to a broad approach to classify Buddhist thinking and practice.

One of the oldest transmitted works of doxographical character is the *Man ngag lta ba'i phreng ba* of (or ascribed to) Padmasambhava, a central figure in the early days of Buddhism in Tibet. Written on the basis of chapter 13 of the **Guhyagarbhatantra*, the text presents an exposition of some non-Buddhist systems and the Buddhist doctrines, leading from the Śrāvakayāna to Vajrayāna (and ultimately Rdzogs chen ["Great Perfection"]) by way of nine spiritual vehicles (Karmay, 2007, 137–138, 152–155). The work retained its prominence especially within the Rnying ma school, which is underscored by commentaries of the 11th-century scholar Rong zom pa (1012–1088; Karmay, 2007, 138) as well as of the 19th-century polymath Mi pham Rnam rgyal rgya mtsho (1846–1912; Phuntsho, 2007, 199; partly translated in Guenther, 1976). The *Bsam gtan mig sgron* of Gnubs chen Sangs rgyas ye shes (8th cent.), though not very influential in later centuries, distinctively confirms the existence of various approaches to structuring the heterogeneous forms of Buddhist thinking and practice in 9th century Tibet. Being perhaps partly influenced by Chinese sources, the work treats the different forms of Buddhist practice according to four paths based on their nonconceptual meditation:

1. a gradual approach ("not conceptualizing appearances"; *snang ba mi rtog pa*);
2. a simultaneous approach ("not conceptualizing non-appearances"; *mi snang ba mi rtog pa*);
3. Mahāyoga ("non-dual non-conceptualization"; *gnyis su med pa'i mi rtog pa*); and
4. Atiyoga ("spontaneously present non-conceptualization"; *lhun gyis grub pa'i mi rtog pa*; Dalton & van Schaik, 2003, 154–155, 160–161).

Another work of that period (8th or 9th cent.) comes from the hand of a Tibetan translator. In contrast to the tantric source of Padmasambhava, Ye she sde's *Lta ba'i khyad par* is based on exoteric literature (Seyfort-Ruegg, 1981, 226–227). The work became part of the Tanjur and was basically transmitted with it. Still topically rather than hierarchically organized, it covers a spectrum of themes and structural elements that became an inherent part of later doxographical works:

1. philosophical views (*lta ba'i bye brag*);
2. the three Buddhist vehicles (*theg pa*; Skt. *yāna*): Śrāvakayāna, Pratyekabuddhayāna, and Mahāyāna;
3. the four-gnosis model (*ye shes bzhi*; Skt. *caturjñāna*);
4. the three emanated bodies of the Buddha (*sku gsum*; Skt. *trikāya*);
5. the eight types of consciousness (*rnam par shes pa*; Skt. *vijñāna*);
6. the two modes of truth/reality (*bden pa gnyis*; Skt. *satyadvaya*);
7. the two kinds of nonessentiality (*bdag med pa*; Skt. *anātmaka/nairātmya*);

8. the three-nature model (*mtshan nyid gsum/ ngo bo nyid gsum*); and
9. the process of dependent origination (*rten cing 'brel bar 'byung ba*; Skt. *pratītyasamutpāda*; Seyfort-Ruegg, 1981, 215–225).

After the collapse of the Tibetan Empire and a transitional period, religious, scholastic, and monastic activities were reorganized in Tibet's periphery and later in central Tibet from the late 10th century onward. The doxographical compositions in the Rnying ma school were continued by the 11th-century scholar Rong zom pa, who wrote at least three smaller works of immediate doxographical concern (Almogi, 2013, 1331). The Rnying ma pa author Rog bande Shes rab 'od (1166–1244) wrote a work of a rather hybrid genre. His *Grub mtha' so so'i bzhed tshul gzhung gsal bar ston pa* consists of two major parts. The first part is dedicated to a range of topics that are otherwise confined to religious-historiographical works (*chos 'byung*), while the second half of his work constitutes a survey of the Buddhist vehicles from the Śrāvakayāna to the Mantrayāna (Martin & Bentor, 1997, 38–39; introduced and translated in Cabézon, 2013). A similar approach can be seen in Klong chen pa's (1308–1364) *Grub mtha' mdzod*, an extensive and central work in the Rnying ma school. Klong chen pa, too, starts with a history of Buddhism in general before he depicts the respective spiritual vehicles and schools, stretching from the conservative (and historically older) Śrāvakayāna to the Mantrayāna (Butters, 2006, 76–77). His work has been rendered into English twice (Butters, 2006; Barron, 2007).

Within the Bka' gdams pa tradition, the doxography of Dbus pa blo gsal (14th cent.) surely constitutes a culmination of doxographical composition in the Bka' gdams pa school, whose oldest conceivable layer is represented by Phywa pa Chos kyi seng ge's (1109–1169) *Bde bar gshegs pa dang phyi rol pa'i gzhung rnam par 'byed pa*, also known as the *Phyi nang gi grub mtha'* (Tauscher, 2010, 4–5), and Bya 'chad kha ba Ye she rdo rje's (1101–1175) *Grub mtha' chen mo* (Kapstein, 2009). As a student of Rig pal ral gri (1227–1305) and partly responsible for the constitution of the Tibetan canon at the Snar thang Monastery, Dbus pa blo gsal wrote his *Grub pa'i mtha' rnam par bshad pa'i mdzod*, also known as the *Blo gsal grub mtha'* (partially edited and translated in Mimaki, 1979; 1982; 1985; 1993), in 13 chapters, and shows, in comparison to Ye she sde's *Lta ba'i khyad par*, the hierarchical structure that was characteristic of doxographies at least since the 12th century.

The structure of the *Blo gsal grub mtha'* is as follows:

1. short summary;
2. detailed exposition;
3. Lokāyata ('Jig rten rgyang phan pa);
4. Sāṃkhya (Grangs can pa);
5. Śaiva (Dbang phyug pa);
6. Vaiṣṇava (Khyab 'jug pa),
7. Digambara (Gcer bu pa);
8. The formation of the 18 "Hīnayāna" schools (e.g. Mahāsaṅghika schools: 1. Pūrvaśaila, 2. Aparaśaila, 3. Haimavata, 4. Lokottaravāda, 5. Prajñāptivāda; Sarvāstivāda schools: 6. Mūlasarvāstivāda, 7. Kāśyapīya, 8. Mahīśāsaka, 9. Dharmaguptaka, 10. Bahuśrutīya, 11. Tāmraśāṭīy, 12. Vibhajyavāda; Sthavīra schools: 13. Jetavanīy, 14. Abhayagirivāsina, 15. Mahāvihāravāsina; Sāṃmitīya schools: 16. Kaurukullaka, 17. Avantaka, 18. Vātsīputrīya);
9. Vaibhāṣika (Bye brag tu smra ba);
10. Sautrāntika (Mdo sde pa);
11. Yogācāra/Cittamātra (Sems tsam pa);
12. Mādhyamika (Dbu ma pa); and
13. the path and result in the theories of the Buddhist schools (*lam dang 'bras bu'i tshul*; adapted from Mimaki, 1982, 18).

As far as it can be estimated at the present state of scholarship in the field, the number and interrelations of doxographical texts became increasingly complex in the 14th century. Although a thorough investigation of the respective issues is a desideratum, it has been suggested that works by Tsong kha pa (1357–1419), Klong chen pa (1308–1364), and Stag tshang Lo tsā ba (b. 1405) share an intellectual relationship that reflects exegetical and sectarian discrepancies of the 14th and 15th centuries (Hopkins, 1996, 172; 2003, 4–5). Hence 'Jam dbyangs bzhad pa'i rdo rje's (1648–1721) *Grub mtha' chen mo* (translated in Hopkins, 2003), one of the most comprehensive works of the genre and a core text of the Dge lugs pa tradition, was allegedly written in order to rebut certain points in Stag tshang Lo tsā ba's doxography (Hopkins, 1996, 172). The *Grub mtha' chen mo*, completed in 1689, was supplemented by an autocommentary ten years later (Hopkins, 2003, 6–8) and immediately influenced future doxographical compositions such as Lcang skya Rol pa'i rdo rje's (1717–1786) *Grub mtha' thub bstan lhun po'i mdzes rgyan* as well as his compendium *Dag yig mkhas pa'i 'byung gnas*, chapter 5 of which is devoted to the discussion of the four Indian Buddhist schools. Both texts were equally

influential during the early days of Western research on Tibet's philosophical traditions. The *Grub mtha' rin chen phreng ba* (discussed in Hopkins, 1996, 174–182) of Dkon mchog 'Jigs med dbang po (1728–1791) continues the composition of Dge lugs pa doxographies under the sway of 'Jam dbyangs bzhad pa'i rdo rje's text and represents a prototypical dGe lugs pa-doxography of the 18th century.

Structure of the *Grub mtha' rin chen phreng ba* (simplified adaption from Hopkins, 1996, 174):

Non-Buddhist schools:

- Vaiśeṣika (Bye brag pa) and Nyāya (Rig pa can);
- Sāṃkhya (Grangs can pa);
- Mīmāṃsā (Dpyod pa ba);
- Nirgrantha (Gcer bu pa); and
- Lokāyata ('Jig rten rgyang 'phan pa).

Buddhist schools:

- "Hīnayāna" (Theg dman);
- Vaibhāṣika (Bye brag [tu] smra ba);
- Sautrāntika (Mdo sde pa);
- Mahāyāna (Theg chen pa chen po);
- Yogācāra/Cittamātra (Sems tsam pa); and
- Mādhyamika (Dbu ma pa).

Thu'u bkwan Blo bzang chos kyi nyi ma's (1737–1802) *Grub mtha' shel gyi me long* (Clear Mirror of Philosophical Systems) is an exception among Tibetan philosophical writings. The text is rather "historico-philosophical" (Vostrikov, 1970, 154) than classically doxographical, in so far as it covers the religious-philosophical landscape of Central Asia instead of presenting a technical analysis of the Indian philosophical systems. Each tradition is roughly depicted along the lines of its origins and teachings, concluded by an evaluation in view of the author's own philosophical affiliation (Smith, 2001, 147–149; Vostrikov, 1970, 154–158). Even though Thu'u bkwan Blo bzang chos kyi nyi ma clearly attempted a fair-minded depiction of each tradition, his evaluation and critique are strongly influenced by his own Dge lug pa school affiliation (Jackson, 2006, 14). Thanks to its unique focus on the origins and tenets of the religious and philosophical traditions in India, Tibet, China, and Central Asia, his work's value was soon noticed by non-Tibetan scholars, first of all in Russia (Jackson, 2006, 2). The text has been studied for more than one and a half centuries (reviewed in Smith, 2001, 147–148; Vostrikov, 1970, 154–158; Jackson, 2006, 2–3), and an English translation was finally published in 2009 (see Jackson, 2009).

The general outline of the *Grub mtha' shel gyi me long* is as follows:

1. Buddhist and non-Buddhist schools of India;
2. the spread of Buddhism in Tibet and the Rnying ma pa school;
3. the Bka' gdams pa school;
4. the Bka' brgyud pa school;
5. the Zhi byed pa and Gcod tradition;
6. the Sa skya pa school;
7. the Jo nang pa school;
8. the Dge lugs pa school;
9. the Bön religion;
10. Confucius and Laozi;
11. Chinese Buddhism; and
12. Buddhism among the Mongols in Khotan and Shambhala (adapted from Smith, 2001, 148–149).

The composition of doxographical works in Tibet spans more than 1200 years. Works of classical Tibetan scholarship continue to be written, despite the cultural caesura of the 1960s and a tangible influence of modernity on Tibetan secular and religious culture. Doxographical composition in the Tibetan culture is therefore neither an early medieval nor a premodern relict but a living genre that has its roots in the inception of Buddhist culture on the roof of the world. As works that reflect the systematization of Buddhist philosophy, they have become an invaluable source for Tibetan and Buddhist studies and continue to be an important subject for academic research on Tibet's history of thought, insofar as they reflect the philosophical and exegetical development, as well as sectarian controversies surrounding, key philosophical issues explored by generations of Tibetan thinkers.

ERIC WERNER

Historiography

Historiography: South Asia

The first historical texts known from ancient South Asia are the Buddhist chronicles composed in Ceylon (Sri Lanka). Consequently, from a very early period, the history of Buddhism on the island is known much better than in any other part of South Asia. Besides texts on the general history of Buddhism, there are specialized chronicles on relics and so on, written in both Pali and Sinhala languages or in Southeast Asian vernaculars.

The traditional historiography of Buddhism begins in all schools with the reports on the first and second councils, held at Rājagaha (Skt. Rājagṛha) and Vesāli (Skt. Vaiśālī), respectively, which were handed down mostly in appendices to the *Vinayapiṭaka* of different schools (Demiéville, 1950, 241ff.). This is also the background and starting point of the sources of Sinhala Buddhist (Theravāda) historiography (Bechert, 1969), which comprises three basic texts extant in Pali: the historical introduction to commentary on the *Vinayapiṭaka*, the *Samantapāsādikā*, and two chronicles – *Dīpavaṃsa* (Chronicle of the Island [of Ceylon]) and *Mahāvaṃsa* (Great Chronicle). The sources and the development of these three texts were investigated in groundbreaking researches by W. Geiger (1856–1943) and E. Frauwallner (1898–1974). Recently, J.S. Walters tried to look at the chronicles from a very different angle in considering "the Vaṃsas as 'successions' of the Buddha's presence rather than mere 'chronicles' of events" (2000, 99; comp. Scheible, 2010).

Both *Dīpavaṃsa* and *Mahāvaṃsa* recount the history of Buddhism in Sri Lanka, beginning with its prehistory in India starting from the first two councils and continuing with the third council held at Pāṭaliputta (Skt. Pāṭaliputra; present-day Patna) under the leadership of Moggaliputta Tissa at the time of Aśoka and, according to the chronicles, 236 years after the Buddha's nirvāṇa (Dīp 7.37; comp. Mhv 5.280). This "council," which is known only to the Theravāda tradition, was, as convincingly argued by E. Frauwallner, a synod of a single school, at which the foundations of Theravāda were laid by Moggaliputta Tissa (Frauwallner, 1952, 258; 1982, 667). Much attention is paid to Mahinda as the person who was sent by Aśoka to bring Buddhism to Sīhaladīpa (Sīhala x [Tam.] Ilam > Por. Cillam, C[e]ilão > Ceylon).

Both chronicles contain much common material, including an important note in two verses of identical wording (Dīp 20.20–21 = Mhv 33.100–101) on the Tipiṭaka being committed to writing together with the commentary (*aṭṭhakathā*) for the first time during the reign of Vaṭṭagāmaṇī Abhaya (89–77 [29–17] BCE; for the dates, comp. Geiger, 1986, xx). Theravāda is the only school to remember this important turning point in the textual tradition, when orality gradually began to cede to the use of scriptures. The histories of other schools do not date back to a comparably early period, having been composed only much later, when a written canon (Tripiṭaka) had become a matter of course, which is most likely the reason why they are silent on this event. Occasionally, the recitation of individual Buddhist texts from the canonical scriptures is mentioned (von Hinüber, 1996, §182).

Besides the early ecclesiastical history of Buddhism, there is also a chronicle of kings, which begins with an enumeration of the rulers of the present world age down to the time of the Buddha and continues with the kings of Sri Lanka up to the 4th century CE. The same combination of religious and (to a certain extent) political history is also found in the 8th-century (?) Buddhist Sanskrit text, the *Mañjuśrīmūlakalpa* (Gupta, 1974, 121; Willis, 2005, 141) or in the Nepalese chronicles, about which hardly anything is known so far (Wright, 1877; Bajracharya & Michaels, 2012).

Although the frame of both chronicles is by and large the same, the older anonymous *Dīpavaṃsa* comprising 22 chapters called *Bhāṇavāra* (Units of Recitation) is much shorter. The introduction to the *Dīpavaṃsa* (Dīp 1.1) enumerates four points, which are treated in the following text according to the analysis by E. Frauwallner (von Hinüber, 1996, §184):

1. the visit of the Buddha to Ceylon (*dīpāgamana buddhassa* [the arrival of the Buddha on the island]) including the story of the relics and of the Bodhi tree (*dhātu-*, *bodhiyāgamana* [arrival of the relics, of the Bodhi (tree)]);

2. the history of the kings preceding the time of the Buddha (*rājavaṃsa* ["succession of kings"]);

3. the history of Buddhism beginning with the first council in India, continuing with Mahinda's

Also available online – www.brill

visit to the island, and including information on prominent monks and nuns from ancient Sri Lanka (*sāsanāgamana* ["the arrival of the teaching"]; *saṃghācariyavāda* ["opinion of the teachers of the saṅgha"]);

4. a chronicle of events under the kings ruling Sri Lanka (*narindāgamana* ["arrival of kings"]), adding political to ecclesiastical history and starting from an immigration from northwestern India to be dated perhaps to the 5th century BCE (Geiger, 1986, §42).

The leader of this immigration was Vijaya, the mythical first king of Sri Lanka. According to legend, Vijaya's hands (Pal. *pāṇi*) became as red as copper (Pal. *tamba*) when he touched the ground landing in Sri Lanka. Therefore, according to this popular etymology, the island is also called Tambapaṇṇi (Mhv 7.41; Skt. Tāmradvīpa; Grk. Ταπροβάνη [Taprobánē]; Por. Taprobana [que ora é Ceilão – "which today is [known as] Ceilão"; de Camões, 1572, x, 107]). The succession of the kings ends with the rule of Mahāsena (334–362 CE). Therefore, the *Dīpavaṃsa* may be dated to the second half of the 4th century CE.

The *Dīpavaṃsa* is composed in 1,334 verses in *śloka* (Geiger, 1901, 15; 1973, 247) and *jagatī* meters (4 times 8 and 4 times 11 syllables, respectively) with interspersed prose passages. The basis also of the metrical parts are the prose texts of the old *Aṭṭhakathā* "commentary." The style is often terse and clumsy to such a degree that the text becomes comprehensible only by comparing the corresponding passages from the later *Mahāvaṃsa*. These unusual features of the *Dīpavaṃsa* are mostly understood as pointing to an oral recitation of the text with accompanying explanations. The division of the text into *Bhāṇavāras* (recitations) seems to support this assumption. However, it should be kept in mind that some of these singular stylistic and linguistic peculiarities of the Pali used in the *Dīpavaṃsa* may reflect distinctive features of the Sinhala Prakrit used in its sources rather than orality or the inability of the author (von Hinüber, 1996, §183; Tsuchida, 1987).

Some events are told twice in the *Dīpavaṃsa*, rarely even three times. As E. Frauwallner following W. Geiger (1905) was able to demonstrate, these repetitions are due to material drawn from two different texts put together in a rather mechanical way. By the help of the commentary on the *Mahāvaṃsa*, the *Vaṃsatthappakāsinī* (see below), it is possible to identify the various sources of these different versions as the old and lost *Sīhalaṭṭhakathāmahāvaṃsa* (see below) in the recensions of two different monasteries, the Mahāvihāra and the Uttaravihāra, which is generally supposed to be identical with the Abhayagirivihāra (Frauwallner, 1984, 21). Both these versions seem to have drawn their material from a still older chronicle enumerating kings and, in addition, from an independent ecclesiastical history, which helps to explain certain differences in style in the *Dīpavaṃsa*. The chronicle and the ecclesiastical history sometimes refer to the same events, what also explains occasional duplications in the text (Frauwallner, 1984, 23). The older parts of both – the history of Buddhism up to the third council and the chronicle, dating back to the history of northern India – were imported in Sri Lanka, while the genuine Sinhala ecclesiastical history begins with the conversion of the island to Buddhism during the 3rd century BCE. These observations on the prehistory of the *Dīpavaṃsa* are possible because the unknown author did not make any attempt to harmonize his sources, when he composed perhaps the first Pali text in Sri Lanka after an interruption of two centuries of general decline in scholarship from about 150 to 400 CE (von Hinüber, 1996, 206).

At the same time, there is a striking similarity in the overall structure, the compilation of sources, and the arrangement of the text between the *Dīpavaṃsa* and the early tradition of Hindu Purāṇas, which might date back roughly to the same period. Verses incomprehensible without help from parallel Purāṇa passages occur (Rocher, 1986, 98) as they do in the *Dīpavaṃsa* (see above) due to the same method of compilation. Moreover, the topics dealt with – a succession of kings combined with mythological events – are not totally different, once Buddhist and Hindu concepts are interchanged (on the concepts in Jaina history, see Cort, 1995).

The usual chronological framework of both chronicles, and most likely already of their common source, as far as political history is concerned is the length of the reign of the various kings (Falk, 2002). In contrast, the events concerning the saṅgha are calculated by the time elapsed since Buddha's nirvāṇa (on the Buddhist and Indian concept of time, see Prasad, 1991; Malinar, 2007). Both political and religious history are connected in a famous synchronism, the "consecration" (Pal. *abhiseka*; Skt. *abhiṣeka*; anointing) of Aśoka, when 218 years had elapsed since the Buddha's nirvāṇa (Dīp 6.1; Mhv 5.21).

The *Mahāvaṃsa*, which covers the same period of time as the *Dīpavaṃsa*, is approximately twice as long, about 2,900 verses (Geiger, 1905, 29: 2915; but see also Geiger, 1901/ 1073, 15/247: 2904), mostly in

the *śloka* meter, except for one final verse in each of 35 out of the 36 sections (*pariccheda*) composed in different elaborate meters to mark the end of a chapter. The *Mahāvaṃsa* is earlier than the *Samantapāsādikā*, which in turn knows and quotes from the *Dīpavaṃsa* (Geiger, 1905, 78).

Next to nothing is known about Mahānāma, the author of the *Mahāvaṃsa*. According to the *Mahāvaṃsa* commentary, he lived in the monastery built by a certain general Dīghasanda. All attempts to connect this Mahānāma to other persons bearing the same and very common name have failed (von Hinüber, 1996, §185). His style is much superior to that of the author of the *Dīpavaṃsa*, and according to W. Geiger, he "deserved the name of a poet, was not a genius, but possessed taste and skill" (Geiger, 1901, 24; 1973, 256). In his introduction, Mahānāma criticizes his predecessors for being too verbose and inconsistent without, however, quoting any name. This criticism seems to be directed to either the *Dīpavaṃsa* or the *Sīhalaṭṭhakathāmahāvaṃsa*, if not to both.

Mahānāma greatly increased the text of the *Mahāvaṃsa* by including what originally seems to have been an independent epic of 861 verses on the ultimately victorious wars waged by Duṭṭhagāmaṇī Abhaya ("The Fearless"; 161–137 [101–77] BCE; see Geiger, 1986, xx) against the Tamil king Eḷāra (Geiger, 1901, 14ff.; 1973, 246ff.; Bretfeld, 2001, xxiff.). However, Mahānāma eliminated almost all passages belonging to the tradition of the Abhayagirivihāra. At the very end, Mahānāma recounts how the Mahāvihāra was destroyed and even briefly deserted under King Mahāsena (334–362) but reestablished under his son and successor Sirimeghavaṇṇa. Consequently, the *Mahāvaṃsa* is much more a genuine Mahāvihāra text than the *Dīpavaṃsa*.

After several centuries, Mahānāma's chronicle was continued and updated in the *Cūḷavaṃsa* (Little Chronicle), which, however, in the end grew longer than the original *Mahāvaṃsa*. Although this text is commonly known as *Cūḷavaṃsa*, there is no evidence for this title in the manuscript tradition. The first addition to the *Mahāvaṃsa*, which ends with the reign of Parakkamabāhu I (1153–1186), was compiled by Dhammakitti, who used different annals as well as *puññapotthakas* (merit books) kept by various kings to commemorate their donations to the saṅgha (von Hinüber, 1996, §187). Similar to the composition of the *Mahāvaṃsa*, which in a way celebrates the resurrection of the Mahāvihāra under Sirimeghavaṇṇa, Dhammakitti's share in the *Cūḷavaṃsa* (37.51 to 89.84) was composed at an important turning point in the history of Buddhism in Sri Lanka, when the reforms of Parakkamabāhu merged the different forms of Buddhism and united them in a uniform tradition, which follows the orthodoxy as practiced in the Mahāvihāra.

The text of the *Cūḷavaṃsa* continued to grow in three further steps. An anonymous author added chapter 80, verse 1 to chapter 90 verse 102 up to the time of Parakkamabāhu IV (1302–1332). His successor was Tibboṭuvāvē Sumaṅgala in the late 18th century, who brought the chronicle up to date until the reign of Kittisirirājasīha (1747–1781) in chapter 90 verse 105 to chapter 100 verse 301 (Geiger, 1929/1973, 260/274). This was also a time of reforms. The king reconstituted the almost extinct Buddhist order of monks at the initiative of the monk Välivitiyē Saraṇaṅkara (1698–1778), who, after a new lineage of ordination was imported from Siam in 1753, became the first Saṅgharāja (1753–1778) of the newly founded Syāmanikāya (group of monks within the *saṃgha* following the Siamese tradition).

When preparing the first print of the *Cūḷavaṃsa*, which appeared in 1877, the editors, Hikkaduvē Srī Sumaṅgala and Paṇḍita Devarakkhita Baṭuvantudāvē, added a brief chapter, 101, of only 29 verses, and closed the book (for the time being) with the British conquest and the subsequent end of the Buddhist kingdom of Kandy in 1815. The text ends with *iṅgirīsināmakā sabbaṃ rajjaṃ karagataṃ karuṃ* ("the [people] called Iṅgirīsi [English] took the whole kingdom into their hands").

The *Mahāvaṃsa* is explained in an anonymous commentary called *Vaṃsatthappakāsinī* ([Commentary] Revealing the Meaning of the [Great] Chronicle) of uncertain date (von Hinüber, 1996, §188). Because it was composed before the first enlargement of the *Mahāvaṃsa* and after the time of the great canon commentaries, a date around 7th or 8th century as proposed by G.P. Malalasekera (1899–1973), in his important introduction to the edition of the commentary, is generally accepted, although without any firm evidence. The commentator still had access to material lost today and, consequently, was able to include important additional information – for instance from the *Sīhalaṭṭhakathāmahāvaṃsa* (see below), which the commentary on the *Mahāvaṃsa* presupposes as the immediate source of Mahānāma (Frauwallner, 1984, 17). Of particular interest are the references to a second version besides the *Mahāvaṃsa* of the Mahāvihāra – that of the Uttaragirivihāra or Abhayagirivihāra (Frauwallner, 1984, 21) preserved in the *Vaṃsatthappakāsinī*. Moreover, different lost chronicles are mentioned. The relevant material is collected in G.P. Malalasekera's introduction mentioned above (lxviiiff.). The *Vaṃsatthappakāsinī* furthermore underlines that Mahānāma turned the prose text of the *Sīhalaṭṭhakathāmahāvaṃsa* into verses, as presumably did his anonymous predecessor in the *Dīpavaṃsa*. Therefore, the *Mahāvaṃsa* is also called *Pady(!)apadoruvaṃsa* (Large Chronicle in Metrical Words) in the commentary (Geiger, 1905, 47ff.), and the full title of the commentary is *Pajj(!)apadoruvaṃsavaṇṇanā Vaṃsatthappakāsinī* (Commentary on the Large Chronicle in Metrical Words Revealing the Meaning of the [Great] Chronicle), according to the colophon.

A much larger version of the *Mahāvaṃsa* was composed by an otherwise unknown Moggallāna in Southeast Asia at an unknown date. He expanded the text to 5,791 verses in 27 chapters (*paricchedas*; Geiger, 1905, 29). This extended *Mahāvaṃsa* is also known as the "Cambodian" *Mahāvaṃsa*, because all known manuscripts from Thailand are in Cambodian script, the script used for Pali texts in Siam (Central Thailand; von Hinüber, 1996, §189).

In contrast, there is also an abbreviated (*saṅkhepa*) version of the *Mahāvaṃsa*, the (*Mahā*) *Vaṃsamālī*(*nī*)*vilāsinī* (Graceful Garland of the Great Chronicle [?]), in only 13 chapters, which, however, also include a chapter on Buddhaghosa and a section called *Milindapañha*. Only two chapters are edited in Thailand – one containing the story of Buddhaghosa and the other that from King Bhātika (38–66 [98–126] CE) to King Mahāsena, abbreviating chapters 34 to 37 of the *Mahāvaṃsa* (von Hinüber, 1996, §190; Balee Buddharaksa, 2001). Therefore, little can be said about this text at present.

Besides the two chronicles, the early history of Buddhism is preserved also in the historical introduction (*Bāhiranidāna*; External [Circumstances] of the Origin [of the Vinaya]) to the *Samantapāsādikā* (The in Every Respect Pleasing [Commentary]) to the *Vinayapiṭaka* (von Hinüber, 1996, §208–220). This text focuses on the story of the development of the Tipiṭaka, particularly of the *Vinayapiṭaka*, which is described in great detail. The story begins with the events immediately after the nirvāṇa and ends with the recitation of the *Vinayapiṭaka* by Mahinda in Anuradhapura, thus handing the text over to the first genuine Sinhala Vinaya teacher, the monk Ariṭṭha, born from parents living on the island, as it is emphasized. With this event, the teaching (Pal. *sāsana*) of the Buddha "put down roots" (Pal. *mūlāni … otaranti*) in Sri Lanka.

The prose story with interspersed verses is structured along the lines given in a summary (Pal. *mātikā*) at the beginning and repeated at the end:

> Said by whom, when, why; remembered [*dhāritaṃ*: held] by whom and handed down [*ābhata*: brought, recited], and where it was established [*patiṭṭhita*: to which kind of persons was the *Vinaya* entrusted]. And having described this process … I shall compose the explanation of the meaning of the *Vinaya*. (Sp 3.17*–20*; trans. Jayawickrama 1962, 2)

According to this plan, almost all material from the chronicles referring to kings disappears, and the history of Sri Lanka ends at the time of Aśoka during the reign of the Sinhala king Devānaṃpiya Tissa, including some prophecies pointing to future meritorious deeds and works of kings to come such as Duṭṭhagāmaṇī Abhaya (von Hinüber, 1996, §212).

The *Dīpavaṃsa* and *Mahāvaṃsa* converted the introduction to the lost old Sinhala *aṭṭhakathā*, the (*Porāṇa*) *Sīhalaṭṭhakathāmahāvaṃsa* (The [Old] Great Chronicle in the Commentary [Written] in Sinhalese; see Geiger, 1905, 48) into an independent text. In contrast, the *Samantapāsādikā* seems to have preserved not only the original prose of the lost Sinhala *aṭṭhakathā*, the commentary on canonical texts supposed to have been brought to the island by Mahinda, but also the original position of the historical introduction at the very beginning of the new *aṭṭhakathā* in Pali.

Among the texts referred to in the *Mahāvaṃsa* commentary are the *Mahābodhivaṃsakathā* and (*Mahā*)*cetiyavaṃsakathā*. If the *Mahābodhivaṃsakathā* is identified following W. Geiger (1905, 53) with the undatable (10th-cent.[?]) *Mahābodhivaṃsa* (Story of the Great-Bodhi Tree), which tells the story of the of the Bodhi tree and the transfer of an offshoot from Bodh Gaya to Anuradhapura in the elaborate style of ornate poetry (*kāvya*), then the *Vaṃsatthappakāsinī* must be dated later than the 10th century, which is unlikely (von Hinüber, 1996, §191).

It is, however, certain that the (*Mahā*)*cetiyavaṃsaṭṭhakathā* ([Great] Commentary on the Chronicle of the *Cetiya*[s]) cannot be identical with the extant *Thūpavaṃsa* composed by Vācissara during the second half of the 13th century (von Hinüber, 1996, §192). Vācissara describes the construction of the Mahāthūpa (Great Stūpa; Snh. Ruvanväli "Sovaṇṇamālī-thūpa" [Stūpa of the Golden Wreath]) at Anuradhapura by King Duṭṭhagāmaṇi

Abhaya (101–177 [161–137] BCE). The history of relics enshrined in this stūpa is traced back to the division of the Buddha's relics immediately after the nirvāṇa. Among other important buildings mentioned is the famous Lohapāsāda ("Brazen Palace") in Anuradhapura. Furthermore, Mahinda's mission to Sri Lanka and the planting of an offshoot of the Bodhi tree in Anurādhapura are described. Both the *Mahābodhivaṃsa* and the *Thūpavaṃsa* were translated into Sinhalese at an early date. (The relation between the Pali and the Sinhalese *Thūpavaṃsa* was investigated in detail by S. Berkwitz [2004, 81ff.])

There is a number of smaller chronicles of various relics such as the *Dāṭhavaṃsa* (Chronicle of the Tooth [of the Buddha Preserved at Kandy]) by Dhammakitti during the 13th century (von Hinüber, 1996, §193), the so-far-unedited *Naḷātadhātuvaṃsa* (Chronicle of the Forehead Bone Relic [of the Buddha]; 10th or 11th cent. [?]; von Hinüber, 1996, §194), or the *Chakesadhātuvaṃsa* (Chronicle of the Six Hair Relics [of the Buddha, which were given to six arhats to build stūpas in faraway places]). As merchants and sailors are mentioned, this was perhaps a text used by a seafaring community. The text begins with "thus have I heard." Therefore, it should be classified as an apocryphal *suttanta* (discourse) rather than a *vaṃsa* "chronicle" in spite of the title (von Hinüber, 1996, §195; Das, 1994).

Similarly, the *Hatthavanagallavihāravaṃsa* (Chronicle of the Hattavanagalla Monastery; Snh. Attanagalu; in the village Hunupola, c. 30 km east of Colombo), composed about 1260 and concerning the history of a monastery, holds an intermediate position between chronicle and hagiography (von Hinüber, 1996, §196ff.). It centers on the story of King Sirisaṅghabodhi's (247–249 [307–309] CE) self-sacrifice, after his abdication, at the spot where the monastery was built. There are two Sinhalese adaptations of this text, which is proof of its popularity (Godakumbura, 1955, 121).

Finally, one *vaṃsa* is directed toward the future. The *Anāgatavaṃsa* (Chronicle of What Has Not Yet Arrived), of varying length in different recensions, describes in about 150 verses the events that will happen when Metteyya (Skt. Maitreya), the future Buddha, will be reborn on earth (von Hinüber, 1966, §200).

The latest Pali chronicle is the *Saṅgītivaṃsa* (Chronicle of the Councils) completed by Vimaladhamma, who later received the title Vanaratana ("Jewel of the Forest"), in Siam in 1789, at the end of the ninth council (von Hinüber, 1996, §199). The text, written in a mixture of prose and verse, covers in nine *paricchedas* much more than the history of the nine councils of the Siamese Theravāda tradition as the title suggests.

Sections 1 and 2 recall the usual seven councils of the Theravāda tradition beginning with that in Rājagaha (1), Vesāli (2), and Pāṭaliputta (3) in India, then continuing with the councils held in Ceylon and the establishing of Buddhism in Ceylon by Mahinda. The first council on the island is the recitation of the sacred texts at the site of the Thūpārāma in Anurādhapura (4). Next come the important events of the writing down of the Tipiṭaka at the Ālokavihāra (or Aluvihāra) in Mātale (5), the creation of the new Aṭṭhakathā by Buddhaghosa at the Mahāvihāra in Anurādhapura (6), and the reforms by Parakkamabāhu I, when a new set of subcommentaries was written (7). Sections 3 and 4 of the *Saṅgītivaṃsa* turn to the construction of the major stūpas after the introduction of Buddhism to Ceylon. Next, the transfer of Buddhism from the island to Southeast Asia, particularly northern Thailand (Lānnā), is retold in sections 5 and 6. The text describes the beginnings starting from the foundation of the city of Haripuñjaya (present-day Lamphun) in the north and including the eighth council held under King Tiloka (or Tilaka; 1442–1487) in Chiang Mai in 1477/1478. Sections 7 and 8 are devoted to the events of the Ayutthaya and Bangkok (Rattanakosin) periods, respectively, including the ninth council held after the destruction of the old Siamese capital Ayutthaya by the Burmese in 1767 and the restitution of the Buddhist canon during the first reign of the Cakri dynasty at Rattanakosin under Rāma I (1782–1809) in 1788/1789 (Flood, 1990, vol. I, 152–164; vol. II, 78ff.). Section 9 describes the eventual disappearance of Buddhism in the future.

One of the major sources exploited in the *Saṅgītivaṃsa* is the *Jinakālamālī* (or sometimes *Jinakālamālinī* [*pakaraṇa*]; The Wreath of the Time of the Jina; usually translated as Epochs of the Conqueror) by an author known as Ratanapañña (1473 [?]–later than 1527; it is not clear whether Ratanapañña is a personal name or a title), who lived in the Vat Pā Deeṅ (Redwood Grove Monastery) in the vicinity of Chiang Mai. The original version can be dated to 1516/1517, which Ratanapañña enlarged in 1527. The text briefly dwells on the early history of Buddhism in India and Sri Lanka before concentrating on the events in Lānna (northern Thailand), particularly in the Chiang Mai and Chiang Rai areas. There seems to be a gap in all manuscripts, because the text covering the events between 1455 and 1476 – the crucial years of the eighth council under King Tiloka –

is lost. Curiously enough, no manuscript of the *Jinakālamālī* has been found in northern Thailand (von Hinüber, 1996, §428).

An earlier chronicle with a more limited scope and originally written in Thai is the *Cāmadevīvaṃsa* (The Chronicle of Queen Cāmā; Queen Cāmā is considered to have been the first ruler of Haripuñjaya [Lamphun]during the 9th cent.). The anonymous author devotes more than half of the 15 sections (*pariccheda*) of his work to Queen Cāmā, paying little attention to the earlier history of Buddhism. The author's major concern is the origin of relics enshrined in Haripuñjaya (von Hinüber, 1996, §426; trans. in Swearer & Premchit, 1998).

In addition, there is a number of smaller and still more specialized chronicles either composed originally in Pali or translated from Thai into Pali as in the case of the *Cāmadevīvaṃsa* by Mahāthera Bodhiraṃsi. They deal with the history of images and relics, drawing their material largely from the *Jinakālamālī*. Outside Thailand these texts are hardly known and little studied so far (von Hinüber, 1996, §427).

Three chronicles stand apart, because they pay particular attention to the tradition of Theravāda literature, both canonical and noncanonical, or are totally devoted to this aspect of the history of Buddhism.

1. The *Saddhammasaṅgaha* (Compendium of the Good Doctrine) by Dhammakitti, who spent some time in Ceylon, before writing this chronicle, most likely in Ayutthaya in central Siam (Thailand). The ninth of 11 chapters lists the Theravāda literary works known to the author. As the most recent title quoted by Dhammakitti was composed during the 13th century, a date for the *Saddhammasaṅgaha* approximately during the 14th century seems to be likely (von Hinüber, 1996, §4). Moreover, there are accounts of the first four councils, of the writing down of the *Tipiṭaka*, and of the reign of Duṭṭhagāmaṇī Abhaya. The text ends with the compilation of the subcommentaries during the reign of Parakkamabāhu I.

2. The *Gandhavaṃsa* (Chronicle of Books) by Nandapañña, who might have lived in the 17th century, concentrates on texts and authors. It was, particularly during the period immediately after its discovery by the Russian Indologist I.P. Minaev (1840–1890) near Prome (Pyay) in Burma on Jan 17, 1886, an important source on Theravāda literature at the beginning of Pali studies (von Hinüber, 1996, §4).

3. The *Sāsanavaṃsappadīpikā* (Light among the Chronicles of the Teaching; mostly quoted under the abbreviated title *Sāsanavaṃsa*) was compiled from sources written in Burmese and translated into Pali by Paññāsāmi in Burma in 1861 in order to remove a linguistic barrier and to grant Buddhists of countries other than Burma easy access to the text. The same reason led much earlier to the translation of the Sinhala *aṭṭhakathā* and the compilation of a "new" *aṭṭhakathā* at the time of Buddhaghosa. Although the complete history of Buddhism from its beginnings is retold, more than half of the *Sāsanavaṃsa* is devoted exclusively to Buddhism and its history in Burma.

In all Theravāda countries, there are, moreover, numerous chronicles composed in different vernacular languages. The major chronicles in Sinhala are the *Nikāyasaṃgrahaya* (Compendium of the School [i.e. Theravāda]) composed in the late 14th century by Jayabāhu Devarakkhita (Fernando & Gunawardhana, 1908), the *Rājaratnākaraya* (Ocean of Kings) written in the mid-16th century, or the *Rājāvaliya* (Gunasekera, 1900; Suraweer, 2000) and others (Godakumbura, 1955, 122–134).

A particularly rich "historical" literature is preserved in Southeast Asia. These chronicles are mostly concerned with political history including information on events in the Buddhist saṅgha. The *Hmannān maha yazawintawkyī* (Bur. *Mhannan mahārājavaṅ-tó-krī*; Glass-Palace Chronicle) was compiled by order of the Burmese king Bagyidaw (1784–1846; r. 1819–1837) in 1829. This voluminous compendium on political and ecclesiastical history aims at providing all information that can be gathered from inscriptions and older chronicles. The introduction to the English translation gives a useful survey of earlier Burmese chronicles including the *thamaing*s (Bur. *samuiṅ*; histories of a pagoda [stūpa]), which also contain the local history of monasteries or towns (Pe Maung Tin & Luce, 1923).

In Thailand, there are basically two different, but not very clearly defined types of chronicles, the *phonsāvadān* (*baṅśāvatāra*; lineage, story of a dynasty), mainly dealing with rulers, and the *tamnān* (*tāṃnān*; story, legend), devoted to local and Buddhist history (Wyatt, 1976; Penth, 1977) – thus corresponding to the Burmese *yazawin* (*rājavaṅsa*) and *thamaing* (*samuiṅ:*), respectively. A voluminous edition of both kinds of chronicles began to appear in Bangkok in 1996 to mark the 50th anniversary of the coronation of the present king of Thailand Rama IX or Bhumibol Adulyadej (b. 1927; r. 1946–)

in the series Praḥjum baṅśā
kāñcanābhiṣek (Collection of Chro
[in Honor of] the Golden [Jubilee o
tion), planned in 30 volumes.

Historiography: China

Chinese Buddhist historiography was profoundly influenced by the rich indigenous tradition of secular historical writing. Accurate records kept by officially appointed historians date back to approximately 2,500 years ago, to the period preceding the unification of the empire under the Qin (秦). In fact, the earliest testimonies of this practice can be found in oracle bone inscriptions, which represent the earliest form of writing in China. These documents, predominantly religious in character and extremely concise, often contain the three key elements of personages, time, and a basic narrative structure.

These features are developed with great sophistication in the oldest surviving histories proper: the *Shujing* (書經; Book of Documents, the earliest strata of which date to the early Zhou [周] dynasty), the *Chunqiu* (春秋; Spring and Autumn Annals, covering the period 722 to 481 BCE, traditionally considered to have been edited by Confucius), the *Zuo Zhuan* (左傳; a commentary on the former work), as well as the *Guoyu* (國語; Discourses of the States), which collects the sayings of rulers and other prominent individuals from roughly the same period. Later, between the 3rd and 1st century BCE, the *Zhanguo* (戰國策; Intrigues of the Warring States) recorded the strategies used by the competing kingdoms during the turbulent period leading up to the Qin unification. During the Former Han dynasty (206 BCE–9 CE), Sima Qian (司馬遷; 145 or 135 BCE–86 BCE), widely regarded as the father of Chinese historiography, wrote his masterpiece, the *Shiji* (史記; Records of the Grand Historian), whose format was later adopted, with only minor modifications, in the compilation of official dynastic histories (*zhengshi* [正史]) of subsequent dynasties.

This sophisticated native historiographical tradition was the rich soil on which Buddhist historiography later grew. Authors of the great works of Buddhist historiography worked in the vast majority of cases as ordained monks. However, prior to entering the saṅgha, they would have received traditional Confucian education, an arduous process of training that involved mastering a vast body of texts, including the main works of secular historiography. (For an overview of the non-Buddhist learning of monks in the early period, see Cao, 1994, and the discussions in Zürcher, 1959.)

While for the Chinese Buddhist historians their expertise in secular mainstream literature was a matter of course, they frequently used it programmatically for the purpose of proselytizing among the educated public. Further, especially during the religion's first few centuries in China, its followers faced recurrent attacks against their theory and practice from hostile elements at court, which at times led to anti-Buddhist persecutions. In this environment of fierce contestation Buddhists found themselves having to constantly reassert their claims to authority, which they did, among other means, by refining and redefining their own historical self-understanding and its public presentation (for one discussion of a "Buddho-Daoist conflict," see Zürcher, 1959, ch. 6).

Finally, the development of Chinese Buddhist historiography was closely linked to the formation of the Chinese Buddhist canon: at stake was the problem of scriptural authenticity. When Buddhism first reached China, texts in exotic Indic languages transmitted orally or in written form would naturally be seen as imbued with an aura of authenticity, and thus with power. From then on, the concern with authenticity was central to the tradition. Buddhist historians, especially Vinaya specialists – who, as pointed out by Cao Shibang (1999), played a crucial role in the formation of Buddhist historiography in China – took up the herculean task of safeguarding against intrusions into the canon of texts perceived to be of questionable authorship, or as plain forgeries. The scriptural catalogues they wrote, an important branch of Chinese Buddhist historiography, combined the function of inventorying the ever growing numbers of translations with the more politically charged task of establishing the authenticity of scriptures.

Periodization

The history of Chinese Buddhist historiography is long and complex, which makes difficult any attempt at periodization. For the purposes of this

entry, one may divide Chinese Buddhist historiography into five periods: (1) from the Eastern Han (25–220 CE) to the end of the Six Dynasties period (220–589 CE); (2) the Sui (581–618 CE), the Tang (618–907 CE) and the Five Dynasties (907–979 CE); (3) the Song (960–1279); (4) the Yuan 1279–1368), the Ming (1368–1644) and the Qing (1644–1911); and (5) the modern period (1912-present).

First Period

The first period marks the beginning of Chinese Buddhist historiography proper in the 4th century. Among the Buddhist historians of the first period, five major figures deserve special mention as founders of a great historiographical tradition.

The first is the scholar-monk Dao'an (道安, 312–385), author of the earliest comprehensive scriptural catalogue, the *Zongli Zhongjing Mulu* (綜理眾經目錄; Comprehensive Catalogue of Scriptures), also known as *Dao'anlu* (道安錄; Dao'an's Catalogue), a record of translations of Indic texts produced by the 4th century. This work, though no longer extant in its original form, was later largely incorporated into the first extant catalogue, the *Chu sanzang jiji* (出三藏記集, T. 2145; Collected Notes on the Production of the Tripites) compiled by Sengyou (僧祐) by 515 CE, and on this basis has been reconstructed by Hayashiya Tomojirō (1941, 387–428). Dao'an's work initiated the great tradition of the scriptural catalogue that developed down to the Northern Song (960–1127), when large-scale Buddhist translation projects were still being carried out (see Chen Shiqiang, 1992, 15–28; Chen Yuan, 2002, 1–3). It also set a precedent of using catalogues to safeguard the "authenticity" of translations by labeling select items either as suspicious (*yi* [疑]) or as forgeries (*wei* [偽]; Link, 1960; Tokuno, 1990).

After Dao'an, Sengyou, a Vinaya master (*lüshi* [律師]) like most other Chinese Buddhist historians, may be seen as the founding father of full-fledged Chinese Buddhist historiography. A prolific writer, in addition to his above-mentioned catalogue, he also compiled historical works such as the *Shijia pu* (釋迦譜; Genealogy of the Śākya Clan; T. 2040; Durt, 2006), the *Hongming ji* (弘明集; Collection on the Propagation and Clarification [of Buddhism]; T. 2010; Makita, 1973–1975; Schmidt-Glintzer, 1976; Li, 2005), the *Shijie ji* (世界記; Records of the World), the *Sapoduo bu xiangcheng zhuan* (薩婆多部相承傳; Genealogical Biographies of the Sarvāstivāda School), the *Fayuan ji* (法苑集; Collected Essays of the Dharma Garden), and the *Faji zaji ming* (法集雜記銘; Diverse Inscriptions from Buddhist Collections). All but the first two are lost. Of the two extant, the *Hongming ji* is perhaps the more important work, containing precious material for the study of early medieval Chinese Buddhism. It comprises 185 essays including pro-Buddhist apologetic writings as well as works of anti-Buddhist polemic, dating from the Eastern Han to the Tianjian era (天監, 502–519 CE) of the Liang dynasty. These works reflect such themes as the hostility of Confucian and Daoist circles towards Buddhism (Chen Yuan, 2002, 37–39; Chen Shiqiang, 1992, 1079–1089); debates concerning the postmortem fate of the consciousness or "spirit" (Liebenthal, 1952; Radich, 2014), and the struggle for independence of the Buddhist community from secular authority. Some of the more recognizable essays in the collection include the *Mouzi lihuo lun* (牟子理惑論; Mouzi's disquisition on Settling Doubts; see Pelliot, 1920; Keenan, 1994), as well as Huiyuan's (慧遠; 334–416 CE) *Shamen bujing wangzhe lun* (沙門不敬王者論; On Why Monks Should Not Bow Down Before Kings; Hurvitz, 1957) and *Da huan xuan shu* (答桓玄書; A Response to Huan Xuan; Li, 2013).

Another genre to emerge in the early period is the travel record. The earliest surviving example of this genre, the *Foguo ji* (佛國記; Record of Buddhist Kingdoms), was written by the pilgrim Faxian (法顯, 337?–422? CE), the third major figure of the early period. In 399 CE Faxian left the Chinese capital Chang'an and headed to India intent on bringing back a complete text of an Indian Vinaya. After his return in 413 CE, he left a meticulous record of his pilgrimage, equipping us with precious documents on the geographical, political and social circumstances of early 5th century Central and South Asia (Zhang 1986, 2–8; Deeg, 2005; Drège, 2013).

The fourth important Buddhist historian of this period was Sengyou's disciple and fellow Vinaya specialist, Baochang (寶唱; 466?–516? CE). His compilations include the *Mingseng zhuan* (名僧傳; Biographies of Famous Monks), the *Zongjing mulu* (眾經目錄; Catalogue of Canonical Scriptures, lost), the *Faji* (法集; Compendium of Dharma, lost), the *Xu falun* (續法論; Further Collection of Essays on Buddhism, lost), the *Biqiuni zhuan* (比丘尼傳; Biographies of Nuns, T. 2063), the *Jinglü yixiang* (經律異相; Strange Tales from the Scriptures and the Monastic Codes; T. 2121), and the *Fan fanyu* (翻梵語; Indic-Chinese Lexicon; T. 2130). For a lucid overview of Baochang's ouvre, see T. de Rauw (2005). Among Baochang's writings, the *Mingseng zhuan* stands out as the earliest collection of biographies of Chinese Buddhist monks. The text no longer survives *in extenso*, but fragments are preserved in the 13th century Japanese compilation *Meisiōdenshō* (名僧傳抄; ZZ 1523; for details, see Wright, 1954) by the monk Shūshō (宗性). The *Mingseng zhuan* was a large collection of 30 fascicles, about twice the size of the *Gaoseng zhuan* (高僧傳; Biographies of Eminent Monks) compiled slightly later by Huijiao (慧皎; 497–554 CE), a work heavily dependent on Baochang's (see below). The *Biqiuniu zhuan* (translated into English in Li, 1981, and Tsai, 1994) is important as the only premodern Chinese Buddhist work devoted to female monastics. Tradition points to Baochang as the author and 516 CE as the date of compilation, although this attribution has been challenged by modern scholars (Cao, 1995; De Rauw, 2005, 215–218). The *Jinglü yixiang* is an encyclopedic work that preserves many fragments from early translations and apocrypha not attested elsewhere (Chen Shiqiang, 1992, 745–757). The *Fan Fanyu* is the earliest Buddhist bilingual dictionary, containing some 4,700 items of Buddhist Indic terminology, mainly transcriptions (translated into English in Vira *et. al.*, 2007).

Although Baochang achieved eminence during his lifetime, for unknown reasons (but perhaps due to a power struggle between him and Huichao [慧超, 475–526 CE], another leading protagonist of the Buddhist community in the capital Jiankang), his fame soon waned and his *Biographies* were eclipsed by Huijiao's *Gaoseng zhuan*. On the basis of earlier works of his predecessors (especially that of Baochang), Huijiao, the fifth great historian of the early period, was able to compile his masterpiece at the prodigiously young age of 23. His work largely consisted in reorganizing the material already collected by Baochang and others and rendering it into elegant narratives. Some of the many studies of the *Gaoseng zhuan* include A. Wright (1954), Ji Yun (2009), and R. Shih (1968). A translation into modern Japanese is Funayama Tōru and Yoshikawa Tadao (2009–2010).

The early period also saw the emergence of the genre of miracle tale. The earliest collection of Chinese Buddhist miracle tales is the *Guanshiyin yingyan ji* (觀世音應驗記; Responsive Manifestations of Avalokiteśvara) compiled by Xie Fu (謝敷; 313–362 CE), a pious Buddhist layman. Lost at an early date, the text was partially reconstructed from memory soon thereafter. A manuscript of the text was discovered in the Shōren'in (青蓮院) Temple in Kyoto in 1943 (Dong, 2002; Makita, 1970). These narrative documents found their way into later Buddhist biographies and became one of the important sources of Chinese Buddhist historiography. As these narratives are presented as records of real events, they can be said to reflect, at least in part, a historical approach. For an overview of Buddhist miracle tales in Early Medieval China, see R.F. Campany (2012) and Zhang Zhenjun (2014).

Second Period

The second period begins in the Sui (581–618 CE), when Fei Changfang (費長房, n.d.) compiled his controversial catalogue, the *Lidai sanbao ji* (歷代三寶紀; Records of the Three-Jewels in Successive Dynasties; T. 2034). This catalogue begins with three volumes of chronological records spanning a millennium from the 10th year of King Zhuang of the Zhou Dynasty (周莊王, 687 BCE) to the 17th Year of the Kaihuang Era (開皇) of the Sui Dynasty (597 CE). Volumes 4 through 12 list translations from the 16 previous dynasties, while the last part of the catalogue consists of a roster of scriptures recommended for introduction into the canon (*ruzang lu* [入藏錄]) and a list of scriptural catalogues of the various dynasties up to the Sui (*dailu* [代錄]). The *Lidai sanbao ji* stands out for a number of reasons: it is the first work to include a *ruzang lu*; it takes account of translations from the northern parts of China, whereas earlier works, influenced by the political divide prior to the Sui unification, tended to privilege the south; it features a chronicle of Buddhist history; and it preserves valuable data on early translations. A significant flaw of Fei Changfang's work is his tendency to arbitrarily attribute many of the early anonymous translations or apocrypha to well-known translators (Chen Shiqiang, 1992, 36–43; Chen Yuan, 2002, 4–10; Huang, 2009).

The Tang period (618–907 CE), which enjoyed long periods of stability and cultural flourishing, was also a period of great development of Chinese Buddhism. Daoxuan (道宣; 596–667 CE) was the most prolific Buddhist historian of this period, as well as a patriarch of the Vinaya school (*Lüzong* [律宗]). Apart from the *Xu gaoseng zhuan* (續高僧傳; Further Biographies of Eminent Monks; T. 2060), he also compiled the *Ji gujin fo dao lunheng* (集古今佛道論衡; Collection of Critical Evaluations of Buddhism and Daoism Past and Present; T. 2104; see Assandri, 2009), the *Guang Hongming ji* (廣弘明集; Expanded Collection on the Propagation and Clarification [of Buddhism]; T. 2103), the *Shijia fangzhi* (釋迦方志; Gazetteer on the Land of the Śākya; T. 2088), the *Ji Shenzhou sanbao* *gantong lu* (集神州三寶感通錄; Assembled Records of Spiritual Resonance of the Three Jewels in China; T. 2106), the *Daoxuan lüshi gantong lu* (道宣律師感通錄; Assembled Records of Spiritual Resonance of the Vinaya Master Daoxuan; T. 2107), the *Datang Neidian Lu* (大唐内典錄; Catalogue of Buddhist Scriptures [Compiled] in the Great Tang Dynasty; T. 2149; Chen Shiqiang, 1992, 47–48). Among these works, the one most strictly historiographical in nature is the *Xu gaoseng zhuan*, which follows the format established by Huijiao's earlier work (Shinohara, 1988).

Apart from the above–mentioned compilations, other historiographical texts from the Tang bear mentioning. The 100-volume magnum opus *Fayuan zhulin* (法苑珠林; Forest of Gems in the Garden of the Dharma; T. 2122; Zhou & Su, 2003) complied in 668 CE by Daoshi (道世; *fl.* 656–668 CE), a collaborator of Daoxuan, is perhaps the greatest Chinese Buddhist encyclopaedia of all time. This enormous work houses the quotations from more than 500 Buddhist and secular literary works, including those from no longer extant early translations and apocrypha (Teiser, 1985). Another work of great importance is the *Kaiyuan Shijiao lu* (開元釋教錄; Catalogue of Buddhist Texts Compiled during the Kaiyuan Era; T. 2154) compiled by Zhisheng (智昇; 669–740 CE) in 730 CE, which later became the definitive standard list of texts of the medieval Chinese Buddhist Canon (for a discussion of Zhisheng's influence on the canon, see Fang, 2006).

This period also witnessed the production of two great travelogues written by Xuanzang (玄奘; 600/602–664 CE) and Yijing (義凈; 635–713 CE). More will be said about these works below.

Third Period

China in the Song period witnessed the peak of Buddhist historiography. This was largely due to the momentous political, economic and cultural developments of the period, in spite of a general political and military weakness. A particularly important factor was the spread of papermaking and printing, which made publications much more affordable than ever before. In this milieu, Buddhist historiography blossomed, with new genres emerging, and old forms being brought to new heights.

Meanwhile the Chan (禪) school along with Pure Land (*Jingtu* [淨土]) gradually displaced Tiantai (天台), Huayan (華嚴), Yogācāra (*weishi* [唯識]), the Vinaya schools and "esoteric" Buddhism (*mijiao* [密教]) to become the two most important schools of Chinese Buddhism. Chan followers used the *Chuandeng lu* (傳燈錄; Records of the Transmission of the Flame) and other unique forms of quasi-historical texts to create ideal images of legendary Chan patriarchs in order to establish and defend their lineage's claims to orthodoxy (Jan, 1964; Cao, 2006, 13–58, esp. 20–22, 56–58; examples of the copious English-language scholarship on this topic include Faure, 1997; McRae, 2003; Jia, 2006; Schlutter, 2008).

During this third period, we still meet great Buddhist historians such as Zanning (贊寧; 919–1001), who was a scholar-monk from the Nanshan (南山) tradition of the Vinaya school and held an important post during the Song Dynasty. In the year 982 CE he received an order to compile the *Song Gaoseng zhuan* (宋高僧傳; Song Biographies of Eminent Monks; T. 2061), a project that took six years to complete (Cao, 1999, ch. 9). Then he compiled another important work on Buddhist institutional history titled the *Dasong sengshilüe* (大宋僧史略; A Brief Account of Buddhist Saṅgha History Written in the Great Song; T. 2126). In addition, Zanning authored another 18 works, most of which are lost (Jan, 1964, 362–363; Chen, 1992, 341; Dalia, 1987; Morrison, 2010). Another major figure was Zhipan (志磐, 1220–1275; for more on Zhipan, see Jan, 1964; 1966).

Fourth Period

By 1127 northern China had been taken by the Jurchen Jin (金) armies, causing the blockage of the overland route to India. Large-scale state-sponsored Buddhist translation projects came to a halt. Although communications between China and India resumed during the Yuan (1279–1368), Ming (1368–1644), and Qing Dynasties, Indian Buddhism had by then faded out from the subcontinent. For the first time, Chinese Buddhists found themselves at the center of the Buddhist world. In the meantime, they seem to have gradually became less keen on historical writings. For example, the dominant genre for the Chan school, perhaps the most important Buddhist institution at that time, was the "recorded sayings" (*yulu* [語錄]): works of this type documented dialogues of Chan masters with their disciples, rather than the biographical records of historical figures.

Fifth Period

The last days of the Qing empire in the late 19th and early 20th century, marking the fifth and last period of Chinese Buddhist historiography, saw a paradigm shift in historical writing. Chinese Buddhist historiography was transformed into a modern academic discipline as a result of direct influence from

Japanese Buddhist scholars who adopted a western (mainly German) research paradigm after the 1868 Meiji Restoration, replacing the traditional format of biographies and annals with critical examination of archives. At first, the new generation of Chinese Buddhist scholars could only imitate the works of their Japanese counterparts, as exemplified by the two earliest histories of Chinese Buddhism written by Jiang Weiqiao (蔣維喬; 1873–1958) and Huang Chanhua (黃懺華; 1890–1977), both titled *Zhongguo fojiao shi* (中國佛教史; History of Chinese Buddhism). It bears emphasizing that for the first time in China the motivation of recording Chinese Buddhist history was, nominally at least, not religious but academic.

The pioneering efforts of the first generation of modern Chinese scholars of Buddhism prepared the ground for the much more mature scholarship of such figures as the great Tang Yongtong (湯用彤, 1893–1964). Tang received his formal training in the West, and in 1938 he published his magnum opus (Tang, 1938) which quickly became a classic in China, and later influenced the most important Western language study of early Chinese Buddhist history, E. Zürcher's *Buddhist Conquest of Chin* (1959).

The other great Chinese Buddhist historian of this period was Chen Yuan (陳垣; 1880–1971). The first draft of his *Zhongguo fojiao shiji gailun* (中國佛教史籍概論; An Overview of Chinese Buddhist Historical Works) was completed by 1942. His other important work was the *Shishi yinian lu* (釋氏疑年錄; Record of Dubious Dates of Buddhists), which remains a useful reference work for biographical materials on Chinese Buddhist monks.

Roughly contemporaneous with Chen Yuan was Hu Shi (胡適; 1892–1962), who authored pioneering studies on Chan Buddhism. Hu, who was also educated in the West and studied philosophy under the guidance of J. Dewey at Columbia, found himself engaged in a protracted debate with the great Zen popularizer D.T. Suzuki (鈴木大拙) about the historicity of Zen and the proper method for its study (Hu, 1953; Suzuki, 1953 [1978]).

But these promising beginnings were soon cut short by the 1949 establishment of the People's Republic of China. This ushered in a period of stagnation in Buddhist studies that would last until roughly 1979, when the Party began to depart from its Maoist version of a centrally planned economy. During this 30-year period, studies of the humanities, especially of religion, were all but completely subordinated to Party politics and to Marxist views on religion. Buddhism along with other religions was viewed as the opium of the masses. Not surprisingly, the main purpose of research was to critique religious phenomena within a Marxist framework (Welch, 1972). At the same time, the study of Buddhism was administratively subordinated to philosophy departments in research institutions throughout China, an arrangement that privileged the philosophical over other, more properly historical, aspects of the tradition. One of the few felicitous exceptions was Ren Jiyu (任繼愈, 1916–2009), whose Marxist interpretation of traditional Chinese Buddhist thought gained the appreciation of Mao Zedong himself, a backing that enabled Ren to establish the Institute for World Religions at the Chinese Academy of Social Sciences in 1964 (Defoort & Zinda, 2010, 5–10).

In and after the 1980s, with the relaxation of the Marxist grip over the nation, Chinese Buddhist scholars once again were able to engage in freer research. Primary sources became increasingly accessible, thanks to hundreds of new archaeological digs, the growing use of computer technology to edit, analyse, index, and disseminate research, as well as to digitalized textual archives available online. Prominent examples of the latter include the CBETA database of Buddhist texts (http://www.cbeta.org/), the massive "Scripta Sinica" database hosted by Academia Sinica (中央研究院, *Zhongyang yanjiuyuan*) in Taiwan (http://hanji.sinica.edu.tw/), and the electronic version of the enormous *Siku Quanshu* (四庫全書; Egan, 2001).

Since the early 1980s, tens of original works in the field of Chinese Buddhist history have emerged, including Lai Yonghai (2010) in 15 volumes, as well as comprehensive histories of each of the eight Chinese Buddhist schools (Du & Wei,1993; Wei, 1998; Chen Yangjiong, 2000; Pan & Wu, 2001; Zhu & Wei, 2002; Dong, 2008; Wang, 2008; Yang, 2008).

Four Main Genres of Chinese Buddhist historiography

In addition to the chronological survey above, we can also view the field thematically. In traditional Chinese Buddhist historiographical writing we can identify four dominant genres: biographies, catalogues, travelogues, and gazetteers. The four genres are discussed below.

Biographies

In standard Chinese dynastic histo
Shiji, biographies often took the
of "exemplary biographies" (*liezh*
designed to exemplify some moral p
filial conduct, and grouped together
of persons representing a particular
as upright officials (*liangli* [良吏]),

ield thematically. In traditional
historiographical writing we can
nant genres: biographies, cata-
and gazetteers. The four genres
y.

Biographies

In standard Chinese dynastic histories since the *Shiji*, biographies often took the specific form of "exemplary biographies" (*liezhuan*' [列傳]), designed to exemplify some moral pattern such as filial conduct, and grouped together into categories of persons representing a particular lifestyle, such as upright officials (*liangli* [良吏]), recluses (*yinyi* [隱逸]), or knights errant (*youxia* [游俠]). To some degree, Buddhist biographies may be seen as following the *liezhuan* model, with the main difference between them and their non-Buddhist counterparts being their exclusive focus on followers of Buddhism. A lucid study of this genre in provided by J. Kieschnick (1997).

The previously-mentioned *Gaoseng zhuan* comprises "main biographies" (*zhengzhuan* [正傳]) of 257 monks, as well as "ancillary biographies" (*fuzhuan* [附傳], short recordings of personages not covered in the former category) of 262 monks, nine lay Buddhists, two nuns, and one Daoist, from the Eastern Han to the early Liang period (Ji, 2009, 122–129). Unlike Baochang's *Mingseng zhuan*, which groups its subjects into two classes, Huijiao's *Biographies* divides them into ten categories (*ke* [科]): translators (*yijing* [譯經]); exegetes (*yijie* [義解]); divine wonders (*shenyi* [神異], or thaumaturges); practitioners of meditation (*xichan* [習禪]); elucidators of regulations (*minglü* [明律]); those who sacrificed themselves (*wangshen* [亡身], i.e. those who sacrificed their bodies to feed animals as a means of spiritual self-advancement); chanters of scripture (*songjing* [誦經]), benefactors (*xingfu* [興福], or sponsors of Buddhist projects); hymnodists (*jingshi* [經師]); and proselytizers (*changdao* [唱導]). To each category there is attached a discussion (*lun* [論]) and a poem of praise (*zan* [贊]; Kieschnick, 1997, 8–10; Chen, 2002, 17–21; Ji, 2009, 117–122).

Huijiao's masterpiece set a model for future generations, and directly inspired subsequent collections such as the *Xu gaoseng zhuan* and the *Song gaoseng zhuan*. Their authors, Daoxuan and Zanning respectively, only made minor adjustments to Huijiao's ten categories format. For example, Daoxuan combined hymnodists and proselytizers into one category, changed the names of three categories, and added a new category of "Dharma protectors" (*hufa* [護法]) for monks who defended Buddhism from opponents at court and from hostile Daoists (Kieschnick, 1997, 8–9).

These three biographical collections, together with the *Bu xu gaoseng zhuan* (補續高僧傳; Supplement to the Continued Biographies of Eminent Monks, X. 1524,) from the late Ming and the *Xin xu gaoseng zhuan Siji* (新續高僧傳四集; New Continued Biographies of Eminent Monks in Four Volumes) compiled in the late Qing and early Republican periods (Yu, 1967) are major sources for the study of Chinese Buddhist historiography (Chen Yuan, 1992, 317–352, 364–374).

The compilations listed above were designed not merely to record historical facts, but to set up ideal models for members of the Buddhist community to follow, as well as to make new converts. It is thus not surprising to find them saturated with religio-poetic imagination: deeds supposed to have been performed by the Buddha or by his direct disciples reappear in novel garb, mingled with the elements of the medieval Chinese socio-cultural context, miracle stories are inserted into larger biographies to demonstrate the divine powers of Buddhist figures (Ji, 2009, 279–322). The genre of Chinese Buddhist biography, though not simply pseudo-history, does function as more than history (Shinohara, 1994; Kieschnick, 2011).

Catalogues

Catalogues, or *jinglu* (經錄), generally recorded all the minute details of the translation activities pertaining to a Buddhist scripture, including the titles of the text, the name(s) of the translator(s), the number of scrolls, the time(s) and place(s) of translation; whether the text is extant or not, expanded or abridged; its authenticity; and so on. Over 70 scriptural catalogues were produced in the Chinese Buddhist tradition, the majority of which date from the period up to the Northern Song. Among them, some recorded only the works of a particular translator (譯人錄; *yirenlu*), those from a particular monastery (寺錄; *silu*), or those from a specific dynasty (代錄; *dailu*), while some focused on scriptures to be included in the canon (*ruzanglu*). Overall, the catalogues vividly reflect the historical circulation of Buddhist writings in China at a particular time or place (for studies of the genre, see Hayashiya, 1941; Storch, 1995; 2014).

Sengyou's *Chu sanzang jiji* is one of the most important examples of this genre. Following in Dao'an's footsteps, Sengyou's main purpose was to record all historical information available in his day regarding Buddhist texts introduced from the Indian subcontinent, taking great care to determine the authorship of the translations (Chen Shiqiang, 1992, 15–28; Chen Yuan, 2002, 1–4), and to reject attempted infiltrations by apocryphal texts. For this purpose, in addition to the lists of titles of translations, Sengyou included in his text prefaces (*xu* [序]) to the translations documenting the circumstances of their production, as well as substantial biographies of monks involved in this work. All this material is indispensable for the study the early stages of Buddhist translation in China (Link, 1960; Ji, 2009, 234–252).

The afore-mentioned *Kaiyuan shijiaolu* by Zhisheng listed 2,278 Buddhist translations and indigenous works produced by 176 individuals between 67 and 730 CE. It can roughly be divided into two parts. The first part arranges in chronological order works from each dynasty, with brief biographies attached of the translators or authors, all of which is followed by a discussion of previous catalogues. The second part lists dubious and definitely spurious scriptures, and includes a *ruzang lu*. This catalogues' accuracy and high standards of textual criticism make it the perhaps most important catalogue in Chinese Buddhist historiography (Cao, 1999, ch. 20; Chen Yuan, 2002, 10–14; Chen Shiqiang, 1992, 74–84; Chao, 2012).

Travelogues

Chinese pilgrims played a key role in the exchanges between the Indian subcontinent and China. They were normally monks, occasionally lay persons, who journeyed west seeking the dharma (*qiufa* [求法]). Their travelogues (*youji* [遊記]) preserve the pilgrims' rich observations from their journeys, and constitute an important genre of historiographical writing in China.

The most famous text of this sort is the *Datang xiyuji* (大唐西域記; Records of the Western Regions of the Great Tang Dynasty; T. 2087) by Xuanzang. It provides a comprehensive overview of the geographical, social and religious environment of the Indian subcontinent and Central Asia in the mid-7th century. Its great value for scholarship became apparent soon after its first translation into English more than one century ago, as historians and archaeologists relied on it to in their attempts to locate important Buddhist historical sites (Beal, 1884; 1911; Ji, 2000; Chen, 1992, 1210–1219).

Yijing's (義淨; 635–713 CE) *Nanhai jigui neifa zhuan* (南海寄歸內法傳; Account of Buddhism Sent from the South Seas; T. 2125) highlights the differences in the adoption of monastic rules between Chinese and Indian Buddhists (Chen, 1992, 901–912; Wang, 1995; Takakusu, 1986). However, it is not strictly speaking a record, since it incorporates extensive material directly from the Mūlasarvāstivāda Vinaya, and thus it must be used a historical source only with great care. The same author's *Datang xiyu qiufa gaoseng zhuan* (大唐西域求法高僧傳; Biographies of Eminent Monks from the Great Tang Dynasty in Search of Dharma in the West; T. 2066) records 56 pilgrims who went to India during the early Tang Dynasty (Lahiri, 1986; Wang, 2000).

It was also during the Tang Dynasty that China became an important Buddhist center in its own right. In this context, the Chinese tradition of recording pilgrimages influenced Japanese Buddhists who travelled to sacred sites in China, such as Ennin (圓仁; 793/794–864 CE) who visited Tang China in 840 CE and wrote the *Nittō guhō junrei kōki* (入唐求法巡礼行記; Record of a Pilgrimage to China in Search of the Dharma). From this work we learn first-hand, among others, of Emperor Wuzong's anti-Buddhist persecution in the years 842–846 CE (Ono, 1989a; Reischauer, 1955).

About two centuries later, Jōjin (成尋, 1011–81) documented his journey to Song China in the *San Tendai Godai san ki* (参天台五臺山記; Account of a Pilgrimage to Mount Tiantai and Mount Wutai). For a study of this text, see C. von Verschuer, 1991.

Gazetteers

During long stretches of Chinese history, especially between the Han and Tang periods, due to political fragmentation, historical writing tended to focus on regional history. Huijiao's *Gaoseng zhuan*, for instance, gives a much fuller coverage of monks from the south than to those from the north. Even when China was united politically, its geographical variegation and territorial vastness still encouraged, as a matter of convenience, detailed studies of local traditions. Buddhist scholars too used to compile collections of documents on a particular region or even on a specific site, steeped in history and legend: the gazetteers.

Buddhist gazetteers, especially those from important monastic centers, contained information on the geography and architecture of the site, its cultural and political history, as well as often substantial additional biographical materials on figures associated with it. Just like a noble family or clan, a temple with an established tradition would often commission a text that could stand as a monument to its own history (Bingenheimer, 2012). Gazetteers form a vast body of literature, selected examples of which were recently digitized by the Temple Gazetteer Project at Dharma Drum Buddhist College in Taiwan, and can be accessed online at http://buddhistinformatics.ddbc.edu.tw/fosizhi.

Characteristics of Chinese I
Historiography

(1) The historiographical genres discu
lize a variety of forms or styles, many
undeniable affinities with standard f
historiography:

(a) Composite "annal-biography'
ti [紀傳體]): represented by the *Shi*
(釋門正統; True Lineage of Buddhis
Zongjian [宗鑑] in 1237) and the *Fo*
統紀; Chronicle of the Buddhas and
T. 2035; compiled by Zhipan [志
so forth. The *jizhuan ti* is perhaps
of secular historiography, exemplif
histories;

(b) Chronological style (*bianni*
represented by the *Shishi tongjian* (
prehensive Mirror of Reference of t
Lineage, ZZ 1516), the *Fozu lidai to*
通載; Comprehensive Record of the
erations of the Buddhas and Patria
Nianchang [念常, 1282–1344]), and t
(釋氏稽古略; An Outline of Histo
into the Śākya Family Lineage; T. 20

(c) General biographical style
體]): represented by the three colle
phies of Eminent Monks discussed a

(d) Classified biographical style
體]): represented by the *Biqiuni zh*
xiyu qiufa gaosengzhuan, and so fo

(e) Individual biographical style
傳類]): represented by such works
zhizhe dashi biezhuan (隋天台智
vidual Biography of the Great Mast
of the Sui; T. 2050), and the *Datang*
fashi zhuan (大唐大慈恩寺三藏

Characteristics of Chinese Buddhist Historiography

(1) The historiographical genres discussed above utilize a variety of forms or styles, many of which show undeniable affinities with standard forms of secular historiography:

(a) Composite "annal-biography" style (*jizhuan ti* [紀傳體]): represented by the *Shimen zhengtong* (釋門正統; True Lineage of Buddhism, compiled by Zongjian [宗鑑] in 1237) and the *Fozu tongji* (佛祖統紀; Chronicle of the Buddhas and the Patriarchs; T. 2035; compiled by Zhipan [志磐] in 1269), and so forth. The *jizhuan ti* is perhaps the main form of secular historiography, exemplified by dynastic histories;

(b) Chronological style (*biannianti* [編年體]): represented by the *Shishi tongjian* (釋氏通鑒; Comprehensive Mirror of Reference of the Śākya Family Lineage, ZZ 1516), the *Fozu lidai tongzai* (佛祖歷代通載; Comprehensive Record of the Successive Generations of the Buddhas and Patriarchs; T. 2036; by Nianchang [念常, 1282–1344]), and the *Shishi jigu lüe* (釋氏稽古略; An Outline of Historical Researches into the Śākya Family Lineage; T. 2037), and so forth;

(c) General biographical style (*zhuanjiti* [傳記體]): represented by the three collections of *Biographies of Eminent Monks* discussed above;

(d) Classified biographical style (*leizhuanti* [類傳體]): represented by the *Biqiuni zhuan* and *Datang xiyu qiufa gaosengzhuan*, and so forth; and

(e) Individual biographical style (*biezhuan lei* [別傳類]): represented by such works as the *Sui Tiantai zhizhe dashi biezhuan* (隋天台智者大師別傳; Individual Biography of the Great Master Tiantai Zhizhe of the Sui; T. 2050), and the *Datang daci'ensi sanzang fashi zhuan* (大唐大慈恩寺三藏法師傳; Biography of the Tripiṭaka Master of the Great Ci'en Monastery of the Great Tang Dynasty; T. 2053; translated into English in Li, 1995).

Other biographical categories include biographies of laypersons (*jushizhuan* [居士傳]), biographies of individuals reborn in the Pure Land, and so on. Nonbiographical works centered around such topics as Buddhist geography – for example, the *Shijia fangzhi* and the *Lushanji* (廬山記; Records on the Lu Mountain).

(2) The vast amount of data preserved in Chinese Buddhist historiographical works allows for easy and productive cross-referencing. Such work has recently been made much easier by the development of a series of sophisticated online tools for the study of Chinese Buddhist biographies (http://buddhistinformatics.ddbc.edu.tw/gaosenggis/), place and person names (http://authority.ddbc.edu.tw/), and gazetteers (http://buddhistinformatics.ddbc.edu.tw/fosizhi/), all of which rely on data from Chinese Buddhist historiographical works.

(3) Most Chinese Buddhist historiographical texts were compiled by or for private religious institutions or individuals without court support. Officials and historians at court responded frequently with distrust or outright hostility. This became especially true after the Middle Tang period. Ouyang Xiu (歐陽修, 1007–1072), one of the greatest Chinese historians, did not conceal his thorough disdain towards Buddhism. In revising earlier versions of both the *Jiu Tang shu* (舊唐書; Old Tang History) and the *Jiu wudai shi* (舊五代史; The Old History of the Five Dynasties), he removed almost all accounts that he considered not in line with Confucian thought, including many references to Buddhism, so that even Xuanzang did not win a place in his official history of the Tang Dynasty. In a similar vein, the *Songshu* (宋書; History of the Song Dynasty), while including biographies of Buddhist monks, placed them in the chapter on "barbarians" (夷蠻列傳; *manyi liezhuan*), a choice that reflects the official compiler's view of the religion. This view prevailed especially in the various southern courts, which saw themselves as protectors of the Han Confucianism patrimony against foreign powers in the north.

At the same time, the political and cultural upheaval in the period between the Eastern Han and the Sui dynasties temporarily eroded Confucian domination over official historiography. This resulted, for example, in the compilation of the *Shilao zhi* (釋老志; Treatise on Buddhism and Taoism), and its inclusion in the *Wei shu* (魏書; History of the Wei Dynasty) compiled in 554 CE by Wei Shou (魏收; 506–572 CE) The *Shilao zhi* serves as a brief history of Chinese Buddhism from the Yuanshou era (元狩; 122–117 BCE) of Emperor Wu of the Western Han dynasty to the Wuding era (武定; 543–550 CE) of Emperor Jing of the Eastern Wei dynasty, and records, among other matters, the main development of Buddhism, the organization of Buddhist communities, and prominent Buddhist historical figures (for English translations, see Ware, 1933; Hurvitz, 1956). The *Shilao zhi* remained, all the same, an exception. The only other work of its type is found in the *Yuan shi* (元史), the official dynastic *History of* *the Yuan*. Titled *Shilao zhuan* (釋老傳; Biographies of Buddhists and Taoists), it highlights important religious figures from the Mongol dynasty.

(4) One of the main sources for traditional Chinese Buddhist historians were commemorative writings, that is texts produced in connection with the death of a person of renown. Commemorative writings include epigraphical inscriptions (*beiwen* [碑文]), tomb tablets (*muzhi* [墓誌]), funerary orations (*jiwen* [祭文]), and eulogies (*leiwen* [誄文]; Ji, 2009, 187–198; Liu, 1995). For a convenient reference book on this issue, see Jiang Liangfu, 1959. The preoccupation with death reflects a broader Chinese concern with genealogy. Starting from as far back as the 2nd millennium BCE, genealogies of royal clans were kept and can be reconstructed from oracle-bone inscriptions and later historical records. During the Han, and especially from the Six Dynasties period onwards, genealogical records of aristocratic lineages (*shizu* [士族]) and of the comparatively subélite families known as "magnate lineages" (*haozu* [豪族]) became a recognized historical genre. Against this backdrop it makes sense that Chinese Buddhist historians would attempt to (re)construct the genealogy of the Śākya clan of the historical Buddha. Sengyou's *Shijia pu* and Daoxuan's *Shijia shipu* (釋迦氏譜; Clan Genealogy of the Śākyas; T. 2041) are typical of this form (Durt, 2006).

(5) Chinese Buddhist historians more often than not had a sectarian affiliation, which led them to approach their material selectively so as to justify the particular ideology of their own school. Furthermore the, different schools seemed to prefer particular styles of historical writing. For example, the above-mentioned official annal-biography form (*jizhuanti*) was a favorite of Tiantai historians. As an illustration, Zhipan, in his *Fozu tongji*, adapted the form of imperial annals (*benji* [本紀]) – which in its original context of official historiography recorded biographies of emperors and empress dowagers – and used it to record the lives of the Buddha and of the Tiantai patriarchs. In works such as his, where the historian acts on behalf of one sect in competition with others, other schools of Chinese Buddhism are often relegated to inferior positions. For example, Zhipan's work places Pure Land related materials in the relatively marginal section on miscellaneous essays (*zhi* [志]).

By contrast, the Chan sect preferred the chronological style. An early Chan work exemplifying this style is the *Chanlin Sengbao zhuan* (禪林僧寶傳; Biographies of Saṅgha Treasure of the Chan School; ZZ 1560,) compiled by Huihong Juefan (慧洪覺範; 1071–1128), which documents 81 Chan masters from the late Tang dynasty to the Zhenghe (政和, 1111–1118) era of the late Northern Song (Chen 1992, 393–397). This trend was continued by the *Sengbao zhengxu zhuan* (僧寶正續傳; Continued Biographies of Saṅgha Treasure), compiled by Zuxiu (祖琇) in the years 1165–1173, which documented a further 28 Chan masters from the late Northern Song to the early Southern Song periods, and later yet by the *Nan Song Yuan Ming chanlin sengbao zhuan* (南宋元明禪林僧寶傳; Biographies of the Saṅgha Treasure of the Chan School of the Southern Song, Yuan and Ming Dynasties; ZZ 1562), which documented 98 Chan masters active between the Jianyan (建炎; 1127–1130) era of the Southern Song to the Shunzhi (順治; 1644–1661) era of the Qing (Chen, 1992, 397–408).

(6) Chinese Buddhist historiography has the tendency both to rationalize legendary and fabulous elements, and simultaneously to sanctify ordinary events by imbuing them with the transcendent and the magical. In response to this, one approach we can take is to winnow out the fabulous in order to get at the robust historical fact. Another approach (Kieschnick, 1997, 1–2) is to take the fabulous elements seriously as precisely what deserves study as meaningful expressions of the religious imagination.

(7) Chinese Buddhist historiographers not only appropriated the models of official Confucian historiography, but at times actively responded to it. This can be seen for instance in their handling of the problem of political legitimacy. Legitimizing the current regime was an enduring primary concern for official Chinese historians, and involved often intricate negotiation of such concepts as mandate of heaven (*tianming* [天命]), grand unification (*da yitong* [大一統]), blood lineage (*xuetong* [血統]), and the distinction between the culturally Chinese and the "barbarians." Buddhist historiographers responded to these concerns by carefully choosing the politically charged terminology they used to refer to the regimes they supported and those they wished to mark as morally or politically suspicious. For example, Huijiao, as a loyal subject of a Southern regime, naturally saw China's Northern rulers as illegitimate (Ji, 2009, 58–59). Accordingly in his *Gaoseng zhuan* he exhibited utmost care in dealing with era name (*nianhao* [年號]), so as to reflect his political judgment. This strategy of using dating formats as a subtle yet potent form of political criticism would continue into modern times.

(8) Last, even if we take into consideration the patriarchal nature of traditional Chinese society, the

conspicuous absence of female figu
Buddhist historical records is still n
only collection of biographies of fer
monastic or lay, prior to the Qing d
Biqiuni zhuan. A millennium wou
a similar work would appear aga
Jiqing (彭際清; 1740–1796) compiled
of Virtuous Women (善女人傳). In th
of Chinese Buddhism, we find no ot
female historians.

Historiography: Thailand

Written primary sources about the history of Buddhism in premodern polities within what is today Thailand were documents generated, circulated, and archived by different local Buddhist communities and monastic schools. They were preserved in the numerous monastic libraries of the Thai kingdoms and principalities of the early modern period, the *ho tham* (edifice for the *dhamma*) or *ho trai* (edifice for the Tipiṭaka). These sources were compiled, recorded, and recopied in manuscripts from early times up to the mid-20th century in northern Thailand (a polity formerly known as Lanna) and in the Tai principalities (e.g. of the Tai Khuen and Tai Lue) but only up to the early 19th century in central Thailand (former Siam). All these documents were intended to bring new local elements to preexisting Buddhist literature and to enrich the many stories of the Buddha, *dhamma*, and saṅgha in a new temporal sequence and in lands far removed from Buddhist India. These elements are composite in nature and their complexity is nothing short of disconcerting for the modern historian: facts and fables can be presented together, at the crossroads of historical and mythical modes.

In the modern era, and especially since the early 20th century CE, religious historiography has been consistently collected, preserved, and studied by both Thai and international experts but largely outside of their original contexts, the monasteries and centers of local knowledge. These experts – laymen or monks – have unavoidably used them for different purposes, less and less religious or ritual but increasingly political or academic. The result has been the search – beyond the historical level – of an inflexible historicity quite noticeable, for instance, in modern biographies of the Buddha Gotama, in contrast to the *jātakas* (miraculous lives of the Bodhisatta) that had been compiled, enriched, and transmitted for hundreds and even thousands of years. Historicity came at the expense of mythological and religious elements that were later more fully appreciated by anthropologists and sociologists as scientific data.

In fact, a balanced understanding of the historiography of Buddhism only emerges when we take into account two factors. The first factor is that the Western concept of history did not exist at the time of our premodern primary sources, since the corresponding Thai term (*prawatisat*) was only coined during the reign of King Rama V of Siam (1868–1910) in the early years of the 20th century. The second factor is that a distinctively Buddhist notion of time was deeply imbedded in the local culture, directly inherited from circa 5th-century CE Pali commentaries such as Buddhaghosa's commentary on the *Aṅguttaranikāya*, the *Manorathapūranī* (von Hinüber, 1996, 43). According to this text, the current Buddhist era (i.e. the period during which the teachings of Buddha Gotama exist in the world) will last five thousand years, years of inexorable decline leading to the total extinction of Buddhism. The commentary says that the last millennium will be the time of the disappearance of the relics of the Buddha caused by the lack of public veneration. The complete vanishing of Buddhism was therefore prophesized, and for the Buddhist people of the region, there was a constant need to understand to what phase of this period of decline they actually belonged.

According to E.E. Evans-Pritchard (1962, 47), the characteristic feature of historicist methodology is a tendency to explain "any institution in terms of its origins, or at any rate of its antecedents." With regard to the historiography of Buddhism, *historicity* has been imposed on the biography of the Buddha as much as the history of his institution, the saṅgha. P. Skilling (2006, 19) referred to the modern invention of the historicist Buddha, the universal figure eventually revealed when all miraculous elements have been scrubbed from the original sources. This reductionist tendency imposed by Western academics and quickly adopted by local elites reframed and reified the history of Buddhism in light of privileged categories (Theravādin, canonical, classical, and cultivated) while undervaluing or excising core features of the premodern tradition as magical, superstitious, popular, or degenerate.

Nowadays the study of Thai Buddhist historiography is also done with the methods of the history of religions (mixing philology, history, anthropology, and sociology), an approach respectful of historicity and mythology, acknowledging facts as well as fictions and taking into consideration, as much

as possible, the point of view of the local Buddhist faithful and the historical conditions of transmission, interpretation, and ritual use of the texts.

Sources, Languages, and Genres

Historiographical documents were mostly written using two different scripts (Tham or Dhamma script in northern and eastern Thailand; Khom or Khmer script in central and southern Thailand), both specially designed to perfectly record the classical Indic texts (substantially all in Pali but also, in only rare instances, in Sanskrit) and all new texts composed in the different Thai/Tai languages. They were readable and easily adaptable – not to say translatable – from one to the other script and language. This remarkable linguistic unity – today less effective between Thailand and parts of Burma and southern China – led to many exchanges and facilitated the transmission of texts. Textual trading was sometimes direly needed: for instance, after the destruction of Ayutthaya by the Burmese in 1767, many Pali texts considered as part of the Tipiṭaka were copied in Khom from originals in Tham and Mon scripts in order to restore the Siamese collections (Wenk, 1968, 40).

Historical sources mentioned in this article were transmitted through manuscripts belonging to the Siamese and Lanna Pali manuscript traditions. In these traditions, it was customary to use and keep these documents alongside Pali Buddhist texts nowadays referred to as the "Theravāda canon." But it is important to underscore that in the premodern period, histories or locally composed narrative sources were not necessarily regarded as documents outside the category of Tipiṭaka, especially when they were written in Pali. At the beginning of the modern period, one of the first catalogues of manuscripts, presenting the collections of the newly founded Vajirañāṇa National Library (founded in 1905), classifies Buddhist historiographical texts in the Tamnan category. The Pali Tamnan – apparently highly regarded – is placed third in the traditional sequence of the Tipiṭaka, just after the Suttanta and before the Abhidhamma (i.e. Vinaya, Suttanta, Tamnan, and Abhidhamma; Skilling & Pakdeekham, 2004, 63–70; for the original, see website of the Chulalongkorn University Library). These Siamese catalogues (prepared at the initiative of Siamese princes) show that even at that time, perceptions of the historical status of Thai Buddhist literature as a whole did not confer a special importance to the notions of canonical or extracanonical.

All genres that we may call Buddhist historiography were classified as *vaṃsa* in Pali (a word that became *wong* and *phong* in Thai) or as *tamnan* in Thai (Wyatt, 1976, 107). *Vaṃsa* refers to lineage or tradition, whereas *tamnan* is a Thai word from Khmer (*ṭāl* and *ṭamnāl*) meaning communicate, narrate. Political or royal chronicles were known as *phongsawadan* (from Sanskrit *vaṃsāvatāra*) but only in Siam and, at a later date, in Laos. Charnvit Kasetsiri (1976) clearly defines the nature and concept of premodern Thai historiography; he divides it into two types – traditional and religious history (*tamnan*) and premodern or even modern dynastic history (*phongsawadan*). He notes the decline of the *tamnan* type from the 17th century onward and the development of *phongsawadan* from this period (coinciding with the reign of King Narai of Siam [r. 1656–1688] and the first major contact with the West). The bibliometric study of the manuscripts of the northern region, however, shows that the decline in *tamnan* was neither simultaneous nor of equal importance. Traditional stories continued to be written, or at least widely recopied and distributed, throughout 19th-century Lanna, and the *tamnan* perception of history continues to be present in the contemporary Buddhist culture of Thailand (Lagirarde, 2014).

Tamnan is a form of narrative literature, and the word only occasionally deserves to be translated as "chronicle." This is indeed a wide genre, and often original titles further specify their orientation – various prefixes and suffixes employed include *tham* (*dhamma*) *tamnan* for narratives dealing with the history of Buddhist teachings, institutions, or objects; *tamnan ṅithan* (Pal. *nidāna*) for texts dealing with mythic history; and *tamnan phuen* (or *tamnan phuen mueang*) for narratives about political or dynastic histories.

Reciters, Scribes, Chroniclers, and Chronicles

The Sri Lankan *vaṃsa* literature in Pali began to appear at an undisclosed time (13th–14th cent.[?]) in the monastic communities of the Thai world. We do not know by whom, how, and under what conditions the texts were transmitted. Starting in the 15th century, the names of some chronicle authors and the names of many sponsors and scribes as mentioned in the colophons of manuscripts become known, but we know almost nothing of the methods employed by the earliest local scholars to learn, copy, and transmit texts.

Historians face a major problem when they realize the gap between the given dates of the foundation of the first political Thai centers of power (Sukhothai in c. 1240, Chiang Mai in 1296, and Ayutthaya in 1351) and the appearance of the first Buddhist historiographical texts in the region. This gap of nearly two centuries (at least, and clearly measurable in Lanna) poses the fundamental question of what kind of Buddhist literacy was operating in that period. In the north, one of the last Mon inscriptions from Lamphun suggests that the copying of texts (and the making of manuscripts from palm leaves) was certainly well underway since the pre-Thai period when the region was inhabited by Mon speakers (this inscription LB 01, in Mon and Pali, dated 1213–1219, tells of "golden [gilded] Tipiṭakas" ordered by King Sabbhādhisiddhi of Lamphun; see Cœdès, 1925, 190–191).

D. Veidlinger (2006, 37) has argued that textual transmission in Hariphunchai and Lanna was oral and performed by reciters of scripture (using the word *bhāṇakas* in analogy to ancient Pali usage) for several hundred years before the oldest manuscripts ever found in the region (15th cent.), and that we also have evidence of textual compositions for the same early period.

The oldest *vaṃsa* manuscript ever found in Thailand is a copy of the *Buddhavaṃsa* dated 1551, kept in the library of Wat Lai Hin near Lampang and copied at Wat Pa Yuak of unknown location (von Hinüber, 2013, 124). The oldest dated Pali manuscript from Thailand – fragments of a *jātaka* – comes from the same monastery and is dated 1471 (von Hinüber, 2013, 102). Another important historical landmark is a Chiang Rai inscription (JR 6; dated 1605), which states the following:

> [in Pali] *Dhātuvaṃsam pavakkhamī*... [in Thai] I am going to tell the *tamnan* of the relic that was left here... the Buddha came by air in Mueang Yuan [Lanna], sat on a rock, went for alms, made a prediction. (Prasert na Nagara *et al.*, 1991, 14–16)

This inscription – which confirms the use of the Thai word *tamnan* to gloss Pali *vaṃsa* – appears like a summary of the *Tamnan Doi Tung* (Penth, 1993) and an abstract of many other *tamnan* related to the foundation of reliquaries and the legendary travels of the Buddha in Lanna (Nakharit, 2002).

This kind of narrative celebrating relics (bodily relics and footprints left by the Buddha) falls naturally within the tradition of mainstream Buddhism and the forms of devotion known in continental Southeast Asia. H. Penth (1993, 6) suggests that many themes and texts could have a Burmese or Shan origin. The most common historical text of Lanna – the most circulated in manuscript form – remains the story of the Shwe Dagon Pagoda (located in modern Yangon, Burma) and is known under the title *Tamnan Takong*. It should also be noted that the tradition of Buddha footprints in reference to the hermit Saccabandha and the hill bearing this name seems to be connected with ancient Burmese sites (Shwesettaw near modern Minbu); the *Buddha Tamnan* specifically cites the mountain called Saccabandha and regards it as the place where the four buddhas have left their footprint and where the future buddha will do the same (Lagirarde, 2014, inv. no. 003_018).

The situation is very different between the north and northeast (the Tham script tradition) and the central plain and the south (the Khom script tradition). In the north, chroniclers were obviously affiliated with different monastic lineages, and competition among these lineages led to the writing of histories with different perspectives on Buddhist history. In Siam, the Buddhist historiographical tradition – often produced by high-ranking officials, court members, and royalty – was seen as a very appropriate tool to address dynastic, domestic, and regional issues (Reynolds, 2006).

Pali Chronicles and Histories of the Buddha(s)

In the sense given in Southeast Asia, a *vaṃsa* narrates the origin, lineage, or genealogy of a particular figure, group of figures, site, object, or event. They include chronicles of kings; past or future buddhas; the saṅgha; and individual monastic lineages, monasteries, or monks. They also comprise narratives concerning the history of shrines, images, relics, and sacred sites. Most Pali and vernacular historical texts from Thailand have not been fully studied, critically edited, or published, and it is quite conceivable that new texts await discovery.

In premodern Thailand, the Pali *vaṃsa* tradition comprises first of all copies of exogenous and transregional treatises written in local scripts.

It is also represented by many texts
around local themes. Some of these

hailand, the Pali *vaṃsa* tradi-
t of all copies of exogenous
eatises written in local scripts.

It is also represented by many texts written locally around local themes. Some of these were originally composed in Pali, while others were likely initially compiled in Mon or a Tai language and then translated and reworked in a Pali version (e.g. the famous *Cāmadevīvaṃsa*; see below). The attribution of some Pali *vaṃsa* texts still remains uncertain or controversial: this is the case, for example, with the *Sadhammasaṅgaha*, which traces the history of Buddhist councils and the history of Buddhist literature until the 12th century and ends with an enumeration of the benefits gained with particular pious actions (a genre that greatly developed later in the vernacular literature called *anisong* [Pal. *ānisaṃsa*; see Law, 1941). If the *Sadhammasaṅgaha* does not recall any Thai context, however, its colophon seems to mention that the author has written the book in Ayutthaya, the capital of Siam, possibly around the year 1400 (Penth, 1977).

The classical chronicles from Sri Lanka – the *Mahāvaṃsa*, the *Dīpavaṃsa*, the *Dāṭhavaṃsa*, and so forth (von Hinüber, 1996, § 182–188, 193) – have been known since an early time, then glossed and translated in full or abridged versions. Partly on the basis of such "classical" *vaṃsa* models, new titles appeared, for example the *Vaṃsamālinī* (see von Hinüber, 1996, § 190), possibly composed in Chiang Mai in the 15th or 16th century and borrowing most of its content from the *Mahāvaṃsa*. This text depicts some episodes of the deaths of the main disciples of the Buddha that might have inspired another local genre, the stories of the *nibbānas* of the 80 principle disciples of the Buddha Gotama (*mahāsavakas*; important listeners [i.e. followers]), of which we know many versions both in Pali and in the vernacular. The *Mahāvaṃsa* itself has been "extended" locally either in Burma or in Thailand under the title "(Extended or Cambodian) *Mahāvaṃsa*" (von Hinüber, 1996, § 189).

Genre boundaries are loosely fixed; therefore, many historical texts may be classified as belonging in part to other families, for example *parittas* (protective recitations), *jātaka* tales, hagiographies, and prophecies. This is the case, for instance, with the *Pañcabuddhabyākaraṇa* (Martini, 1969; von Hinüber, 1996, § 429), which is both a *jātaka* and the story of the visit to Thung Yang, in Uttaradit province, by the five buddhas of this era, and the *Uppātasanti* (a *paritta* text written in Chiang Mai in the 16th cent. that contains historiographic elements). Locally composed Pali narratives of the abovementioned *nibbānas* of the 80 disciples were an opportunity to gather together historical material in works like the *Mahākaccāyanatheranibbāna* and *Mahākassapatheranibbāna* (Lagirarde, 2006). "Chronicles of the future," such as the *Anāgatavaṃsa* (see von Hinüber, 1996, § 200; Norman, 2006), which tells of the coming future buddha Metteyya, have been highly popular in Southeast Asia, and it is not impossible that it was composed locally, like the *Dasabodhisatta uddesa* (Martini, 1936; von Hinüber, 1996, § 201) on the ten (future) *bodhisattas*.

Because of all the uncertainties related to the disappearance of the manuscript collections after the fall of Ayutthaya in 1767, it seems that the Pali school of Chiang Mai was predominant in the development of *vaṃsas* – or at least that the number of ancient texts and old copies is better represented in that region than anywhere else in Thailand (because the Siamese manuscripts did disappear, because they have not yet been identified, or because there never were such texts in the first place). This characteristic is even more striking in the vernacular literature: *tamnans* from Lanna have been rewritten and copied and amount to tens of thousands of surviving manuscripts.

The *Cāmadevīvaṃsa* (for the Siamese edition and translation of ch. 7, see Cœdès, 1925; von Hinüber, 1996, § 426; for a translation of the Thai version, see Swearer & Sommai, 1998) and the *Sihiṅganidāna* (for the Siamese edition and translation, see Notton, 1933b; von Hinüber, 1996, § 427) are early 15th-century works compiled by Mahāthera Bodhiraṃsi. The *Cāmadevīvaṃsa* gives a good example of composite genre since it tells the legendary story of Queen Cāmadevī and the story of the establishment of the religion and relics in the former kingdom of Hariphunchai (Pal. Haripuñjaya, modern Lamphun). The *Sihiṅganidāna* tells the history of the Phra Singh Buddha image. In the same period, Brahmarājapañña composed the *Ratanabimbavaṃsavaṇṇanā* (Explanation of the History of the Jewel Image; for the Siamese edition and translation, see Notton, 1933a; von Hinüber, 1996, § 427), the story of the "Emerald Buddha," nowadays sumptuary kept in Bangkok.

The *Jinakālamālī* (see von Hinüber, 1996, § 428) – compiled in Chiang Mai in 1516 or 1517 – is probably the best-studied chronicle: it has been translated into French (Cœdès, 1925) and into English (Jayawickrama, 1968) and extensively indexed and annotated (Penth, 1994). It is considered a general history of Buddhism, starting with early origins (from the *cittuppāda* or rise of thought to become a buddha and the story of the Bodhisatta to the story of the Buddha, the councils, and the development of the teaching in Sri Lanka) and becoming very detailed about the Thai period, up to the early 16th century, when this chronicle ends. The *Jinakālamālī* bears the point of view of its author, the monk Ratanapañña, who belonged to the Wat Pa Daeng ("Redwood Grove Monastery") school of Chiang Mai, the second Sinhala order established in the region. It may be contrasted with earlier histories compiled in the vernacular that represent the perspective of the first Sinhala-inspired order (see below). No copies in the local Tham script have survived, and the text is known from a Siamese manuscript in Khom script dated 1788 (Penth, 1994, 335).

The *Paṭhamasambodhi* (see von Hinüber, 1996, § 391; Kieffer-Pülz, 2010) is a unique compilation of episodes from the life of the Buddha Gotama. This text apparently developed between Lanna and Siam over a period of four centuries. Its oldest copies date from 1574 and have been found in Wat Lai Hin, near Lampang (von Hinüber, 2013, 142), while the last episodes appear only in the 1845 recension of Prince Paramānujit of Siam (or Suvaṇṇaraṃsi, his name as a *bhikkhu*), a work commissioned by King Rama III (r. 1824–1851). It forms a continuous narrative that begins with the marriage of the parents of the Buddha and ends with the story of the decline of the religion and the disappearance of the relics (*dhatu antaradhāna*). The English biography of the Buddha published in 1871 by H. Alabaster as *The Wheel of the Law* was taken from the *Paṭhamasambodhi*, and most of the murals depicting the life of Buddha in the monastic buildings in Thailand, Laos, and Cambodia are directly inspired by this text.

The *Saṅgīti[ya]vaṃsa* (for a translation of ch. 7, see Cœdès, 1914; von Hinüber, 1996, § 199), which is directly inspired by the *Mahāvaṃsa* and the *Jinakālamālī*, is the first text composed in the Ratanakosin era of Siam (1782 to present). It is dated 1789 and gives a full account of the history of Buddhism, from its beginning in India, through its developments in Sri Lanka and Lanna, up to the Buddhist council patronized by King Rama I (r. 1782–1809) in the new capital, Bangkok. The same author, Phra Vanarata, also wrote the *Mahāyuddhakāravaṃsa*, a Mon chronicle, and the *Cūlāyuddhakāravaṃsa*, an Ayutthaya chronicle.

Two *tamnans* in Pali, both about Buddha images, were composed or recomposed by King Rama IV (r. 1851–1868) in 1854 and 1857 (the *Gāthā Tamnan Phra Kaeo Morakot* and the *Gāthā Tamnan Phra Sāyana*; Nun Vimuttiya, 2009, 101–102).

Vernacular Buddhist Historiography: Lanna and Siam

The majority of historiographical texts from premodern Thailand were compiled in vernacular languages (Siamese, Yuan, Khuen, and Lue). The history of literature and the history of books have known different developments between the north (Lanna) and the central plain (Siam). Charnvit Kasetsiri (1976, 6–7) claims that traditional historiography vanished in the 18th century in Siam, whereas *tamnan* history survived up to the 20th century in Lanna. While very little is known about Siamese *tamnans*, Lanna *tamnans* are now much more studied and accessible. Udom Roongruangsri (1999) provides a list of 206 titles known in Lanna in the *Encyclopedia of Thai Culture* and an abstract for many of them. Some texts began to be known to the outside world in the early 20th century thanks to the pioneering work and translations of G. Cœdès (1914; 1925) and C. Notton (1926; 1930; 1932; 1933). The most accurate and historical *tamnans*, such as the *Tamnan Chiang Mai* (The Chiang Mai Chronicle), have been widely published, translated, and studied in all their versions, including Burmese (the *Zimme Yazawin*). However numerous important *tamnans*, including some of those mentioned here, still remain unpublished and even uncatalogued, although manuscripts of a large number of such texts have recently been made accessible via a database posted on the website of the École française d'Extrême-Orient (www.efeo.fr/lanna_manuscripts/); many texts in their Tham Lao version (almost identical with Lanna versions) are also available via the Digital Library of Lao Manuscripts (http://www.laomanuscripts.net).

Most *tamnans* cover a time defined by the eras of different buddhas of the past and the era of the Buddha, which lasts 5,000 years: they extend it with a history of the future buddha, centered on the coming of Metteyya, the last of the five buddhas of our eon, the *bhaddakappa* (auspicious eon). Yet, beyond this immensely long time, the references to other *bodhisattas* and buddhas in future eons are also given. The temporal and spatial dimensions within this historiography both expand and contract, cleverly mixing mythic, human geographic, and chronological scales. Moreover, a few texts deal with the history of the origins of the world during the absence of a buddha, like the *Paṭhamamūlamūlī* translated by A.R. Peltier (1991) as *The Origin of the World in the Lan Na Tradition* and the unpublished *Pathomkap* (First Eon).

on).

The first chronicle from Thailand intended to be a general history of the religion of the Buddha – from its beginnings (even before the era of Gotama) up to events in Chiang Mai in the 15th century – is the *Tamnan Mūlasāsanā*. It was started by Buddhañāṇa, the abbot of Wat Suan Dok in Chiang Mai, around 1425. It is a long text, between 300 and 400 folios in palm-leaf manuscript form, reflecting on the Wat Suan Dok school (Fai Suan), the first local Sinhala-inspired order founded by Sumāna Bhikkhu in the late 14th century.

Other texts bearing the generic title *Mūlasāsanā* (Foundations of the [Buddha's] Teaching) belong to the second school of Sinhala-trained *bhikkhus* of the Wat Pa Daeng school (Fai Daeng); although undated, they are probably contemporary to the *Jinakālamālī*, written 90 years after the *Mūlasāsanā*, and seem to be a direct response or reaction to the original *Mūlasāsanā*. In the vernacular, we find many versions of this text mentioning Wat Pa Daeng (*Tamnan Mūlasāsanā Wat Pa Daeng* in Lanna; for the Chiang Tung version, see Sao Sāimöng Mangrāi, 1981), some of them clearly centered on the personality of the second reformer of the Sinhala *bhikkhus*, the Thai monk reordained in Sri Lanka Dhammagambhīra or Ñāṇagambhīra (*Mūlasāsanā Ñāṇagambhīra*; *Ghambhīrabhikkhu* [see Bizot, 1993, 38–49]).

Stories about reliquaries (*that*; Pal. *dhātu*) and footprints of the Buddha (*buddhapāda*) are among the most popular *tamnans* of the Thai world (Lagirarde, 2012). They have been put together into manuscripts collections with interchangeable titles like *Tamnan Phra That Phra Bat* (Stories of the Reliquaries and Footprints of the Buddha) and *Phuttha Tamnan Phra Chao Liap Lok* (The Story of the Buddha's Journeys around the World), exposing the multiple stories of the Buddha travels outside of India to the mainland of Southeast Asia and Greater Lanna in particular. The stories tell how the Buddha traveled through the air, accompanied by his disciples and often by King Asoka. Usually the Buddha discovers a site and predicts its future role in the development of his religion, leaving a relic (usually of his hair) and/or a footprint and announcing that his bodily relics will be kept in the premises after his *parinibbāna*. The list of the texts built on this scheme is quite long.

Most famous *that* (reliquary) stories are the *Tamnan Phra That Hariphunchai* (History of the Holy Relic at Haripunchai) and the *Tamnan Phra That Doi Tung* (History of the Holy Relic of Mount Tung [i.e. Chiang Saen])" written between the 16th and the 17th century probably on the basis of older oral narratives (Penth, 1993). Equally famous are the *Tamnan Doi Suthep* (History of the Holy Relic of Mount Suthep [i.e. Chiang Mai])," the *Tamnan Cho Hae* (i.e. Phrae), the *Tamnan Chae Haeng* (i.e. Nan), the northeastern *Tamnan That Phnom* (i.e. Isan; Pruess, 1976), and the southern *Tamnan Phra That Nakhon Si Thammarat* (History of the Holy Relic of the City Nakhon Si Thammarat (i.e. Srī Dhammarāja).

From the early 15th century to the late 18th century, stories of Buddha images were very popular; they clearly form one of the oldest and most significant categories of *tamnan*. Some of these may have been translated from Pali sources, although they are mostly works originally written in the vernacular. The *Tamnan Phra Kaen Chan* (known as The Chronicle of the Sāvatthi Sandalwood Buddha Image; 15th cent.; Penth, 1994), the *Tamnan Phra Sila*, the *Tamnan Phra Chao Kaeo Setangkhamani*, the *Tamnan Mahamuni Rakhaeng* (unpubl.), and the *Tamnan Phra Chao Ton Luang* (five manuscripts available; Lagirarde, 2014) should be noted, among many others.

Less known are the texts dealing with prophecies, predictions, and histories of the future: they all share a common cosmological and eschatological worldview and are therefore subject to the imposed timeframe of the disappearance of Buddhism mentioned above. They seem to have been more popular in Lanna, especially from the late 18th century to the early 20th century. Most texts claim to report predictions made by the Buddha Gotama after he experienced a vision of the future. Titles might explicitly signal the content of the *tamnan* by mentioning *byākaraṇa* (Pal.; Skt. *vyākaraṇa*; Tha. *Phayakon*; "prediction") or *tamnai/thamnawai/buddha thamnawai* (prophecies [of the Buddha]). They sometimes give a clear indication about the theme addressed in the text (*Tamnan Pancha Buddha Sasana* [Story of the Five [Thousand Years] of the Buddha's Teaching]; *Tamnan Phra Chao Sip Ton* [Story of the Ten Buddhas]). But some others appear like chronicles of cities (*Tamnan Kapilawatthu* [Story of Kapilavastu], *Tamnan Rawaek* [Story of [the Unidentified City of] Rawaek) or kings (*Tamnan Thammikarat* [Story of the Dhammikarāja; for abstracts, see Lagirarde, 2007). This rich literature, still almost unknown to scholarship, has complex intertextual links with other Pali and vernacular texts transmitted in the region.

In Siam the story of the future has also been told in verses, like in the *Phleng Yao Phayakon Krung Si*

Ayuthaya (Verses of Prediction about the City of Śrī Ayutthaya) and the *Phleng Yao Buddha Thamnai*; both texts are connected to the *Khamhaikan Chao Krungkao* (Testimony of the People of the Old Kingdom). In fact, the royal chronicles of Siam (*phraratcha phongsawadan*) might be regarded as a form of Buddhist historiography, insofar as they deal in part with works of merit undertaken by kings and other lords and with various royal efforts to propagate the teaching of the Buddha (for the most elaborate synoptic translation, see Cushman, 2000).

Many *tamnan*s in the Lanna tradition give a relative precedence to the Mon-Khmer peoples in Thai history, who inhabited the region before the appearance of Tai-speaking communities, in order to acknowledge the role that they have played in the introduction of Buddhism and the foundation of the first principalities (*mueang*). Historical texts are sometimes clumsily trying to find etymologies of possibly non-Tai toponyms without clear results, as many local names likely derive from Mon-Khmer languages not understood by the Thai themselves. In this respect, religious historiography does admit – albeit with often a heavy dose of condescension – the presence of Buddhist communities prior to the establishment of the Thai saṅghas, ancient communities whose origin and traditions are very poorly known aside from scattered epigraphic traces in the region. The *Tamnan Suwanna Khamdaeng* (Story of Suwanna Khamdaeng; trans. into French by Notton, 1926) does assert that the story of Chiang Mai was even written in Lua (Mon?) to be translated for King Mangrai (r. c. 1263–1317), the founder of the northern Thai dynasty.

Historiography: Burma

Burmese historical literature is a corpus of several hundred texts with a fairly defined division into genres (Tet Htoot, 1961; Blackmore, 1967). Key among them are royal and monastic chronicles, histories of Buddhist sacred sites and objects, recensions of Pali historiographic (*vaṃsa*) literature, accounts of royal military campaigns and other achievements, records of construction of royal cities or palaces and of holding of court ceremonies, and historical bibliographies of the Pali canon (Bur. *piṭakat*; Pal. *tipiṭaka*) as it was understood in Burma. The corpus did not have exclusive boundaries and was related to certain types of administrative and ceremonial documents by virtue of shared textual genealogies and use in administrative practice. At the same time, various genres of historical works served different purposes and had different modes of circulation. Thus, despite textual and conceptual links, all these types of histories were not perceived as parts of a single knowledge domain or type of literature.

Aside from accounts focused exclusively on court ceremonies or construction projects, all other genres may be considered Buddhist historiography either because they relate histories of things Buddhist or because they construct a moral discourse with the help of Buddhist notions. Histories of Buddhism or Buddhist institutions did not dominate Burmese historiography, with a variety of other subjects serving as a focus of literary activity. In general, systematic production of historical literature and continuation of a dozen different historiographic genres were mostly the result of the interest of the royal court. Though monastic authors were also active, they were involved with a narrower range of genres. Other social agents made no perceptible contributions to history writing until the late 19th century.

Most Burmese historical texts remain unpublished, while even those published have not been edited critically. Very little, if anything, is known about the context of production and circulation of these texts. The earliest surviving works date to the late 15th and early 16th centuries (Tin Ohn, 1961, 85), though they most likely had predecessors. It is not yet possible to reconstruct the early phases of development of this literature or explain why historiography might have had better chances at survival from the 16th century onward. In light of the available sources, what follows below outlines the developments between the 16th and early 20th centuries.

Genres Focused on Kingship and Royal Court

Royal chronicles known as *rājavaṅ* (pron. *yazawin*; Pal. *rājavaṃsa*) are primarily concerned with tracing successions of rulers (Kirichenko, 2009, 5–15). More than one hundred texts, either in prose or in verse, were written from the 16th century onward. In terms of textual genealogy and scope, these works may be divided in three broad types, of which two are differentiated by their treatment of royal succession in the historical "country of Burmans" (*mran mā praññ*; pron. *myanma-pyi*), that is, the dry zone of Upper Burma, while the third covers lords of foreign people and countries.

In dealing with Burmese kings, the compilers of *rājavaṅ*s worked either as narrators having no direct relationship with the dynasties that they accounted for or as court historiographers and archivists whose retelling of history was rooted in a dynastic context. The first type of activity was usually based on circulating historical texts, while official historiography relied primarily on reworking and editing of both archival and formal court documents, such as royal annals (which were kept on a daily basis but never circulated) and accounts of ceremonies and events (which were circulated among the courtiers). Due to the cumulative development of major official *rājavaṅ*s and their high degree of intertextuality, both types of compilation process were usually involved in the production of lengthier historical texts. However, shorter sources usually represented only one type.

Chronicles written to trace royal succession in retrospect on the basis of existing texts may be further subdivided into three distinct subtypes, namely chronicles of the city of Toṅ ṅū (pron. Taungngu), of the city of Pu gaṁ (pron. Bagan), and of the full

sequence of cities recognized as royal: Sarekhettarā (pron. Thayekhittaya; i.e. Śrīkṣetra; present-day Pyay), Pu gaṁ (present-day Bagan), Paṅḥ ya (pron. and present-day Pinya), Cac kuiṅḥ (pron. and present-day Sagaing), Ava (present-day Inwa) – capitals of the Konbaung dynasty. The latter conception of the sequence of royal cities rested on the idea that the Buddhist teaching (*sāsana*) always reposes in a certain city, one at a time, and that a number of sites would alternate as the mainstay of the *sāsana* during the five thousand years of its existence. This idea, which most likely emerged in the 14th century to conceptualize the decline of Pu gaṁ as the primary center of political power and the rise of the new royal city of Ava, was substantiated by stories of the Buddha traveling up the Irrawaddy and giving predictions about such sites (Kirichenko, 2005b). The narrative tracing this sequence is first attested in the *Rājavaṅ kyau* (pron. *Yazawin-gyaw*; Celebrated Chronicle) of Sīlavaṃsa, written in the early 16th century (Sīlavaṃsa, n.d.). This type of narrative was adopted in official historiography and replicated in later locally produced *rājavaṅ*s – production of brief works of this type in provincial towns of Upper Burma continued as late as 1870s and 1880s.

Chronicles based on court annals represent the official historiography of the Nyaungyan (1597–1752) and Konbaung (1752–1885) dynasties. The earliest extant work that belongs to this category is known as the *Mahārajavaṅ krīḥ* (pron. *Mahayazawin-gyi*; Extensive Great Chronicle) or the *Mahārājavaṃsa* (pron. *Mahayazawuntha*; Great Chronicle; Lieberman, 1986). Written in circa 1720, it is attributed to Ūḥ Kulāḥ (pron. U Kala), a little-known official and the author of two other *rājavaṅ*s. The text itself claims no authorship, but the attribution is supported by references in later texts and by shorter versions of the *Mahārājavaṃsa* that mention Ūḥ Kulāḥ as their compiler. The *Mahārājavaṃsa* builds on earlier texts, incorporating sections of at least two of them (*Rājavaṅ kyau* and an unnamed chronicle surviving in ms. no. 40 from Ūḥ Bhuiḥ Sīḥ Library in Sa thuṁ) almost verbatim and having parallels with many others (Kulā, 1960–1961). It also served as a textual basis for later updated official chronicles, such as the *Mahārājavaṅ sac*, the *Mhan nanḥ mahārājavaṅ tau krīḥ*, and the *Muṃ rveḥ mahārājavaṅ kyau* (pron. *Monywe-mahayazawin-gyaw*; Celebrated Great Chronicle of Monywe). The *Mahārājavaṅ sac* (pron. *Mahayazawin-thit*; New Great Chronicle) was written in the late 18th century by Ūḥ Thvanḥ Ññui (pron. U Htun Nyo), the *Mhan nanḥ mahārājavaṅ tau krīḥ* (pron. *Hmannan-mahayazawin-daw-gyi*; Royal Extensive Great Chronicle [Compiled in front of] the Glass Palace) was composed in 1829–1831 by a specially appointed committee, and the *Muṃ rveḥ mahārājavaṅ kyau* was written under the supervision of Muṁ Rveḥ Jetavan cha rā tau (pron. Monywe Zetawun Hsayadaw) Ariyāvaṃsa Ādiccaraṃsī, simultaneously with the *Mhan nanḥ mahārājavaṅ tau krīḥ*. All these sources covered the full sequence of cities recognized as royal, though the sections dealing with the current dynasty were the most detailed.

A separate type of *rājavaṅ* deals with the succession of "foreign" kings. Extant are the chronicles of the Mon kings of Lower Burma (see Tun Aung Chain, trans., 2010), of Ra khuiṅ (Arakan), the Shan states, Ayutthaya (see Tun Aung Chain, trans., 2005), Chiang Mai (the *Zinme yazawin*), China, Sri Lanka, Portugal, and Great Britain. In the first five cases, the production of *rājavaṅ*s also involved the translation of native sources and/or the recording of testimonies of natives of these areas, reflecting one of the many aspects in which Burmese historiography was embedded into a larger Southeast Asian tradition (see McCormick, 2011, 129–146).

Several other typologies of *rājavaṅ*s have been proposed, suggesting that earlier texts were local chronicles written from the standpoint of a single region or dynasty. However, the early 18th century saw the emergence of a national historiography that produced more comprehensive texts focused on the entire Irrawaddy basin and western mainland Southeast Asia (Tin Ohn, 1961, 86; Blackmore, 1967, 314–315; Lieberman, 1986, 252; Charney, 2003, 211).

A more complex trajectory than a shift from local to national history is suggested by A. Kirichenko (2003; 2009; partly based on Hla Pe, 1985, 46–47), who identifies several major developments in *rājavaṅ* writing. The earliest was the appearance of a concept of history that traced royal succession through a sequence of cities acting as mainstays of the *sāsana*. This idea provided the framework to structure chronicle narratives and to sequence a number of locations starting with cities in Majjhimadesa (i.e. central India) and culminating in the Burmese royal city of Ava built in 1365 (Kirichenko, 2005b). It also established the basis for counting up the royal succession of more than 300,000 rulers starting with Mahāsammata (the first king recognized by Pali Buddhist cosmology) and ending with the currently reigning Burmese overlord.

In developing this conceptual framework, Burmese historiographers adapted materials from the Pali canon and Pali chronicles. However, the argument that Burmese historiography had Pali chronicles of Sri Lanka as its model (Pe Maung Tin, 1923, xiii; Sarkisyanz, 1965, 3–5; Hla Pe, 1985, 37–38) results from quite superficial comparison, for, even in those cases in which Burmese authors have drawn on Sri Lankan Pali materials, their works carry messages different from those of the original Pali texts. Instead of writing the history of Buddhism-cum-the history of Sri Lanka, compilers of the *rājavaṅ*s focused on Burmese *rājavaṃsa* and recycled Pali-derived materials to emphasize the mission of this lineage of rulers as the custodians of the *sāsana* (Kirichenko, 2009, 25). It also appears that the immediate source shaping Pali-derived sections of the *rājavaṅ*s was the *Vaṃsamālīnivīlāsinī* (or another very similar text), that is, an abridged adaptation of the *Mahāvaṃsa* known in Southeast Asia, and not the parent chronicle compiled in Sri Lanka (see *Rājavaṅ kyau*; *Jātā tau puṃ rājavaṅ* [1960, 23–31]; *Mahāvaṃsamālīnivīlāsinī* [2001]; *Mahāvaṃsa* [1908]).

Apart from materials serving to introduce paradigmatic concepts of royal succession going back to Mahāsammata and defined by the movements of the *sāsana* from one city to another, sections of *rājavaṅ*s that dealt with the kings of Sarekhettarā and Pu gaṁ, that is, the lords who were believed to have ruled from the 5th century BCE to the 14th century CE, were a pastiche of origin stories of local spirits (*nat*; Pal. *deva*; the majority of which were either kings or courtiers who suffered violent and/or unjust deaths, thus rendering the subject within the scope of royal chronicles), Buddhist monuments and images, and legends of royal exploits (see e.g. Pe Maung Tin & Luce, 1923). The textual history of these elements, that is, their earlier existence as independent sources or production in the context of *rājavaṅ* writing, requires further research.

Sections of *rājavaṅ*s dealing with the 14th to the mid-16th century have a different mix of information. They do not contain origin stories of spirits or Buddhist monuments but mostly comprise materials adapted from the sources focused on the wars that the rulers of Ava waged between 1365 and 1527 and on the counsel by learned ministers supposedly given to these rulers and their predecessors who reigned in Pinya and Sagaing in the early to mid-14th century.

Later non-*rājavaṅ* versions of such materials survive as independent texts, for example the *Rājādhirāj areḥ tau puṃ* (pron. *Yazadarit ayedawbon*; The Account of Affairs of [King] Yazadarit) and *Maṅḥ rājā puṃ* (pron. *Min yaza bon*; The Precedents [Told by Minister] Min Yaza), but they differ from *rājavaṅ*s that share this content in many details, suggesting long independent revision paths. Inclusion of these sections into royal chronicles most likely occurred in the 17th century or earlier. However, currently available versions of the *Rājādhirāj areḥ tau puṃ* (in Burmese, Mon, and Thai [McCormick, 2011, 127]) and *Maṅḥ rājā puṃ* (in Burmese) do not predate the 18th century, so nothing can be said with certainty about the way in which these sections appeared or what the origins of these sources are.

The next major transition in the production of *rājavaṅ*s was the development of court annals, which may have appeared as early as the mid-16th century. As a result, later *rājavaṅ*s remained structured around the sequence of royal cities described as the mainstays of the *sāsana*, but, as a literary enterprise, they ceased to be conceptual works and became more straightforward records of events.

Sections covering the reigns of the kings Maṅḥ ta rāḥ rhve thīḥ (pron. Mintaya Shwehti; r. 1531–1550) and Chaṅ phrū myāḥ rhaṅ (pron. Hsinbyumyashin; r. 1551–1581) still retained or imitated the characteristics of preceding sections; they largely narrated war episodes mentioning, in particular, how strategic decisions were made on the basis of discussions with ministers (e.g. the *Mahārājavaṅ krīḥ* [vol. I, 350–440; vol. II, 1–66, 163–439; vol. III, 1–69, 1960–1961). At the same time, they incorporated new features, such as brief records of ceremonies involving members of royalty, the arrival of foreign envoys, court merit making, and conspicuous events that occurred in the capital city. Together with the narratives of military campaigns, which in the 17th century no longer featured dialogues among leaders that were so central in the earlier sections, these records comprised the bulk of materials made available in *rājavaṅ*s until the disappearance of the genre after the 1930s.

Another feature apparent in the sections that cover the events from the 17th century onward is a more official and reserved style of narration that results in a more depersonalized treatment of royalty. This reflects a transition to historiography created by officials in active service. The editing characteristic of official historiography becomes apparent once one compares different versions of *rājavaṅ* and parallel nonofficial or less official sources. An example of an official chronicle in which such editorial interventions are least apparent is the concluding sections of the *Mahārājavaṃsa* that cover the years 1661–1711. While official court chronicles composed since the late 18th century provide aggregated summary descriptions, written or edited long after the actual events, records of 1661–1711 are chronological notes capturing quotidian life as it is. As a result, this period is the only part of Burmese royal chronicles that features information on, for example, the changes of abbots in royally supported monasteries or repairs made there and reports on all key phases of religious and civil-construction projects instead of merely noting the completion of a few of them.

Editing and aggregation resulting in the lesser depth of detail are evident in the *Mahārājavaṅ sac*, the *Mhan nanḥ mahārājavaṅ tau krīḥ*, and the *Dutiya mahārājavaṅ tau krīḥ* (pron. *Dutiya mahayazawin-daw-gyi*; Second Royal Extensive Great Chronicle), a continuation of the *Mhan nanḥ mahārājavaṅ tau krīḥ* released in 1869 (Kirichenko, 2003, 90–91, 97n117; Allot, 1994, 82–86). It is similarly found in non- *rājavaṅ* sources, such as the two versions of the *Aloṅḥ maṅḥ ta rāḥ areḥ tau puṃ* (pron. *Alaungmintaya ayedawbon*; The Account of Affairs of [King] Alaungmintaya) and the *Chaṅ phrū myāḥ rhaṅ areḥ tau puṃ* (pron. *Hsinbyumyashin ayedawbon*; The Account of Affairs of [King] Hsinbyumyashin), both by Ūḥ Ne (pron. U Ne).

For reasons that remain to be investigated, between the 1760s and 1830s, multiple authors worked on overlapping projects, as a result of which Burmese kingship was spoken about in many voices (Tun Aung Chain, 2004). After the 1830s, the output of official historiography decreased, and significantly fewer titles came into circulation between 1840 and 1885. Perhaps, some of these works were lost as a result of the pillage of royal archives after the British takeover of Mandalay in 1885, yet, the generally sparing and relatively uneven coverage of events after the 1760s even in those chronicles that appeared before 1840 suggests that the court felt rather uneasy about documenting contemporary history.

This is illustrated by the fate of the *Muṃ rveḥ mahārājavaṅ kyau*, a more detailed chronicle as compared to the *Mhan nanḥ mahārājavaṅ tau krīḥ*, compiled at the same time and at the same place but with very limited circulation afterward. Moreover, the *Mhan nanḥ mahārājavaṅ tau krīḥ* – the text recognized by the court as the main authority – did not manage to supplant the earlier and outdated chronicles of Ūḥ Kulāḥ in circulation (overall, Ūḥ Kulāḥ's *rājavaṅ*s remained the most common of official chronicles until the 20th cent.). Finally, many more manuscript copies of the first volumes (covering the pre-17th century events) of any official *rājavaṅ* survive as compared to the ones dealing with the 17th to the 19th centuries. This suggests that the interest in contemporary kingship was generally limited. The decline in chronicling contemporary events, however, did not affect the enterprise of retrospective overviews of royal succession, and the production of synoptic *rājavaṅ*s continued.

Fluctuations in the compilation of royal chronicles are also indicative of varying demands for different types of historiographic works at the court. For example, few overlords were deemed worthy of an *areḥ tau puṃ*, an account of royal achievements, usually military. This honor was given mainly to the founders of dynasties or capital cities. "Accounts" (*cā tamḥ*; pron. *sadan*) of anointment, wedding, ear boring, consecration, cremation, and other ceremonies were produced routinely. However, as such events were usually modeled after the most recent occasions, older accounts were rarely consulted and rapidly fell out of circulation. An exception to this rule was works on the construction of royal cities, which emerged and endured as a particular subgenre in the Konbaung period due to frequent transfers of the capital during that time. Dozens of such accounts appeared between 1753 and 1859, the years when the first and the last of Konbaung seats of power were built (Tainturier, 2010, 32–36).

Genres Focused on Buddhist Monasticism

While palatial records such as those discussed above were produced by courters and circulated mainly among them, the domain of monastic historiography comprised predominantly of genealogies of monastic communities, chronicles of the Buddha's teaching, monastic biographies, and local histories (Kirichenko, 2011, 6).

Monastic genealogies (Pal. *ācariyavaṃsa*; Bur. *cha rā cañ sa muiṅḥ*; pron. *hsaya-zin-thamaing*), a genre dealing with leaders of particular monastic communities or lineages of particular monks, seem to have been particularly popular from the late 16th to the late 18th century. The earliest of such texts are currently known by references or quotations, and the earliest surviving *ācariyavaṃsa* is the *Samaṇavaṃsa cā tamḥ* (pron. *Thamanawunthasadan*) by Uttamasikkhā, compiled between 1706 and circa 1715. The opening and concluding sections of Uttamasikkhā's work covering the biography of Tisāsanadhja (1508[?]–1584[?]) from Sagaing and the lineage of monks from Pyay down to Tipiṭakālaṅkāra (1578–1651) from Taungbila are logically organized and have a more polished style in contrast to the middle part of the text, which deals with Tisāsanadhaja's disciples and the career of Uttamasikkhā himself and looks more like a collection of stray notes. This difference of style most likely indicates fragments incorporated from earlier texts; moreover, a slightly shorter version of the concluding section of *Samaṇavaṃsa cā tamḥ* dealing with monks from Pyay is appended to another work of Uttamasikkhā that seems to predate 1692 (see *Samaṇavaṃsa cā tamḥ*, III.10–15; *Sikkhā thap rā so achuṁḥ aphrat*). A poem on the sequence of abbots of the Ta Rvaṅ Khre Monastery compiled by Indapabhā (1614/1615–1694/1695) is mentioned by Uttamasikkhā (see *Samaṇavaṃsa cā tamḥ*, II.7). Finally, the passage on the seven monasteries of Saga from Pinya in the *Sāsanā chak cā* (see below) might be an adaptation from the chronicle of that important monastery flourishing from the 14th to the 16th century.

Earlier *ācariyavaṃsas* focused on individual communities, leaving aside broader issues of Buddhist history or defining the contribution of a given community to the overall venture of the *sāsana* in comparison to other communities, but the rise of monastic reform movements in the late 17th century transformed the genre. Such works – for example several Pali and vernacular *ācariyavaṃsas* produced by Atula cha rā tau Yasa (1700–1786) and Chuṁ thāḥ (pron. Hsonda) cha rā tau Nandamāla's (1718–1784) *Ācariyavaṃsa* (The Lineage of Teachers; 1778) and *Sāsanasuddhidīpaka* (Exposition on the Purification of the *Sāsana*; c. 1784) – were polemical in nature and argued for a specific role of their author and his community in the history of Buddhism (Kirichenko, 2011, 8–12). Deeply rooted in the context of debates on the effects of donations to corrupt monks who disregard the Vinaya, definitions of valid monastic practice, the necessity of radical monastic reform, and proper attire for novices, these texts were rhetorical tools that advocated the unification of the saṅgha on the basis of competing reform agendas.

The evolution of *ācariyavaṃsas* toward such contextual history led to a brief efflorescence of the genre of "chronicles of the teaching" (Pal. *sāsanavaṃsa*; Bur. *sāsanavaṅ*; pron. *thathanawin*; Pranke, 2004, 26). The *Vaṃsamāla* (The Garland of Lineages; c. 1790–1810) by Ññoṅ kanḥ (pron. Nyaunggan) cha rā tau Kavinda (1753–1821), the *Vaṃsadīpanī* (pron. *Wuntha-dipani*; Exposition on the Lineage [of Elders]; c. 1795–1798) by Jinālaṅkāradhaja (1742–after 1800), the *Sāsanā chak cā* (pron. *Thathana zet-sa*; Generations of the *Sāsana*; c. 1800) by Cuṅ mruiḥ (pron. Son-myo) cha rā tau, and the *Sāsanavaṃsa-cā-tamḥ* (pron. *Thathanawuntha-sadan*; The Lineage of the *Sāsana*; c. 1800) by the first Moṅ thoṅ (pron. Maungdaung) cha rā tau Ñāṇa (1751–1832) all traced the transmission of the *sāsana* since the life of the Buddha and positioned Upper Burma within a universal history of Buddhism. The works of the first Moṅ thoṅ cha rā tau Ñāṇa and Jinālaṅkāradhaja were highly partisan in their advocacy of monastic reform and elevated its leaders to the level of conveners of Buddhist councils and disciples of the Buddha. The *Sāsanā chak cā* is interesting as it is a counterreform text arguing that all communities in the saṅgha are equally valid.

The unwillingness of the crown to sponsor the reform after 1812 stripped the *sāsanavaṃsas* of practical relevance and made later texts less concerned with current affairs. For example, the *Sāsanālaṅkāra-cā-tamḥ* (pron. *Thathana-linggaya-sadan*; The Embellishment of the *Sāsana*; 1831) was, at a certain level, a self-apology, for it was written by a former head of the court monastic hierarchy, the first Moṅ thoṅ cha rā tau Ñāṇa, now disrobed and bearing the lay title Mahādhammasaṅkram. Compiled in response to a royal request to provide a comprehensive account of the transmission of the *sāsana*, this work selectively appropriated textual materials from earlier *ācariyavaṃsas* and *sāsanavaṃsas* regardless of their lineage affiliation and reframed them in light of arguments used in the 1780s and 1790s to prove that a monastic faction advocating that novices should dress exactly like monks when collecting alms food constituted the only group in the saṅgha worthy of support (Kirichenko, 2005a). Despite its obsolete arguments, the text was well received and became the most commonly copied religious chronicle in the late 19th and early 20th centuries, its success, most likely, being due to the fact that it summarized and thus supplanted earlier literature on the subject.

The *Sāsanavaṃsappadīpikā* (The Light on the [Chronicle Called] the Lineage of the *Sāsana*; 1861) by the third Moṅ thoṅ cha rā tau Paññāsāmi (?–1869) was a reworked translation of the *Sāsanālaṅkāra-cā-tamḥ* into Pali, made at the request of Sinhalese monks visiting Mandalay (Bode, 1909). In essence, it served to give the monks of the Sinhalese Ramanna

Nikaya order a better understanding of their Burmese lineage. Due to the circulation of the text abroad and the fact that it was in Pali, a language that was favored over vernaculars in Theravāda until recently, from the 1890s to the 1970s, *Sāsanavaṃsappadīpikā* has been the most frequently used source for the study of Buddhism in Burma outside of the country (e.g. Bode, 1909; Ray, 1946; Hazra, 1982, 83–130; Bischoff, 1995). This exalted position was hardly shattered even when the derivative nature of the source was demonstrated (Lieberman, 1976), for the majority of earlier sources underlying both the *Sāsanālaṅkāra-cā-tamḥ* and the *Sāsanavaṃsappadīpikā* still remain unpublished.

The eclipse of *sāsanavaṃsas* was paralleled by the proliferation of another genre, that of monastic biographies (*theruppatti*). Appearing well before the 19th century, this genre, however, gained currency during that period and remains the most common type of Burmese Buddhist historiography until now. Being less polemically charged or even neutral and serving mostly as homage to individual monks, this genre with its celebration of learning and sanctity was better suited for a setting in which it was becoming less and less common to question the validity of current monasticism; in contrast, the belief that Burma cherishes pure Theravāda, the most authentic form of Buddhism, was gaining currency. In the 19th and early 20th centuries, biographies focusing on contemporary figures were often composed to commemorate them once they were dead; however, this was becoming less common as the genre developed. Also, while early *theruppattis* concentrated mostly on anecdotal accounts, the early 20th century saw the emergence of proper biographies (Kirichenko, 2011, 17–18).

An important feature of Burmese monastic historiography is its preoccupation with monks. The leading role in the field of Buddhism was assigned to kings only in the *sāsanavaṃsas*, that is, sources that appeared as a result of monastic reform and served to persuade the crown to undertake a particular course of action. In the *ācariyavaṃsas* and *theruppattis*, the upholding of the *sāsana* was the work of the saṅgha with kings appearing only on the sidelines, thus making these genres very different from *rājavaṅs* and Pali chronicles originating with the Mahāvihāra.

Another common aspect of monastic history writing was its self-commentarial nature. From the 17th to the 19th century, monks tended to extol themselves, their monasteries, and their lineages or communities (e.g. *Pa luiṅḥ cha rā tau puñña sa muiṅḥ*; *Ňhak pac toṅ sa muiṅḥ*). An interest in the history of unrelated monks appears rather late and was first characteristic of lay writers, while monastic historians writing about their peers emerged only in the 20th century. The primary objective of such historiography was not to provide role models or promote the life of renunciation but to strengthen the identity of disciples and donors and instill a sense of mission into them (Kirichenko, 2011, 19).

Genres Focused on Other Subjects

The genres of *sa muiṅḥ* (pron. *thamaing*) deal with Buddhist monuments, Buddha images, relics, monasteries, cities, villages, and the Pali canon. Among all types of *sa muiṅḥ*, histories of sacred sites and objects are the most common; however, of thousands of Buddhist monuments that were built in Burma, very few have associated *sa muiṅḥs*. Prominent sites both in Burma and beyond (in India, Sri Lanka, northern Thailand, Arakan, etc.) were usually honored by at least one *sa muiṅḥ*. More often than not, such *sa muiṅḥs* tended to be short, anonymous works that narrated the origin story of the site or relic (see e.g. a representative collection of *sa muiṅḥs* catalogued as manuscripts nos. 45132 to 45144 in the Universities' Central Library, Yangon). Less frequently, *sa muiṅḥs* included lists of lands allotted for the upkeep of the monument or customary fees collected in the area (see e.g. the *Kroṅ tau rā sa muiṅḥ*). Only a fraction of these texts accounted for history after the founding or consecration of a site, that is, donations or renovations made to the monument (see the abovementioned mss nos. 45132 and 45144; *Rhve mau dho sa muiṅḥ*). Such information is, however, common in modern *sa muiṅḥs* that appeared in the mid-20th century, and this transition in *sa muiṅḥ* writing may be one of the reasons that limited the interest in publishing early *sa muiṅḥs*.

Sa muiṅḥs of cities also tend to concentrate on foundation legends that link the site with powerful kings covered in *rājavaṅs* (see e.g. *Han laṅḥ mrui. sa muiṅḥ laṅkā*). Additionally, *sa muiṅḥs* may list the boundaries of the area subordinate to the city and the area-related nomenclatures, such as reservoirs, fisheries, or villages. Some detail taxes and fees levied in the area (see e.g. the *Rhve praññ krīḥ sa muiṅḥ*). However, none contains historical data on local officials and people. In contrast to *sa muiṅḥs* about monuments and cities, *sa muiṅḥs* about monasteries recorded continuous history and details about the incumbents and thus represent the only type of premodern *sa muiṅḥ* that have a chronological structure and historical narration (see the *Ṅhak pac toṅ sa muiṅḥ*).

Compared to other historiographic works, *sa muiṅḥ*s had little circulation in manuscript and were mostly available in situ. Beyond the site itself, histories of monuments and relics seem to have circulated most commonly as parts of manuscript collections of *sa muiṅḥ*s and lithic inscriptions rather than as individual manuscript copies of single texts. This limited availability reflected the fact that many *sa muiṅḥ*s were more administrative than historical documents, their primary purpose was to detail boundaries, and so they were relevant primarily for those who were involved with the administration of the site. Only in the late 19th century did a newer type of *sa muiṅḥ* appear that had a more literary and scholarly nature – for example the *Padacetiyadīpanī* (The Light on the [Buddha's] Footprint) by Ūḥ Dīpa and the *Sa laṅḥ mrui. sa muiṅḥ* (pron. *Salin-myo-thamaing*; The History of Salin Town) by Ūḥ Cintamaṇi – and it is these *sa muiṅḥ*s that are better known to modern readers.

A separate genre of *sa muiṅḥ*s was the histories or, rather, bibliographies of the Buddhist canon (known as *piṭakat sa muiṅḥ*; pron. *pitakat-thamaing*). Produced since the 16th or 17th century by the editors of royal manuscripts, such works detailed the range of texts that constituted the canon, identified their authors, and occasionally provided details of manuscript copies. At least 20 *piṭakat sa muiṅḥ*s survive and serve as a guide to evolving notions of canon and textual authority as well as to the transmission of Pali literature at the Burmese court. Only two such bibliographies, the *Gandhavaṃsa* (Genealogy of Books; late 17th-early 18th cents.) by Nandapaññā and the *Piṭakat sa muiṅḥ* (History of *Piṭaka*; 1888) by Ūḥ Yaṁ (pron. U Yan), have been published.

An important component of historiography has also been contributions to the genre of Pali *vaṃsas* and their vernacular recensions. All major Sinhalese chronicles, histories of relics, and histories of the future (*anāgatavaṃsa*) available in Pali were translated and circulated both as bilingual word-by-word commentaries (*nissaya*) and as purely vernacular narratives. Overlapping with them was a tradition of *buddhavaṅ* (pron. *botdawin*) chronicles on the buddhas of the past and the future as well as on the life of Gotama Buddha. These texts were also available in Pali, bilingual and vernacular versions, and with a variety of foci ranging from scholarly reworkings of earlier Pali sources to eulogies of the Buddha (see e.g. the *Tathāgatuppatti kyaṁḥ*). Short versions of such texts in verse, in particular those dealing with the sequence of rainy seasons spent by the Buddha in different places (*vassakkama*), had liturgical use and were memorized and recited to venerate the Buddha (see e.g. *Vāsamālinī kyaṁḥ*; *Vassakkamasaṅkhepa*). An important subgenre related to *anāgatavaṃsas* and *buddhavaṃsas* was records of Buddha's predictions about the five thousand years of *sāsana* in Burma that, among others, underlay *rājavaṅ* narratives about the transitions of political power in the country (see e.g. *Bhu rāḥ nhut ka pāṭh sa muiṅḥ*).

In terms of textual basis, this *vaṃsa* literature demonstrates active use of both standard and non-standard Pali sources as well as of local traditions, a phenomenon common to mainland Southeast Asia (see Skilling, 2014, 361–362). This, however, should not be understood as implying that all such texts had equal authority and influence. To the contrary, the authenticity of many of them was hotly debated as Burmese Buddhism was moving toward the conception of what P. Skilling has called "the exclusive Tripiṭaka prescribed by the Lankan Pali exegetical tradition of Buddhaghosa and others" (Skilling, 2014, 361). By the mid-20th century, the majority of these texts were almost completely forgotten.

Transmission Channels

An important aspect of the multifunctional and cross-genre nature of Burmese historiography is its residual orality (McCormick, 2011, 138–141). Though being primarily a tradition of adaptation and recombination of written texts, historiography also involved performance or oral retelling, thence a trend to versification in many genres. *Rājavaṅs*, *sa muiṅḥ*s, and *vaṃsa* narratives circulated in verse too; accounts of royal lineages and court ceremonies were made the subject of dedicated genres of poetry such as *e khyaṅḥ* (pron. *egyin*) and *mau kvaṁḥ* (pron. *mawgun*; see *E khyaṅḥ hoṅḥ poṅ khyup*; *Tan tāḥ ūḥ taññ maṅgalā cetī tau mau kvaṁḥ*; see also Hla Pe, 1985, 8–9, 42–43), and quotations from poetic versions were routinely integrated into works in prose as both an index to parallel forms of historical records and a demonstration of learning. Another manifestation of parallel oral circulation of historiographic materials was the mnemonic tools used to remember dates, names, and events that are

of parallel oral circulation of
ials was the mnemonic tools
s, names, and events that are

still essential in contemporary practices of Burmese historical memory and that are well attested in historical texts (Hla Pe, 1985, 60–62).

Besides the cross-use of genres, a complex relationship between written historiography and orally transmitted traditions is reflected at the level of content. Historiographic content often entered oral circulation from texts, while popular oral stories were incorporated into written historiography. The most illustrative example of this process is the historiographical fiction of the early 20th century, best represented by works of Ūḥ Aoṅ (pron. U Aung), Cā tau pran cha rā Sinḥ (pron. Sa-daw-pyan Hsaya Thein), and Mhau pī cha rā Sinḥ (pron. Hmawbi Hsaya Thein, 1862–1942). These best-selling texts fused loads of creative imagination with anecdotal information and limited readings in historical sources, establishing a novel category of "oral history" (*pāḥ cap rājavaṅ*; pron. *pazat yazawin*) that claimed to be either a record of social memory or an authentic record that had been privately transmitted, but in fact was written fiction appealing to popular taste and thus enjoying high acceptance and later oral circulation as history, regardless of its obvious contradictions with verifiable written evidence.

Two main genres of such *pāḥ cap rājavaṅ* were witty and humorous sermons and conversations attributed to famous historical monks and dialogues of various interlocutors with savvy courtiers and monks. These works were taken as historical sources until recently and still play critical role in popular Burmese understanding of the late 18th and 19th centuries (e.g. *Saṅgajā Cha rā tau ca kāḥ puṃ poṅ khyup*; *Pāḥ cap rājavaṅ*; *Amat krī Ūḥ Pau Ūḥ lhyoṁ htuṁ*; for criticism, see Taṅ Nuiṅ Tuiḥ, 2006). For instance, in this rendering of monastic history, the key figure in the 19th-century saṅgha becomes Saṅgajā (pron. Thingaza) cha rā tau Aggadhamma (1815–1886), whose primary roles as administrator, scholar, and itinerant network builder are eclipsed by the image of a preacher whose primary assets were wit and ability to be entertaining (for such popular representation, see Htin Aung, 1966).

The influence of oral historiography of the early 20th century also highlights a larger process of fusing of professional history writing with popular memory and popular recasting of historical figures. Parallel written and oral transmission of origin stories, stories built on dialogues between two figures (a king and a minister, a king and a monk, two monks), and historical anecdotes delineates those areas in written historiography in which the latter had the greatest exposure to popular traditions. This suggests that popular stereotypes might also have been instrumental in the 17th and 18th centuries, when early modern royal and monastic historiography was taking shape and a small selection of pre-18th-century monks – including the miracle maker Poṅ loṅ Rhaṅ Kassapa (13th cent.), Rhaṅ Disāpāmokkha (late 13th cent.), monk-poets Sīlavaṃsa (1453–1520) and Raṭṭhasāra (1468–1529), sorcerer Bhā mai cha rā tau (1522–1610), and the jack-of-all-trades Tipiṭakālaṅkāra (see above) – were chosen from a much larger pool of prominent members of the saṅgha as the preferred subjects for imaginative retellings (e.g. *Rhaṅ Mahāsīlavaṃsa nhaṅ Rhaṅ Mahāraṭṭhasāra ameḥ aphre*; *Padacetiyadīpanī* [1964, 106–112]).

Local Literatures

Local Literatures: Tamil

Evidence points to a significant body of literature composed in Tamil by Buddhist authors, from long narratives such as the *Kuṇṭalakēci*, a text mentioned by name (as the *Kuṇḍalakesivatthu*) in the *Vimativinodanī* attributed to Kassapa (von Hinüber, 1996, 159; Monius, 2001, 124), to doctrinal collections and a glossary on the *jātaka* stories – of which only fragments remain (Monius, 2001, 7–8). Only three complete Buddhist texts composed in Tamil survive. The earliest is a long narrative known as the *Maṇimēkalai* or, more formally, as the *Maṇimēkalaituṟavu* (The Renunciation of Maṇimēkalai), attributed to an author known as Cattaṉār and roughly datable to the 6th century CE (see Caminataiyar, 1981). The second is the *Vīracōḻiyam*, an 11th-century theoretical treatise on Tamil grammar and poetics named for its royal patron, Vīracōḻaṉ, and attributed to Puttamittiraṉ. The *Vīracōḻiyam*'s accompanying commentary, believed to have been written by Puttamittiraṉ's disciple, Peruntēvaṉār, constitutes the third (Kovintaraja Mutaliyar, 1970). While all three texts display obvious Buddhist commitments and orientations, unfortunately little is known of the Buddhist communities that produced each author or of the communities of reception and transmission that would have understood each work as both a contribution to Tamil literature and as explicitly Buddhist.

The *Maṇimēkalai*, rediscovered in the 19th century by the indefatigable scholar of Tamil literature, U.V. Caminataiyar (1855–1942), is a long poetic narrative of more than 4,700 lines, arranged in 30 chapters, that tells the story of Maṇimēkalai, the young daughter of a former courtesan who renounces the courtly life to become a Buddhist nun. Numerous translations or renditions of the text are available in English (Madhaviah, 1920; Panchapakesa Ayyar, 1947; Pope, 1987; Nandakumar, 1989; Daniélou, 1993; Guruswamy & Srinivasan, 1994). The preface to the text (of uncertain provenance) ties the *Maṇimēkalai* to an earlier, perhaps 4th- or 5th-century, long narrative poem in Tamil known as the *Cilappatikāram* by Iḷaṅkō Aṭikaḷ (Caminataiyar, 1978) in terms of both content and authorship. While little in the earlier *Cilappatikāram* suggests a Buddhist worldview, Maṇimēkalai does appear briefly there as the illegitimate offspring of the text's ill-fated hero, Kōvalaṉ, and his courtesan lover, Mātavi; after Kōvalaṉ returns to his lawful wife and is unjustly killed at the command of the king of Madurai, Mātavi becomes a Buddhist nun and leaves the court with her young daughter. The author of the *Maṇimēkalai*, Cattaṉār, is identified in the preface as a wealthy grain merchant and friend to the king, Iḷaṅko Aṭikaḷ, who is said to have composed the *Cilappatikāram* (Caminataiyar, 1981, 9). Along with the *Cilappatikāram*, the *Maṇimēkalai* is eventually classified as one of the five great poetic works (*aimperuṅkāppiyam*) of Tamil literature (Zvelebil, 1992, 73n126).

The story of Maṇimēkalai's renunciation unfolds uniquely in this Tamil text, although many of the elements of the narrative echo themes and images in other Buddhist works across multiple languages (Monius, 2001, 18–24). The story opens in the coastal city of Pukār on the eve of the great festival of Indra. All is not well, however, as the courtesan Mātavi announces that she will not dance as expected in the festival; upon learning of the death of her former lover, Kōvalaṉ, father to her young daughter, Maṇimēkalai, she has sought refuge at the feet of the celebrated Buddhist teacher, Aṟavaṇaṉ (a Tamil equivalent of Dharmapāla, "Protector of the Dharma"). Maṇimēkalai sheds tears on learning of her father's violent end, defiles a garland, and is sent out to pick flowers in a local park dedicated to the Buddha, site of a wondrous crystal pavilion with a lotus seat said to demonstrate the necessity of proper intention when making offerings to the Buddha. There the lust-driven prince, Utayakumaraṉ, spots the gorgeous young Maṇimēkalai, who is quickly whisked away by her friend to the crystal pavilion, while the friend herself frustrates the amorous prince with a discourse on the impermanence of the flesh.

The goddess of the sea, Maṇimēkalā, for whom the heroine is named, suddenly appears, praises the Buddha, and describes in great detail a "temple of the cosmic place" (Tam. *cakkaravāḷakkōṭṭam*), incorrectly assumed by the ignorant to be simply a cremation ground; rather, the goddess explains, the place should be understood as a place of meditation on the inevitability of death and decay. She then whisks

her namesake off to the island of Maṇipallavam, where the young girl stumbles upon a magnificently bejeweled seat of the Buddha. Falling before the seat in adoration, Maṇimēkalai remembers her past lives – including Utayakumaraṉ's role as her former husband, Irākulaṉ (Skt. Rāhula) – and the goddess grants the young woman magical powers to fly, change physical form, and satisfy her own hunger. Maṇimēkalai next receives the miraculous begging bowl known as Amutacurapi ("Nectar Cow") that never empties if used in service to the poor. Thus empowered by the goddess Maṇimēkalā and the bowl Amutacurapi, the heroine Maṇimēkalai returns to Pukār to rejoin her mother and friends, as well as the teacher Aṟavaṇaṉ. From the Buddhist teacher, she learns the miraculous events that will accompany the Buddha's return to earth once again in the year 1616. The precise referent for this date is unclear. It might well represent a calculation based on the assumption that the teaching of the Buddha will last 2,500 years (Lamotte, 1958, 214–215): if the Buddha died circa 480 BCE (or 380 BCE), and the *Maṇimēkalai* was composed in the 5th century CE (404 CE, to be precise) or the early 6th (504 CE), 1,616 years remain before the disappearance of the dharma allows for the appearance of Maitreya (see von Hinüber, 2013, xxix). Aṟavaṇaṉ also instructs the small assembly regarding the life of the previous owner of the miraculous begging bowl; the power of the bowl is activated when Maṇimēkalai receives her first alms from a pious Buddhist woman, and she begins to feed the hungry of Pukār. Utayakumaraṉ renews his pursuit of the young Maṇimēkalai, who in turn employs her magical ability to disguise herself in order to avoid any contact with the prince. Through a case of mistaken identity, the prince is violently killed; Maṇimēkalai is unjustly arrested for her part in the event, but not before she learns that she will one day be reborn as the chief disciple of the next buddha. She is eventually freed by the queen and receives Buddhist instruction from Aṟavaṇaṉ before leaving for Cāvakam to meet the former owner of the miraculous begging bowl (now reborn as the king of Cāvakam). Pukār is meanwhile destroyed a flood, and when Maṇimēkalai returns to southern India, she heads for the western city of Vañci. There she visits a temple erected in honor of her father, Kōvalaṉ, and his wife, and she debates at some length with ten different teachers of non-Buddhist schools. She then travels to Kāñcīpuram, where she orders the king to construct a park near the local Buddhist *caitya* (temple), with shrines honoring the goddess Maṇimēkalā and Amutacurapi, the miraculous begging bowl. Aṟavaṇaṉ arrives to instruct Maṇimēkalai in proper influential reasoning and interdependent origination. The text ends with the young woman vowing to renounce the world.

Sixteen "branch stories" (*kiḷaikkatai*) adorn and complicate the basic narrative briefly outlined above, from the story of the previous owner of the miraculous begging bowl to those of Maṇimēkalai's (and her companions') former lives; five of the lengthiest and most significant of such intertwined subnarratives have been studied at length by P. Richman (1988), with particular focus on Cāttaṉār's sophisticated inversion of classical Tamil poetic themes of love and female beauty. Taken together, the main narrative and branch stories explore not only the possibility of female renunciation (Richman, 1988, 2), but also the unfolding of those beneficial root conditions (Pal. *kusalamūla*) that render one ready to receive the Buddha's teachings, signaled throughout the Tamil text by the central term *ētunikalcci*, literally the arising (*nikaḻcci*) of such beneficial conditions (*ētu*; Monius, 2001, 24–32). Such beneficial conditions are defined in Theravāda literature as non-attachment (*alobha*), lack of enmity (*adosa*), and lack of delusion (*amoha*; Nyanatiloka, 1988, 119–120, 134–140).

Like the (often unconscious) confluence of conditions that render characters throughout Pali narrative literature ready to respond to the Buddha's teachings, from Maṭṭhakuṇḍali (Norman, 1906, 26) to Aṅgulimāla (Hardy, 1967, 250), at critical points throughout the *Maṇimēkalai*, events move along, and the heroine is compelled to act, "because there would blossom for Maṇimēkalai the arising of beneficial conditions, like the fragrance emanating from a flower" (*mā malar nāṟṟam pōl-maṇimēkalaikku ētunikaḻcci etirntuḷatu ātaliṉ*; Caminataiyar, 1981, 27), resulting eventually in her final vow of renunciation. The heroine's final act of withdrawal is not simply the result of a single intention or act of will, but the culmination of many conditions, prerequisite events, and phenomena interwoven across many lifetimes. Perhaps in response to the earlier *Cilappatikāram*'s rather mechanical treatment of karma (Tam. *viṉai*) as straightforward cause and effect – characters there consistently respond to tragic events with cries of "I am a slave to bad karma!" (*koṭu viṉai āṭṭiyēṉ*; Caminataiyar, 1978, 482) – the Buddhist *Maṇimēkalai* presents a much more dynamic vision of karma at work in human lives, redefined in terms of the complex (and highly condensed) philosophical discussion of interdependent

origination (Tam. *cārpiṉ tōṉṟi*; lit. the appearance of dependent things) in the final chapter (Caminataiyar, 1981, 369; Monius, 2001, 65–77).

While the historical communities that produced and transmitted the *Maṇimēkalai* may never be identified precisely, the story of the maturation and manifestation of a young woman's karmic destiny as the chief disciple of the future buddha offers insight into the possible future communities imagined by Cāttaṉār and his audiences; indeed, the temporal thrust of the narrative is entirely forward-looking, bringing the branching stories of the past through the present and propelling them forward toward a soteriologically rich future (Monius, 2001, 88–108). The future community of Buddhists envisioned by the *Maṇimēkalai* is unique in many ways, beginning with the specific karmic trajectories that will lead to membership in that community. The coming buddha, for example, is clearly identified with Kōvalaṉ's (Maṇimēkalai's father's) ancestor, a merchant rescued from a shipwreck nine generations ago by the goddess Maṇimēkalā (Caminataiyar, 1981, 347–348). Maṇimēkalai, Kōvalaṉ and his wife Kaṇṇaki, and Maṇimēkalai's grandfather will all gather around this future buddha, with Maṇimēkalai herself reborn as his chief disciple (Caminataiyar, 1981, 238–239). This coming of the next earthly buddha looms large in the world of the *Maṇimēkalai*, for his arrival is pinpointed to "1616" (Tam. *īr eṇṇūṟṟōṭu īr eṭṭu āṇṭil*, lit. in twice eight with twice eight hundred years; Caminataiyar, 1981, 138). While the precise referent of this date is unclear, the reemergence of a living buddha in the world lies not in some unimaginably distant future, but close at hand; the characters who populate this Tamil narrative of a young girl's renunciation will form the core community around the teacher, bringing the landscape of southern India traversed in the *Maṇimēkalai* to the Buddhist heartland of Kapilavastu (Tam. Kapilaiyam), Magadha (Tam. Makatam), and Gandhāra (Tam. Kāntāram).

While so much regarding the *Maṇimēkalai* remains historically unclear – the communities of thought and practice that produced and transmitted Cāttaṉār's text, the precise nature of the impending coming of the buddha and the heroine's primary role in that future community – the *Maṇimēkalai* itself demonstrates the significance of sophisticated, ornate narrative poetry in the articulation of a distinctly Buddhist identity in a multilingual, multireligious South Indian landscape.

At least four centuries separate the *Maṇimēkalai* from the only other remaining Buddhist texts composed in Tamil, the 11th-century *Vīracōḻiyam* attributed to Puttamittiraṉ (Skt. Buddhamitra, "Friend of the Buddha") and its commentary by Peruntēvaṉār (a Tamil equivalent of Mahādeva; Kovintaraja Mutaliyar, 1970). Rather than a work of poetry itself, in the manner of the *Maṇimēkalai*, the *Vīracōḻiyam* outlines a terse, 181-verse technology of literary culture, a theoretical treatment of Tamil grammar and poetics named for the author's royal patron, Vīracōḻaṉ or Vīrarācēntiracōḻaṉ (Skt. Vīrarājendra), who ruled briefly in the third quarter of the 11th century (1063/1065?–1069/1070?). Neither the text nor the commentary has ever been translated into English, but both have been studied by scholars of Tamil linguistics (Subrahmanya Sastri, 1934; Veluppillai, 1971, 2002; Meenakshi, 1983–1984; Canmukam Pillai, 1998), poetics (Manuel, 1980; 1997), and religion (Monius, 2001, 116–155).

The *Vīracōḻiyam* identifies the language and poetic tradition it describes as "the cool Tamil that was . . . heard by Akattiyaṉ at the side of Avalōkitaṉ of beautiful qualities" (*āyum kuṇattu avalōkitaṉ pakkal akattiyaṉ kēṭṭu . . . taṇ tamiḻ*; Kovintaraja Mutaliyar, 1970, 1), thus claiming that the great sage Akattiyaṉ (Skt. Agastya) – portrayed as master of both Tamil and Sanskrit throughout South Indian literary tradition – learned Tamil from the great bodhisattva, Avalokiteśvara (Tam. Avalōkitaṉ). Elsewhere, the *Vīracōḻiyam* describes the language it theorizes as "the true Tamil of Avalōkitaṉ whose glory shines in a thousand ways" (*āyiram vitattil poliyum pukaḻ avalōkitaṉ mey tamiḻē*; Kovintaraja Mutaliyar, 1970, 86).

What is most striking about Peruntēvaṉār's commentary are the many poetic examples it provides, most from sources as yet unidentified, that collectively yield a tantalizing glimpse of a perhaps much larger Buddhist literature composed in Tamil. Multiple references, for example, are made to the *pōti* (Skt. *bodhi*) tree, to many celebrated scenes from the Buddha's previous lives as bodhisattva, and to the (now-lost) Tamil Buddhist narrative poem, the *Kuṇṭalakēci*. Citations from non-Buddhist Tamil works – such as the celebrated 5th-century compendium of moral maxims, the *Tirukkuṟaḷ* – focus on Buddhist-friendly themes, such as the transience of human attachment and the misery of undisciplined passion.

Relatively few (Vijayavenugopal, 1979; Veluppillai, 2002; Monius, 2001; Monius, 2013) have considered the *Vīracōḻiyam* and its commentary as particularly Buddhist texts. Yet considering the text and its commentary not simply as discrete moments in Tamil literary history, but as contributions to wider currents of Buddhist literary and theoretical innovation across South Asia, serves to highlight the particularly Buddhist elements of each in multiple ways.

Puttamittiraṉ, for example, both theorizes Tamil language as taught to the great sage Agastya by Avalokiteśvara and dedicates his work to the ruling Chola monarch at a time when Buddhist monks writing in Pali increasingly identify themselves (or are identified by others) as "Coḷiya" or "Ḍamila," belonging to the Chola or Tamil region or realm (*coḷaratthe, ḍamilaratthe*; Monius, 2001, 121–128). The precise historical reasons for the emergence of monks identified as "Coḷiya" or in some manner related to the "Ḍamila country" remain unclear, but the *Vīracōḻiyam*, by theorizing the local language of "Coḷiya" monks while attributing that language's origins to Avalokiteśvara makes "Ḍamila" properly Buddhist.

Peruntēvaṉār's *Vīracōḻiyam* commentary – particularly in its citing of illustrative verses – does nothing less than forge a Tamil literary tradition compatible with both the linguistic and poetic rules described in the root text and the basic teachings of Buddhism (Monius, 2001, 137–155). In an era during which Tamil Śaiva Brahman commentators on the *Tolkāppiyam* significantly narrow the scope of Tamil literature to the classical poetic anthologies on themes of love and war, Peruntēvaṉār draws on a far wider genre of literary forms, united by their evocation of noninjury, compassion, the agony of passion unchecked, and the glories of the bodhisattva and Buddha. An anonymous poet cited by Peruntēvaṉār sings as an example of the two-foot metrical line:

> *poruntu pōtiyil*
> *irunta mātavar*
> *tiruntu cēvaṭi*
> *maruntum ākumē*
>
> The great ascetic
> sitting properly under the bodhi tree
> became the great physician
> of perfect red-lotus feet. (Kovintaraja Mutaliyar, 1970, 124)

The Buddha is the "protector of precious life" (*ār uyir kāval*; Kovintaraja Mutaliyar, 1970, 114), and "the king who taught the flawless teachings" (*kōtu illā aṟam parkarnta... kōṉ*; Kovintaraja Mutaliyar, 1970, 127). He cites a full verse from the now-lost *Kuṇṭalakēci*, one of the "five great poetic works" (*aimperuṅkāppiyam*) of Tamil literary tradition (Kovintaraja Mutaliyar, 1970, 125). As above, the source of the many verses extolling the compassionate deeds of the bodhisattva and the majesty of the Buddha remain unknown; other texts, well-known in medieval Tamil literary circles, such as the *Tirukkuṟaḷ*, are cited only in part, focusing on the virtues of self-restraint and generosity. In illustration of the poetic ornament known as *parimāṟṟam* (Skt. *parivṛtti*), for example – expressing a nonliteral exchange of ideas or things – Peruntēvaṉār cites *Tirukkuṟaḷ* verse 1183, dealing with the pallor (Tam. *pacalai*) brought about by the separation of husband and wife:

> *cāyalum nāṇum avar koṇṭār kaimmāṟā*
> *nōyum pacalaiyum tantu*
>
> He took my beauty and shame
> and gave me in exchange only sickness and
> pallor. (Kovintaraja Mutaliyar, 1970, 219)

As an example of the ornament expressive of objection or denial (Tam. *taṭaimoḻi*; Skt. *ākṣepa*), Pertuntēvaṉār again cites the celebrated *Tirukkuṟaḷ* on the angst of lovesick separation:

> *cellāmai uṇṭēl eṉakku urai maṟṟu niṉ*
> *val varavu vāḻvārkku urai*
>
> Tell me only if he is not going;
> of quick return, tell only those who can survive
> such sorrow. (Kovintaraja Mutaliyar, 1970, 210)

Through Peruntēvaṉār's commentary, Tamil literary tradition thus evinces praise for the Buddha, wonder at his awesome acts as bodhisattva, and wariness about the throes and passions of love between men and women. Tamil language proves wholly compatible with Sanskrit, Tamil literature wholly compatible with Buddhist values.

Quite striking in the *Vīracōḻiyam* commentary is the complete absence of any mention of the *Maṇimēkalai*, a text that has emerged as so central to contemporary scholarly efforts to reconstruct the history of Buddhism in Tamil-speaking southern India. As noted above, Peruntēvaṉār cites the (now-lost) *Kuṇṭalakēci*, believed to have been a Buddhist response to the long 9th-century Jain narrative *Nīlakēci* (itself filled with anti-Buddhist argument and invective). Various non-Buddhist sources in Tamil acknowledge or cite verses from other seemingly Buddhist texts unnoticed by the *Vīracoḻiyam* commentator, among them the *Pimpicārakatai* (Skt. *Bimbisārakathā* [The Story of King Bimbisāra]; Chakravarti, 1936, 71), the *Cittāntattokai* (Skt.

It remains a mystery why the *Maṇimēkalai*, along with other Buddhist works in Tamil, stands outside the *Vīracōḻiyam*'s Tamil Buddhist literary tradition that includes the *Kuṇṭalakēci* and poetic verses to the Buddha and bodhisattva, even non-Buddhist works such as the *Tirukkuṟaḷ*. What communities of Tamil-speaking Buddhists gave rise to Cāttaṉār, Puttamittiraṉ, and Peruntēvaṉār? What communities of reception enabled the *Maṇimēkalai* and the *Vīracōḻiyam* to survive, while other texts vanished? What relationship, if any, do these extant texts bear to the scattered archaeological remains of Buddhist monuments, institutions, and images in the Tamil-speaking region of southern India? Answers to such questions have thus far remained elusive.

Local Literatures: Nepal

The present article treats the literary heritage of the Indic Buddhist tradition surviving in the Kathmandu Valley, that is, "historical" Nepal. (The country known today as Nepal was only formed in the wake of the conquest by the Gorkhas in the mid-18th cent., and it owes its name to that of the valley.) It focuses on works composed in the Kathmandu Valley, first in Sanskrit alone and since the 17th century increasingly also in the local vernacular – Newari, a Tibeto-Burmese language that is heavily Sanskritized in its literary form. However, Indian Buddhist texts that play a major role in this tradition are also considered – a necessity given the great continuity between these two arenas of literary production.

Buddhism in historical Nepal dates back some two millennia and persists to the present day as the sole remnant of Indic Buddhism, surviving in its original South Asian setting with Sanskrit as its sacred language. It is here that the vast majority of the Buddhist Sanskrit literature has been preserved. In addition to Mahāyāna *sūtra*s, *tantra*s, and (tellingly few) segments of the Vinaya, all attributed to the Buddha (or a buddha) and hence technically *buddhavacana*, this corpus also includes Buddhism's rich narrative literature, exegetical texts, devotional works, ritual manuals, and so on. Many of these works reached the West through Brian Houghton Hodgson, a colonial officer who served in Kathmandu from 1820 to 1843 first as British Assistant Resident and then for the final ten years as British Resident. During his time in Nepal, he dispatched over four hundred manuscripts, some of them newly commissioned copies, to England, India, and to Paris. The manuscripts dispatched to Europe served as the basis for the first academic study of Buddhism in the West, undertaken by E. Burnouf and published under the title *Introduction à l'histoire du Buddhisme indien* (1844). In addition, R. Mitra (1882) published a description of the manuscripts sent by Brian Houghton Hodgson to the Royal Asiatic Society of Bengal at Calcutta. The focus of this collaborative effort has been on the narrative literature, and the assembled summaries serve still as a useful starting point for surveying the literature preserved and partially composed in Nepal. A further important reference tool is the select catalogue of the Buddhist holdings of the National Archives of Nepal published as part of its multivolume *Bṛhatsūcīpatra*.

Following in the footsteps of Brian Houghton Hodgson, much of the corpus of Buddhist (and also non-Buddhist) manuscripts extant in Nepal has been microfilmed since the early 1970s by the Nepal-German Manuscript Preservation Project (NGMPP). Supplementing this, there are other microfilm and digital archives of Nepalese Buddhist manuscripts, such as the digitalized holdings of the Āśā Saphū Kuthi (Āśā Archive; see also Yoshizaki, 1991; 2002) and the microfilm collections of the Buddhist Library in Nagoya, Japan (Takaoka, 1981) and of the – in the meantime disbanded – Institute for Advanced Studies of World Religions (IASWR) at Stony Brooks, New York (which is based on the private collection of the late Mana Bajra Bajracharya from Kathmandu and now kept at the University of Virginia). Moreover, in an ongoing effort, the Digital Buddhist Sanskrit Canon initiative is digitally inputting the Sanskrit literary heritage preserved in Nepal (and also elsewhere), and these texts can be accessed online. Even though these projects and initiatives have greatly facilitated access to the primary sources, research on the literature of the Nepalese tradition has been overshadowed by mining the Nepalese archive for earlier texts of the Indian tradition that were presumably not authored in Nepal. In particular, works written in the local vernacular, Newari, have been neglected (Malla, 1982), and research into this vernacular Buddhist literature has hardly begun.

It is important to bear in mind that Nepalese Buddhism is in its origins not a distinct tradition. Rather, it participated in the Indian literary heritage, and local forms of literary production did not dislodge so much as supplement that heritage, which has furnished the basis of the Nepalese tradition. Accordingly, Indian Buddhist scriptures have continued to be copied and recopied, and – with the advent of printing in Nepal in the second half of the 20th century – they have also come to be printed locally. The center stage is taken by the nine Mahāyāna *sūtra*s, which form a quasi-canonical set of scriptures known as the *Navagrantha* (Nine Works):

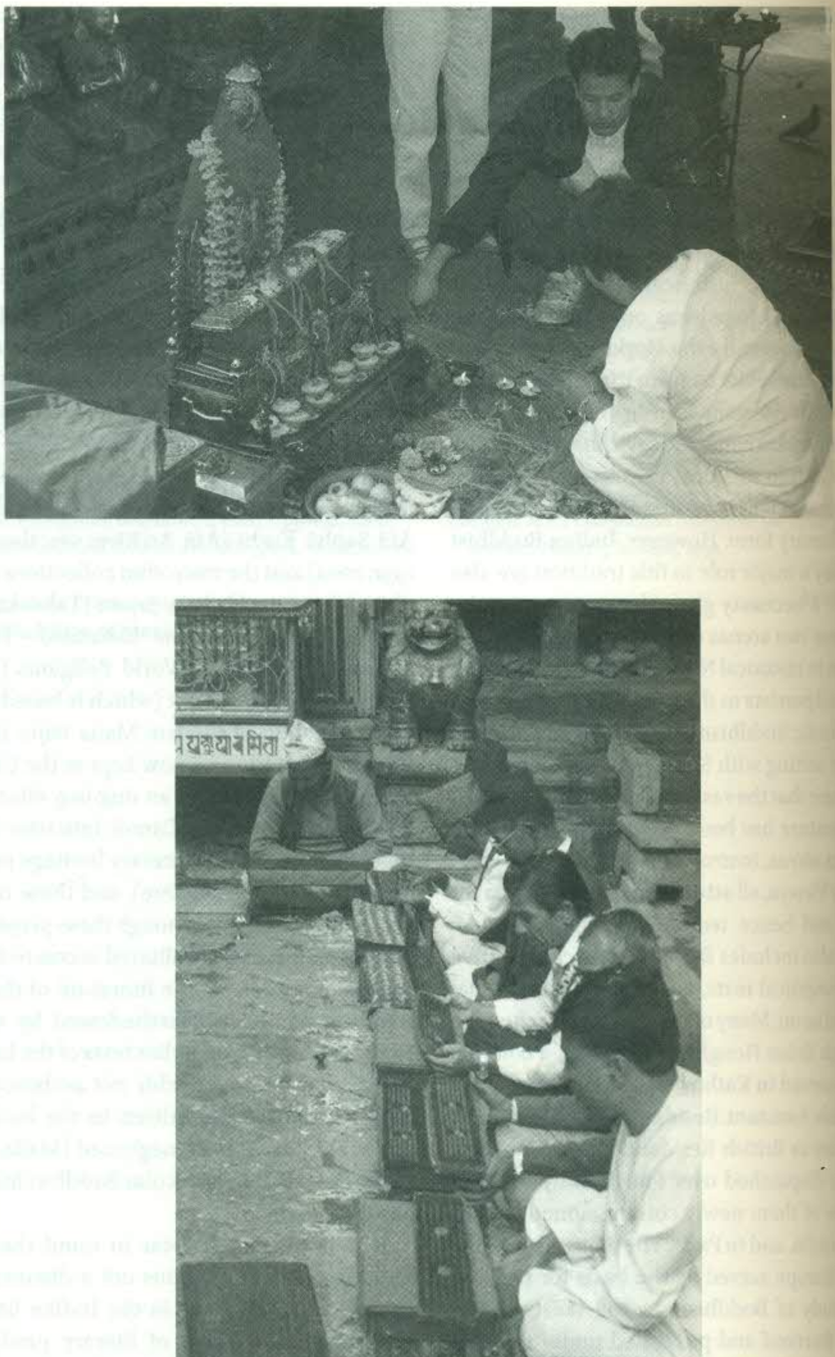

Fig. 1 and Fig. 2: Worship of the *Aṣṭasāhasrikāprajñāpāramitā* (Perfection of Wisdom in Eight Thousand Lines) manuscript of Kvā Bāhā Monastery in Patan in May 2010. The manuscript is written in gold ink on specially treated dark-blue paper. The lose pages are kept between their two metal book covers as the priest worships them on the purpose-built altar as an embodiment of the goddess of the perfection of wisdom, Prajñāpāramitā. Afterward the text is split up into different sections and allocated to the priests convened for this purpose, who each read aloud the pages allotted to them. In this way, they collectively recite the text in its entirety, which serves to sonically manifest the goddess. (photos by author)

1. *Aṣṭasāhasrikāprajñāpāramitā* (Perfection of Wisdom in Eight Thousand Lines);
2. *Gaṇḍavyūha* (which features also as a portion of the, in Nepal unknown, *Buddhāvataṃsaka* collection);
3. *Daśabhūmīśvara* (also known as *Daśabhūmikasūtra*, which likewise occurs also as part of the *Buddhāvataṃsaka* collection);
4. *Samādhirāja* (King of *Samādhi*s);
5. *Laṅkāvatāra* (Entrance to Laṅkā);
6. *Saddharmapuṇḍarīka* (*Lotus Sūtra*);
7. *Tathāgataguhyaka* (commonly identified as the *Guhyasamājatantra* rather than the *sūtra* cited under this name in the *Śikṣāsamuccaya*);
8. *Lalitavistara* (The Expansive Sport, A Life of the Buddha); and
9. *Suvarṇa(pra)bhāsa* (Golden Light).

In an alternative (more tantric) version of this configuration (which may have its roots outside Nepal), the *Pañcarakṣā* and *Mañjuśrīnāmasaṅgīti* feature instead of the *Tathāgataguhyaka* and the *Suvarṇa(pra)bhāsa* (Tuladhar-Douglas, 2006, 144–147).

These canonical works are not so much studied for their content as liturgically recited or put to other ritual uses. For instance, when the three jewels of Buddhism (i.e. Buddha, dharma, and saṅgha), are worshipped in *maṇḍala* configuration as happens at the outset of many rituals, the *Navagranthas* are worshipped as the embodiment of the jewel of the dharma. For this they are arrayed in a *maṇḍala* configuration, with the *Aṣṭasāhasrikāprajñāpāramitā* in the center as the most important text. In manuscript form, the *Navagrantha* also serve as physical objects of worship that may be lavishly produced and ornamented with delicate illuminations (Kim, 2013). More specifically, they may be treated as deity icons, as happens particularly in the case of *Aṣṭasāhasrikāprajñāpāramitā* manuscripts, which are consecrated and worshipped as embodiments of the goddess Prajñāpārimitā (see fig. 1). The cult of the *Aṣṭasāhasrikāprajñāpāramitā* continues prominently at the Kvā Bāhā Monastery in Patan, where Vajrācārya priests regularly recite this voluminous text by divvying it up among them, with each one taking charge of a different section (see fig. 2). Further important texts for ritual recitation are the tantric *Mañjuśrīnāmasaṃgīti* and *Pañcarakṣā*.

In addition to the Mahāyāna scriptures mentioned here, there is also a large corpus of Indian tantric scriptures and ancillary works (Moriguchi, 1989), which form the basis of tantric Newar Buddhism and continue to inform its ritual and initiatory practices even now. Notwithstanding the distinction of the *Guhyasamājatantra* as one of the *Navagrantha*, later *tantra*s such as the *Saṃvarodayatantra*, the *Saṃpuṭodbhavamahātantra*, the *Vajravārāhīkalpatantra*, the *Hevajratantra*, and the *Caṇḍamahāroṣaṇatantra* are more prominent. Classified as *yoginītantra*s and dedicated to deities like Cakrasaṃvara and Vajravārāhī, they play a central role in the initiatory tantric practice among the Newars. As the large number of manuscripts bears out, even more popular than such full-fledged *tantras* are *dhāraṇī* texts (and *dhāraṇī* collections), which are likewise *buddhavacana* and often identified as *sūtra*s in the title. Embedded in a framing narrative, they typically provide spells to invoke a particular goddess (or goddesses, or a buddha) in order to secure the specific blessing associated with that deity, such as longevity (in the case of Uṣṇīṣavijayā or the buddha Aparimitāyus), freedom from planetary disturbance (Grahamātṛkā), protection (*pañcarakṣās*), or wealth (Vasudhārā). While these *dhāraṇī sūtras* predate the disappearance of Buddhism in India around the 13th century, and are not of Nepalese origin, their forms of employment in ritual are often specifically local. Thus, the above-mentioned goddesses form the core of the elaborate sequence of old-age rituals developed among the Newars (von Rospatt, 2014). Similarly, the *Saptavārapāṭha*, a relatively late Nepalese compilation prominent in contemporary practice, gives a different *dhāraṇī* practice for each day of the week (and the planet it stands for), starting with Vasudhārā (Sunday), continuing with Vajravidāriṇī (Monday), Gaṇapatihṛdaya (Tuesday), and Uṣṇīṣavijayā (Wednesday), and ending with Grahamātṛkā (Saturday).

Beyond tantric and non-tantric Mahāyāna scriptures, the Nepalese tradition is heir also to the rich Indian Mahāyāna literature that technically is not *buddhavacana* (and thus not scripture per se). While the more scholastic literature of the Madhyamaka and Yogācāra schools (incl. its Abhidharma precursors) lost the traction it once may have had as suggested by the survival of such works as Yaśomitra's *Abhidharmakośavyākhyā* or the *Bodhisattvabhūmi*, the tantric literature as exemplified by the works of Abhayākaragupta (12th cent.) and Advayavajra continues to occupy an important place in Nepalese Buddhism – notable examples are Abhayākaragupta's *Niṣpannayogāvalī* and *Vajrāvalī* (see below) with their treatment of *maṇḍala*s and Advayavajra's collection of prescriptive texts, including the *Kudṛṣṭnirghātana* with its *Ādikarma* section on the

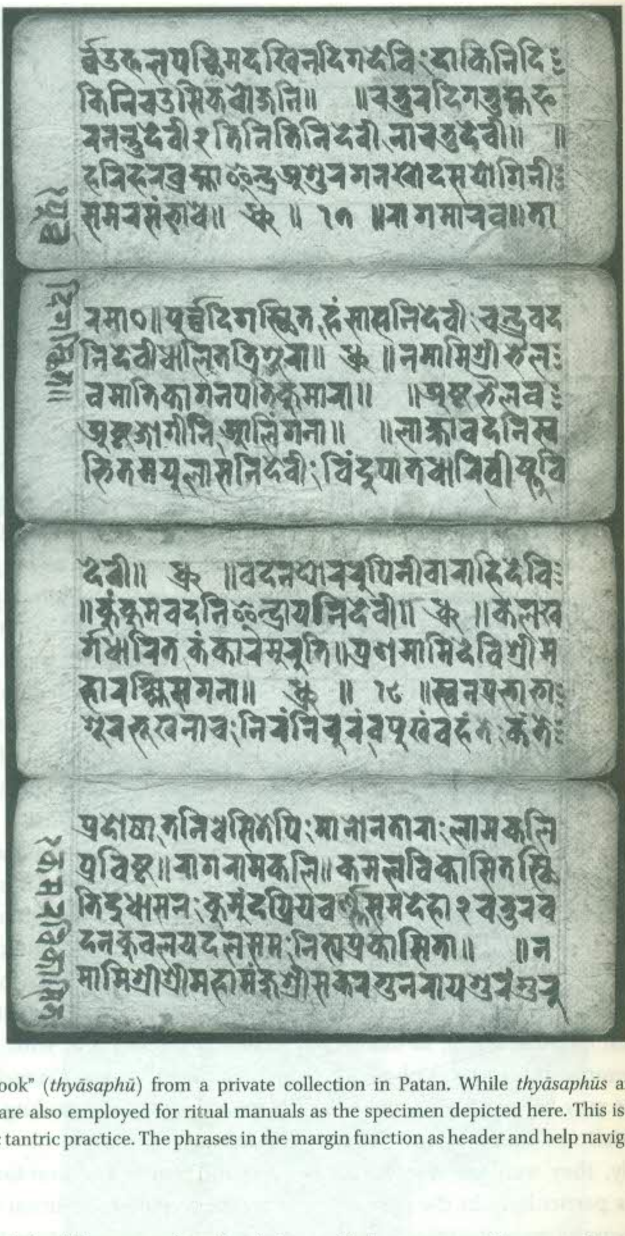

Fig. 3: Undated "folding book" (*thyāsaphū*) from a private collection in Patan. practices of "beginner" bodhisattvas for the laity (Takahashi, 1993). Closely related to this *Ādikarma* section are Anupamavajra's *Ādikarmapradīpa* (composed in 1098 CE; La Vallée Poussin, 1898) and the *Ādikarmavidhi*, ascribed to a certain Taṭākaragupta (?; NGMPP A 1165/7). The prescriptions found in these texts closely match practices still popular among Newar Buddhists, and thus support the assumption that many features of this tradition are of greater antiquity than commonly presumed.

Notwithstanding the impact of such Indian works, far more important has been the literature that the Buddhists of Nepal produced themselves to suit their needs and shape their tradition. This process began already before Buddhism vanished from India. The most influential is the *Kriyāsaṃgrahapañjikā*, authored by Kuladatta in the 12th (or possibly 11th) century in the Kathmandu Valley. While this foundational work foregrounds the establishment of a monastery, it is in essence a collection (*saṃgraha*) of diverse rites (*kriyā*) that relate in various ways to monasticism, including the rite of ordination (*pravrajyā*), as current in Nepal at the time of Kuladatta. These rituals continue to play a central role in the Nepalese tradition, with the *Kriyāsaṃgrahapañjikā* functioning till this day as the principal source that informs such practice. Both its encyclopedic character and its content (note e.g. the closely matching treat-

āsaṃgrahapañjikā function-
principal source that informs
encyclopedic character and
the closely matching treatment of the consecration ceremony [Tanemura, 2004; von Rospatt, 2010]) suggest that Kuladatta's work is grounded in the same tradition as the texts of Abhayākaragupta, which have an enduring hold on the Newar tradition. This is supported by the fact that another Nepalese text, which is closely related to Kuladatta's *Kriyāsaṃgrahapañjikā* – namely, the *Ācāryakriyāsamuccaya* by Jagaddarpaṇa – is grafted onto Abhayākaragupta's *Vajrāvalī*, incorporating most of it verbatim, while deviating and expanding on it as needed, for instance, by inserting the treatment of renovation (*jīrṇoddhāra*) in the section on honorific offerings (*argha*). Attesting to the continuity between these two Nepalese texts and their Indian precursors, they and a further important text authored in Sanskrit in the Kathmandu Valley before the 14th century – namely, the *Hiraṇyamālādaśakriyāvidhi* – were translated into Tibetan and form part of the Tanjur collection. It is also noteworthy that some celebrated Indian masters, such as Atīśa (11th cent.), Vibhūticandra (12th cent.), and Vanaratna (15th cent.), came to reside in Nepal, where they cooperated with local scholars and produced significant tantric works, which were likewise translated into Tibetan.

The mentioned Nepalese Sanskrit texts have themselves functioned as precursors for the countless ritual handbooks written after the 15th century in a characteristic mix of Newari and Sanskrit. These handbooks are compilations written by Vajrācārya priests for their own purposes and then handed down in the tradition. Usually, these are not new compositions but draw on other handbooks, while allowing some scope for innovative adaptations, for instance, the choice of *stotras* (hymns) to be recited in praise of the worshipped deities. Many such handbooks treat a common stock of rituals that Vajrācārya priests perform in their function as

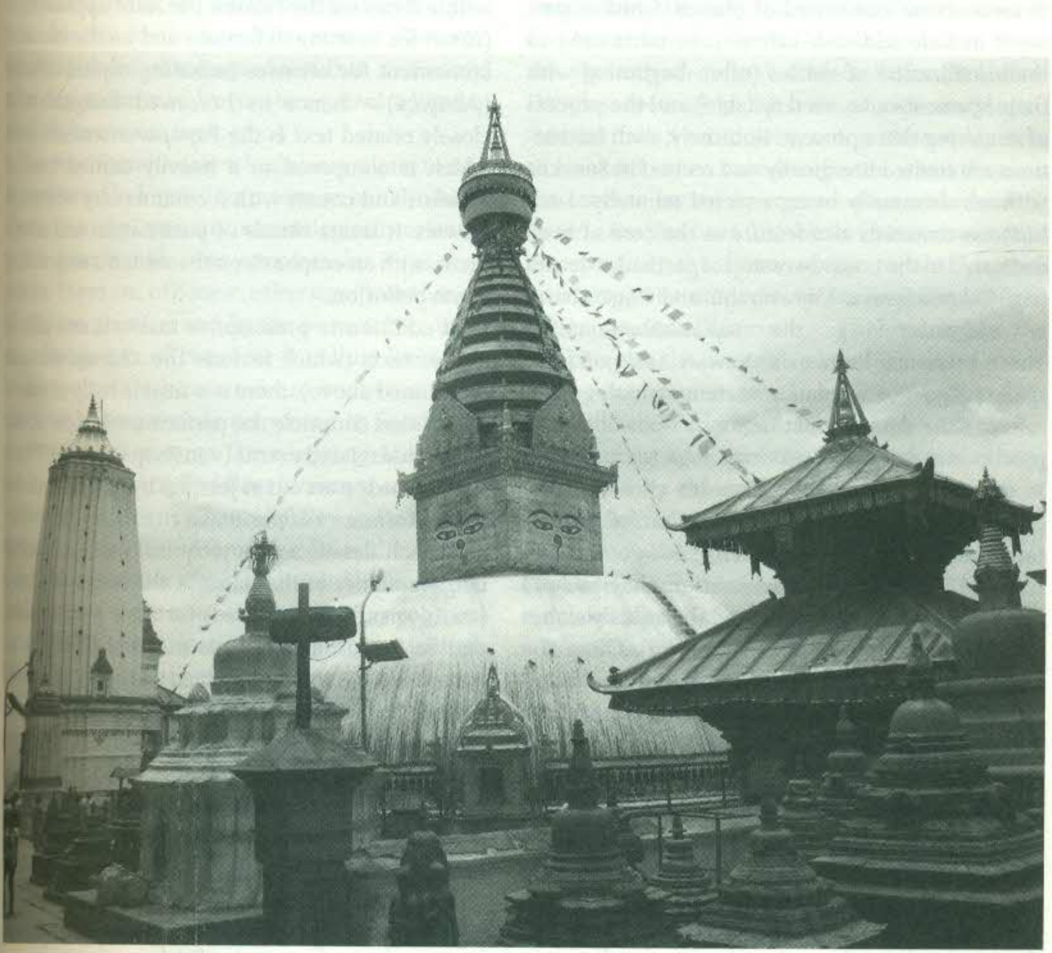

Fig. 4: The Svayambhū Caitya of Kathmandu on a monsoon-drenched day in July 2013, viewed from the northwest, with the two-tiered temple of Hāritī and other shrines in the foreground. commissioned priests (*purohita*) for their clients (*yajamāna*). Three arenas of ritual activity stand out, namely the following:

1. the establishment and consecration of a new *caitya* or image (von Rospatt, 1999; 2010; in line with the *Kriyāsaṃgrahapañjikā*);
2. life-cycle rituals (*saṃskāra*) that – while originally Brahmanical – are performed in this tradition in a wholly Buddhist idiom; and
3. death rituals including post-mortuary offerings of rice balls (*piṇḍa*) to the ancestors – they relate to the tantric Durgatipariśodhana cult, the prominence of which is also attested by the many *Durgatipariśodhanadhāraṇī* manuscripts and printed versions in circulation.

In the ritual handbooks, the instructions to perform specific ritual acts are generally written in Newari, while the texts to be recited are Sanskrit citations taken from standard works. In addition to invocations and verses of praises, Sanskrit passages include *sādhana* instructions pertaining to the visualization of deities (often beginning with their *bījamantra*, i.e. seed syllable) and the process of rendering them present. Routinely, such instructions are treated liturgically and recited in Sanskrit without necessarily being enacted mentally. Such *sādhana* materials also feature at the core of texts dedicated to the tantric worship of particular deities (e.g. Cakrasaṃvara, Vajravārāhī, and Yogāmbara) or *maṇḍalas* (e.g. the *vajradhātumaṇḍala*). These texts are known in Newari as *deguli* (also spelled *deguri*), a word of uncertain etymology that refers to the detailed instructions of how a tantric practitioner is to perform deity yoga (*devatāyoga*) in order to generate himself as his chosen awakened deity, in the Newar tradition by default Cakrasaṃvara (see Yamaguchi, 2005), through complex processes of visualization that include the elaborate use of mantras and the equally elaborate display of hand gestures (*mudrā*). Often the word *deguli* is qualified in the title as "oral communication" (*mukhākhyāna*). The most sustained study of this genre is a series of articles by Moriguchi (1982; 1983; 1984; 1987; 1995) dedicated to the *Vajradhātumukhākhyānadegurividhi*, which follows the section on deity yoga in the *Kriyāsaṃgrahapañjikā* almost verbatim. Closely related to the *deguli* texts are the tantric songs (*caryāgīti*; New. *cacā*) chanted in secrecy as part of the worship of initiatory deities. Often they are sung in accompaniment to tantric dances, which are likewise recorded in handbooks, entitled *padasādhanas* because the dance steps (*pada*) effect the deities' presence (see fig. 3). As with the *deguli* manuals, most of the tantric songs are dedicated to a specific deity and have that deity's iconography as their subject matter. Controversially, given the initiatory character of this practice, anthologies of these songs have been printed and privately distributed (but not officially published) in contemporary Nepal, but a comprehensive text-historical and musicological study of these materials remains an important desideratum. There are also other genres of the ritual literature produced in Nepal that await study. For instance, there is a prominent body of texts entitled *pārājikās*, dedicated to particular Buddhist deities – notably Mañjuśrī, Lokeśvara, Tārā, and Vajrasattva – that has as yet been hardly noticed (but see Bapat, 1977–1978). This genre, despite the usage of the same terminology, does not refer to the four cardinal transgressions (*pārājikā*) entailing automatic and irreversible loss of monastic status, but rather treats lay practices with a focus on the related rituals of appeasement (*śānti*) for averting ill fortune and on the rituals of atonement for offenses including capital offenses (*pārājikā*) – hence its borrowed designation. A closely related text is the *Pāpaparimocananirdeśa*, which is composed in a heavily tainted form of Sanskrit and comes with a commentary written in Newari. It treats rituals of purification and atonement, with an emphasis on the customs negotiating death pollution.

In addition to prescriptive manuals and related tantric texts (which include the *dhāraṇī* manuals mentioned above), there is a sizable body of manuscripts that chronicle the performance of particular rituals and related events (von Rospatt, 2002). Often, such records start out as jottings by priests ahead of the performance of particular rituals, in which they note such details as the technical name of the ritual, the names of the patrons, the auspicious time (astrologically determined) for their performance, and so forth. Such records may subsequently be consolidated into sustained longer historical records devoted to a single shrine or deity, such as the Svayambhū Caitya of Kathmandu (see fig. 4), the Vajrayoginī temple above Sankhu, and the Lokeśvara image of Bungamati village. As exemplified by the accounts chronicling the renovations of Svayambhū in the mid-18th century (von Rospatt, forthcoming), such sources can draw on related works and incorporate mythological materials, ritual prescriptions, and so forth – thus making for a more sophisticated and complex form of historiography. Usually, however, such ritual records consist of basic notes covering a range of ritual events, which the individual

Such historical records supplement the large archive of documents and stone inscriptions pertaining to Buddhist temples and monasteries, which record their establishment or renovation, or particular donations (Bledsoe, 2004). Further sources for the history of Buddhism in Nepal can be manuscript colophons and commemorative inscriptions on commissioned scroll paintings and on other religious artifacts. A similar source can be architectural drawings, such as those preserved for the Svayambhū Caitya (Kölver, 1992), which record the building's outline and dimensions for a given time and may also include further historical information. Such drawings have their roots in *vāstuśāstra* (architectural) and ritual literature (Roth, 1980) and may be used when building or rebuilding *caityas* (as *stūpas* are known in the Newar tradition) or temples. Related to this are the numerous manuscripts with iconographic line drawings of Buddhist deities and other depictions used by painters (*citrakār*) and in ritual (Bühnemann, 2008; 2012).

The ritual literature sketched above relates to rituals performed by Vajrācārya priests on behalf of their clients, or to the initiatory, soteriologically oriented tantric practice, likewise overseen by Vajrācārya priests. There are, of course, other significant arenas of religious practice, and by the same token, there are other genres of Nepalese Buddhist literature. Most prominent is the extensive narrative literature, which was anonymously composed in Sanskrit in roughly the 15th century. These texts constitute the last layer of Sanskrit Buddhist literature composed in South Asia. For the study of Newar Buddhism, they are of particular interest insofar as they reflect many characteristics of this tradition. Unlike the ritual literature, these narrative works have received considerable scholarly attention, starting with R. Mitra (1882), though there are still numerous texts of this rich genre that await proper study. The *avadāna* section of S. Matsunami's catalogue (1965, 213–244) offers a comprehensive overview, though it does not differentiate between Nepalese works and their Indian precursors. A good summary of the research (also for non-Japanese speakers) can be found in K. Okano's descriptive bibliography of Sanskrit narrative literature (1998, esp. 185–241), although it omits the *Guṇakāraṇḍavyūha* (see below) and is also otherwise not complete.

Most of these texts are *avadānas* or collections of *avadānas*, typically identified in the title as *avadānamālā* (garland of heroic legends) or *avadānakathā* (tale of heroic legends). Often, these include tales (*kathās*) that refer to the temporary lay vows (*vratas*) which Nepalese Buddhists may observe on new-, half-, and full-moon days or on other occasions (Lewis, 2000). Generally, such tales provide an account of the past performance of a particular *vrata*, which features heroic protagonists, attests to the efficaciousness of the vow, and may include an etiological explanation of its origins. While they often draw on earlier forms of Indian *avadāna* and Buddhist *jātaka* literature (notably the *Avadānaśataka*, the *Divyāvadāna*, the *Jātakamālā* literature, and Kṣemendra's *Bodhisattvāvadānakalpalatā*), they differ in style (simple verses in *anuṣṭubh* meter predominate) and emphasis, and there are also entirely novel compositions. Central are standard Mahāyāna themes such as the generation of *bodhicitta* (i.e. the aspiration to obtain buddhahood) and self-sacrifice as exemplified by the hugely popular *Maṇicūḍāvadāna*. There are also certain formal characteristics (Tuladhar-Douglas, 2006, 38–52) that set this literature apart from its Indian precursors, such as the employment of a shared outer narrative frame, which features the teacher Jayaśrī in conversation with the king Jinaśrī *alias* Jineśvarī. This outer frame mirrors (and incorporates) the frame of the monk Upagupta instructing the emperor Aśoka, well-known from Indian *avadāna* literature, and helps to bridge the gap between the listener and the embedded narrative, so the listener can situate herself or himself in the world evoked by the text in question. The narrative Buddhist literature treated here has also been influenced by the sprawling purāṇa literature of the Hindu traditions, with which Buddhism in the Kathmandu Valley has always coexisted. One of the Nepalese Buddhist works to be introduced below is even identified as a purāṇa in the title of its extended versions. Conversely, literary developments in the Nepalese Hindu fold, such as the formation of the *Svasthānīvratakathā* (Birkenholtz, 2010) and the *Pradyumnaprabhāvatī* legend (Brinkhaus, 1987), also owe to local Buddhist influence.

Several of these Nepalese *avadānas*, *avadāna* collections, and other texts have been edited, translated, and studied. A prominent example is the *Bhadrakalpāvadāna* (Tatelman, 1998). It covers the life story of the Buddha starting with the delivery of his first teachings at Sarnath and ending with his visit home in Kapilavastu and his subsequent departure to Svayambhū in the Kathmandu Valley, a move that serves to tie the narrative to the

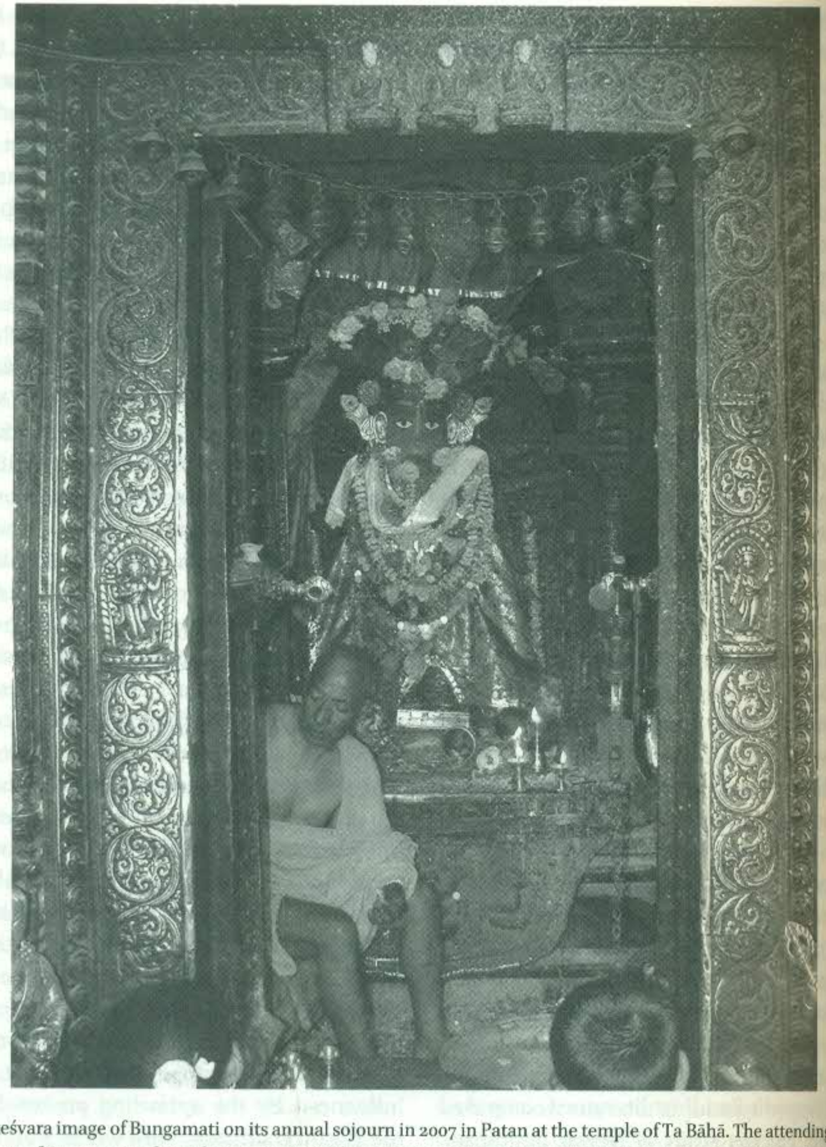

Fig. 5: The Lokeśvara image of Bungamati on its annual sojourn in 2007 in Patan at the temple of Ta Bāhā. The attending priest (pāñju) is from the village of Bungamati where the image is based, hence its local name Bunga-dyo. (photo by Manik Bajracharya)

historical Nepal. The text draws on the *Mahāvastu* and other Indian sources, but its extensive narration of the fate of the Buddha's wife Yaśodharā and the tribulations that she had to suffer once Siddhārtha had left her is an original Nepalese creation and differs from other accounts of Yaśodharā found in the Sanskrit and Pali literature. Arguably, it reflects the anxieties surrounding renunciation in the Nepalese tradition, in which monastic renunciation came to be domesticated and restricted to a caste of married householder monks. Indicative of the intertextuality among Nepalese works of this genre, substantial portions of the *Bhadrakalpāvadāna* are shared with the *Saṃbhadrāvadānamālā*. The *Mahajjātakamālā* (Hahn, 1985) provides another interesting example for intertextual borrowings. Nearly half of it is constituted by the *Karuṇāpuṇḍarīkasūtra*, supplemented by episodes drawn from other sources such as the *Jātakamālā*s of Āryaśūra, Haribhaṭṭa, and Gopadatta. Further select works pertaining to the corpus of Nepalese narrative literature are the *Kalpadrumāvadāmālā*, the *Aśokāvadānamālā*, the *Vicitrakarṇikāvadānamālā*, the *Ratnamālāvadāna* (also known as *Ratnāvadānamālā*; Takahata, 1954), the *Divyāvadānamālā* (which is partially identical with the text established under the name *Divyāvadāna* in the edition of Cowell & Neil, 1886), the *Citraviṃśatyavadāna(mālā)*, the *Dvāviṃśatyavadānakathā*

lā), the *Dvāviṃśatyavadānakathā* (Okada, 1993), the *Kavikumārāvadāna* (Asplund, 2013), the *Kapīśāvadāna* and *Piṇḍapātrāvadāna* (Both, 1995), the *Vratāvadānamālā*, and texts dedicated to specific *vratas* such as the *Ahorātravratakathā* (Handurukande, 2000), the *Lakṣacaityavrataśṛṅgabherīkathā* (Lewis, 2000, 21–48; and Rajapatirana, 1974), the *Aṣṭamīvratakathā*, and the *Vasudhārāvratakathā*.

Two particularly important texts pertaining to the Nepalese Sanskrit Buddhist literature composed in circa the 15th century are the *Svayambhūpurāṇa* and the *Guṇakāraṇḍavyūha*. Though these two share many features of the Nepalese *avadāna* and *kathā* collections, such as the outer narrative frame with Jayaśrī and Jinaśrī, they differ in thrust and are connected to what already in the 11th century were the two principal sites of Nepalese Buddhism, namely, the Svayambhū Caitya and the Lokeśvara of Bungamati, also known as Buṅgadya, Karuṇāmaya, or Matsyendranāth (see fig. 5). The *Guṇakāraṇḍavyūha* is the Newar adaptation of a much earlier Mahāyāna *sūtra*, namely, the *Kāraṇḍavyūha* (Tuladhar-Douglas, 2006, 57–79), though it also incorporates about half of Śāntideva's *Bodhicaryāvatāra* and much of his *Śikṣāsamuccaya*. Like its Indian precursor, it focuses on the cult of Lokeśvara and includes the subordination of Maheśvara (i.e. Śiva) and other Hindu deities.

The *Svayambhūpurāṇa* is extant in a number of versions of different length (Brinkhaus, 1993), bearing slightly different titles. The shortest and earliest version, entitled (*Gośṛṅgaparvate*) *Svayambhūcaityabhaṭṭārakoddeśa*, was probably composed around the early 15th century. It stands apart by being composed in prose and by lacking the Jinaśrī-Jayaśrī and Upagupta-Aśoka narrative frames. It is the sole specimen of Nepalese narrative literature that survives in the form of a palm-leaf manuscript (NGMPP E 1134/2), and it most likely is also the earliest exemplar of this genre (it may, in fact, have helped initiate the production of these texts). Rather than reworking standard Sanskrit narrative material, the *Svayambhūpurāṇa* is a novel composition, though not created from scratch, as it draws on literary tropes that apparently had some currency at the time, and is also related to other texts, notably the *Dvādaśatīrthamāhātmya*. The *Svayambhūpurāṇa* can be viewed as a response to the loss of the Buddhist heartland in North India since the 13th century (von Rospatt, 2009). The principal narrative device for achieving this is the Svayambhū myth. It relates that in prehistoric times, Nepal was a sacred lake on which the primordial Buddha principle (*dharmadhātu*) manifested (*bhū*) itself spontaneously (*svayam*) in the form of a light or luminous *caitya* on the pericarp of a lotus blossom. Next, the *Svayambhūpurāṇa* describes the draining of the lake by Mañjuśrī (who came from China in the form of Mañjudeva and took up residence in Nepal), the subsequent settlement of the Kathmandu Valley, its sanctification by *tīrthas*, and other holy places and shrines, as well as the eventual encasement of the self-arisen *dharmadhātu* inside the physical Svayambhū Caitya, which is located at the western outskirts of modern Kathmandu, where it continues to be revered as the most sacred shrine of the Newar tradition (see fig. 4). By incorporating the tantric goddess Khagānanā of the *cakrasaṃvaramaṇḍala* in the narrative and identifying her with the roots of the lotus on which Svayambhū manifests himself, the *Svayambhūpurāṇa* also renders the valley sacred in terms of the cult of Cakrasaṃvara and Vajrayoginī. Moreover, it also assigns a prominent role to the serpent deities (*nāgas*) and their role in rainmaking. Its key point is to eulogize historical Nepal and render it independently from India as a sacred Buddhist land. Like no other Newar Buddhist text, it has shaped the religious consciousness of the Newars, their understanding of the history of Buddhism in Nepal, and their place within that history. Attesting to its importance, the *Svayambhūpurāṇa* captured the imagination also of the Tibetans, who produced three translations, one of which is lost.

As part of the general movement to vernacularize Nepalese narrative literature, the *Svayambhūpurāṇa* (in its middle-length version in ten chapters, entitled, with some variations, *Svayambhūcaityasamutpattikathā*) was translated into Newari (Shakya, 2011). Speaking of its enduring hold on the Nepalese imagination, there is also a modern rendering of it in that language and derived from this, in Nepali, as Gorkhali has come to be known since it became the *lingua franca* of modern Nepal. Among further texts transposed into Newari are the *Maṇicūḍāvadāna*, the *Aṣṭamīvratamāhātmya*, the *Siṃhalasārthavāhakathā*, the *Kapīśāvadāna*, the *Kavikumārāvadāna*, the *Sudhanarājakumārajanmāvadānakathā*, the *Vīrakuśāvadāna*, and the *Viśvantarakathā*. To a lesser extent, this vernacularization was also extended to a selection of Indian scriptures of non-Nepalese origin, such as the *Lalitavistara* and the *Saddharmapuṇḍarīka*. Despite the dearth of manuscripts from before the 18th century, this process of vernacularization (which remains to be studied in detail) started already earlier, as attested by Newari-language manuscripts of the *Vicitrakarṇikāvadāna* (NGMPP D 50/3) and the *Aṣṭamīvratamāhātmya* (NGMPP S 1683/1) from the mid-17th century and by an even older manuscript of the *Aṣṭamīvratakathā* (NGMPP D 58/5), dating from 1535.

Supplementing the narrative and aforementioned *dhāraṇī* literature is a rich body of devotional literature (not yet studied systematically) composed in both Sanskrit and Newari, consisting of hymns (*stotra, stava*) and songs (*gīta*) dedicated to specific deities and used in their worship (*pūjā*; Sharkey, 2001). This genre is dominated by Avalokiteśvara in his various forms (Amoghapāśa etc.), but (Śākyasiṃha) Buddha, Svayambhū (under various names), Tārā, Vasudhārā, Yaśodharā, Vajrayoginī, and other deities also feature prominently. Furthermore, important hymns are dedicated to the ten powers (*daśabala*) and the eight auspicious signs (*aṣṭamaṅgala* or *maṅgalāṣṭaka*). Although its thrust is more ritual than devotional, another verse composition in Sanskrit, the *Buddhoktasaṃsārāmaya*, composed in Nepal after the 15th century, is also worth mentioning. Its third chapter prescribes the aforementioned old-age rituals and includes verses that are ascribed to a certain *Nemasūtrapārājikā*.

It is noteworthy that the literary production of Newar Buddhism has continued uninterrupted into the present. To name but a few examples, Amṛtānanda, who worked for Brian Houghton Hodgson and his predecessors in the early 19th century, composed a slew of works, among them the influential *Dharmakośasaṃgraha* and the chapters of Aśvaghoṣa's *Buddhacarita* missing in the available manuscripts, an addition that E.B. Cowell integrated into his edition (1893). The 19th century also saw the production of Buddhist chronicles of the history of the Kathmandu Valley (possibly on behest of the British Residency). The best known is the compilation by Daniel Wright, the surgeon to the British Residency, published in an English rendition in 1877, commonly known as the *Wright Chronicle*. In 1914, Niṣṭhānanda Vajrācārya completed the publication of a lengthy literary compilation of the life of the Buddha in Newari entitled *Lalitavistara*, though in truth it draws together a range of narrative works current in Newar Buddhism. A more original rendering of the life of the Buddha, also based on sources outside the fold of Newar Buddhism, was authored by Chittadhar Hṛdaya. His poem *Sugata Saurabha*, published in 1949/1950 and recently translated into English (Lewis, 2007), is written in elaborate Newari verse. There are also numerous prolific Newar scholars, mostly Vajrācāryas but some – like the late Hemraj Shakya – also Śākyas, who have published hundreds of studies dedicated to particular aspects of their tradition. These publications owe their existence to the growing availability of printing technology in Nepal since the 1960s. The introduction of this technology has also impacted the production of ritual manuals, with printed booklets displacing the handwritten versions that priests traditionally compiled for their purposes, a process that used to allow for considerable variety in practice, reflecting different preferences and ritual traditions.

The steady gains that the Theravāda movement has made in Nepal since its legalization in 1950 (it originated in the 1920s but was originally suppressed) have been accompanied by literary productions in Newari that are inspired by modernist Buddhism, in which this movement is rooted. These literary productions include didactic digests, manuals with extracts from the Pali scriptures recited for protection (*paritta*), and collections of devotional hymns and songs, notably published by the Gyānmālā Bhajan Khala, an association with several branches in the Kathmandu Valley dedicated to chanting hymns in the Indian *bhajan* style. Moreover, in an ongoing effort, most of the Pali *Suttapiṭaka* and parts of the *Vinayapiṭaka* and *Abhidhammapiṭaka* have been translated into Newari and are now being translated partially also into Nepali.

ALEXANDER VON ROSPATT

Local Literatures: Bön

Bön (Tib. *bon*) is a Tibetan religious tradition demographically concentrated in eastern and northeastern Tibet. It is regarded as a distinct religion by its own adherents, the Bönpos (Tib. *bon po*), as well as by other Tibetans. However, in many essential respects, it is closely related to Buddhism in Tibet:

1. it has numerous monasteries in which monks and nuns pursue lives of study, ritual activity, and meditation;
2. it has a vast body of sacred scriptures, written in the same literary Tibetan language as that employed by Buddhists; and
3. its art and iconography differ from those of Buddhists in detail but are expressed in the same aesthetic idiom.

Nevertheless, it is justifiable to regard Bön as a separate religion, as it does not accept Śākyamuni as the source and teacher of its doctrines, however similar they may be to those of Buddhism. Instead, Bön maintains that the teacher (Tib. *ston pa*) of the present eon is Tönpa Shenrap (Tib. Ston pa gshen rab), who lived long before Śākyamuni as the ruler of the land of Stag gzig (sometimes spelled Rtag gzigs), situated to the west of Tibet. From there, so the Bönpos maintain, he spread the teachings and rituals of Bön to many countries in the world. Thereafter, Bön became established in a realm known as Zhang Zhung, probably located in what is today western Tibet, whence it finally reached Tibet. In Tibet it flourished until it was supplanted by Buddhism in the 8th century CE, an event that Bönpos view as a catastrophe. The holy scriptures of Bön are regarded as having been translated into Tibetan from the language of Zhang Zhung and thus antedating Buddhist texts in Tibet. Buddhists have tended to think of this claim as a hoax, but research has shown that in some cases, Tibetan Buddhist texts are indeed adaptations of Bön texts, and not vice versa (Blondeau, 1971).

Bön as a distinct religion, including a monastic tradition, would not seem to be identifiable in Tibet before the 10th century CE. This tradition is often styled "Eternal Bön" (Tib. *g.yung drung bon*) by its adherents. However, the picture is complicated by the presence in Tibet of priests referred to in contemporary as well as later texts as Bönpos – apparently ritual experts attached to the court of the Tibetan kings – at the time of the introduction of Buddhism, several centuries earlier. However, these ritual experts may have had a much broader social basis, and their ritual and mythological lore seems to have been to some extent continued in popular religion in parts of Tibet and the Himalayan region up to present times. A few ritual texts in pre-Classical Tibetan describe myths and rituals connected with the milieu of these early Bön priests (Lalou, 1952; Stein, 1971). These texts contain elements that are found in later texts also, but nevertheless there seems to be a break in continuity in the 9th century CE linked to the disintegration of the Tibetan empire.

While traveling in eastern Tibet in 1929, J.F. Rock came across "piled up in a corner … a manuscript copy of the Bön bKa-hgyur and bsTan-hgyur written on stiff black paper. It was an enormous pile, and I could have bought it at the time" (Rock, 1952, vol. I, 3). Unfortunately, for logistical reasons he did not do so. At the time, only two texts identified as belonging to the Bön religion had been published in the West:

1. a ritual text, the so-called *Klu 'bum*, in two different versions (see Schiefner, 1880; Laufer, 1898); and
2. a part of the *Gzer mig*, the biography of Tönpa Shenrap (Francke, 1924ff.).

Since then, the situation has changed dramatically. As one scholar put it in the early 21st century, the availability of Bön texts has developed "starting as a mere trickle in the 1960s, building into a raging glacial stream coming out of India in the following decades, until now when we are practically drowning in the ocean of Bon scriptures" (Martin, 2003, 1–2).

It is almost impossible to give a comprehensive overview of the thousands of volumes constituting the literary corpus of the Bön religion. The present article, therefore, focuses on those texts that are available in translation, particularly in English. For an overview and history of this literature, however, one might start with three kinds of texts:

1. chronological tables (*bstan rtsis*);
2. historical works (*bstan 'byung*) and biographies (*rnam thar*); and
3. catalogues or inventories (*dkar chag*).

A *bstan rtsis* takes as its point of departure an event that the Bönpos traditionally consider of

crucial importance, states, in a kind of shorthand style, the number of years separating it from the following event of importance, and continues, event by event, in chronological order down to the year of composition of the text. Thus, if the latter year is known, one may, calculating in the opposite direction, arrive at the year of each event. Three such *bstan rtsis* of Bön, composed in 1804, 1842, and 1955, have been studied (Kværne, 1990a; 1971; 1988). The 1842 text, composed by Nyima Tenzin (Tib. Nyi ma bstan 'dzin; 1813–1875), the 22nd abbot of the famous Bön monastery of Sman ri in central Tibet, has also been translated (Kværne, 1971). In this way, it has been possible to fix important events and personalities in time – at least tentatively, for the datings provided by the various *bstan rtsis* do not always coincide.

Historical texts are often known as *bstan 'byung*, implying that they relate to the origin (*'byung*) of the normative teachings (*bstan*) of Bön. However, not all texts relating the history of Bön have this specific designation in their title. As early as 1915, a Bön history, probably dating from the 15th century, was published (but not translated) in Calcutta by S.C. Das (1915). So far, however, only one Bön historical text has been translated – namely the *Legs bshad mdzod*, composed by Shar rdza Bkra shis rgyal mtshan (1859–1934; see Karmay, 1972; Achard, 2008). Although a relatively recent text (begun, according to the author, in 1922), it is based on a great number of older sources, many of which are quoted. Several other histories of Bön are available, all of which remain untranslated. One of these is an extensive work by Dpal ldan tshul khrims (1902–1972), probably composed circa 1966 (Dpal tshul, 1988).

In contrast, catalogues or inventories (*dkar chag*) of what may be termed "canonical texts" of Bön have been fairly extensively published and analyzed. Bön canonical texts fall into two distinct categories, in recent years often designated "Kanjur" and "Tenjur" (i.e. Tanjur), adopting the Buddhist terminology.

Broadly speaking, the Kanjur consists of texts that are regarded as emanating from Tönpa Shenrap himself (and hence are generally known as *Bka'*, The Word), codified by his disciples shortly after his death. It should be noted that most canonical texts are not believed to have enjoyed uninterrupted transmission from Tönpa Shenrap but to have been hidden at various times when Bön was threatened, to be retrieved in the form of "treasures" (*gter*) when times were more propitious. The "treasure discoverers" (*gter ston*) could find texts by chance, hidden in the ground or in buildings, or as a result of signs and dreams, or in the form of revelations arising in their minds ("mental treasures," *dgongs gter*). A famous Bön *gter ston* is Gshen chen Klu dga' (996–1035), intensively studied by D. Martin (2001). The preponderance of such revealed texts in the Bön Kanjur distinguishes it from its Buddhist counterpart. As for the Tenjur, it consists of texts that, while not ascribed to Tönpa Shenrap himself, are nevertheless "firmly based" (*brten*) on his *Bka'* ("Word"). Hence in Bön tradition, they are collectively known as *Bka' brten*. Inventories of the Bön Kanjur have been published by P. Kværne (1974) and D. Martin (2003), while an inventory of the Tenjur (*Bka' brten*) has been published by S.G. Karmay and Y. Nagano (2001).

The first such inventory to be made availabe in the West, written soon after 1836 and published in Tibetan in New Delhi in 1965, was analyzed and presented by P. Kværne (1974). The author is Nyima Tenzin, who wrote the *bstan rtsis* referred to above (Kværne, 1971). It is not certain whether his *dkar chag* is an inventory of an existing set of scriptures or simply a list of texts that in his opinion should be regarded as authoritative. Be this as it may, Nyima Tenzin divides the texts of the Kanjur into four groups:

1. *mdo* (a word that the Buddhists use to translate "*sūtra*");
2. *'bum* ("Hundred Thousand [Verses]," corresponding to Prajñāpāramitā);
3. *rgyud* (*tantra*); and
4. *mdzod* ("Treasure," lit. Abhidharma).

The latter category, however, differs fundamentally from Buddhist Abhidharma texts, being constituted by texts expounding the philosophy and meditational practice of Rdzogs chen ("Great Perfection"). The relationship of this aspect of Bön to the tradition bearing the same name in the Buddhist Nyingma remains to be established.

Nyima Tenzin's catalogue represents a determined effort to exclude texts that, according to the internal criteria of Bön, could not, in his opinion, be securely attributed to Tönpa Shenrap himself or to a tradition fully acknowledging his authority. To this extent, Nyima Tenzin's work as a compiler of texts of indubitable canonicity parallels that of the Buddhist scholar Bu ston (1290–1364), the creator of the first version of the Tibetan Buddhist Kanjur and Tenjur.

Exactly when the first Bön Kanjur was assembled is not known, but as Nyima Tenzin does not list texts that are assigned a date later than 1386, it is hardly

te later than 1386, it is hardly

likely that a Bön Kanjur appeared prior to early 15th century. One may assume that this urge for the codification of sacred scriptures is linked to the appearance of a celibate Bön monastic tradition in central Tibet at that time, in particular represented by the monastery of Sman ri founded in 1405, slightly antedating the far larger contemporary Gelugpa monasteries, institutions with which Sman ri shared many traits, albeit on a smaller scale.

Nyima Tenzin's catalogue, while regarded by many Bönpos as normative, is not the only such inventory, nor indeed the earliest one. With regard to the Bön Kanjur, two catalogues were written by Kun grol grags pa (b. 1700), in 1740 and 1751, describing two different manuscript editions (Martin, 2003, 7). The latter is an inventory of a specific manuscript edition of the Kanjur prepared under the patronage of the king of Khro skyabs, one of the principalities in Rgyal rong in present-day Sichuan. Shortly thereafter, woodblocks for printing the entire Bön Kanjur were carved, again under royal patronage, not only in Khro skyabs but also in the neighboring principality of Chu chen. The Khro skyabs blocks continued to be in use until they were destroyed during the Cultural Revolution, and as far as is known, no complete set of a woodblock edition has survived, although a number of individual volumes have been preserved and published in recent decades. Two other Bön Kanjur catalogues from the 19th century have been published in Tibetan, and one or two are known by citation (Martin, 2003, 15–16).

Apparently, only one complete copy of a Bön Kanjur survived the upheavals in Tibet during the late 1950s and the subsequent Cultural Revolution, namely a manuscript edition from the Dbal khyung Monastery in the district of Nyag rong in eastern Tibet, although parts of other sets and many individual texts also survived. The Dbal khyung manuscript was hidden in a cave until it was taken out and eventually published.

From the 1980s onward. more or less complete sets of the Kanjur were assembled, and several editions have been published in recent decades. These are available not only in monastic libraries in Tibet but also in academic institutions in the West. The first edition appeared in Chengdu in 1985, in 154 volumes. Subsequently another edition in 192 volumes was brought out in the Nga ba district in northwestern Sichuan in 1987, of which a reprint was made in Chengdu in 1991. Finally a third edition, in 178 volumes, appeared in Chengdu in 1995, with a second print run in 1999. This edition to a large extent reproduces the Dbal khyung manuscript. A detailed catalogue of the 1987 Nga ba edition was prepared by an international group of scholars in Oslo in 1995–1996 (Martin, 2003).

The Bön Tenjur, or, following usual Bön terminology, the *Bka' brten*, was never a tightly organized collection of texts. The catalogue of Nyima Tenzin divides the texts of the *Bka' brten* into the following:

1. "outer" (*phyi*), consisting of commentaries and texts belonging to the *mdzod* and the *mdo*, including commentaries to the monastic discipline (*'dul ba*), as well as related rituals;
2. "inner" (*nang*) texts, consisting of mainly ritual texts focusing on tutelary deities (*yi dam*), protectors of the doctrine (*bka' skyong*, corresponding to the Buddhist *dharmapāla* deities), *ḍākinīs*, *gcod* rituals (rituals of offering oneself to all living beings), prophecies, and collected works (*gsung 'bum*) of certain lamas;
3. "secret" (*gsang*), in which one finds rituals and commentaries to Rdzogs chen texts as well as texts that are not regarded as deriving directly from Tönpa Shenrap himself; and
4. a small section at the end of this huge collection with texts dealing with profane matters such as art, medicine, and grammar.

Toward the end of the 1990s, a Bön lama in Tibet, Sog sde Bstan pa'i nyi ma, assembled a large number of texts that were given the collective designation "Bonpo Tenjur." He did not follow Nyima Tenzin's *dkar chag* very closely, instead favoring the idea of including as many texts as possible. The resulting edition, printed in Lhasa, consists of no less than three hundred volumes. An impracticality is that "[t]he texts in this collection are not arranged in any kind of order nor are the volumes numbered coherently in a particular way" (Karmay & Nagano, 2001, x). Nevertheless, a detailed catalogue appeared in 2001 (Karmay & Nagano, 2001). In the meantime, the Tibetan publisher apparently kept on adding texts to the collection.

The number of texts included in the two collections described above amount to several thousand, of which only a tiny fraction have been translated or studied, in whole or in part, by scholars outside Tibet. The following overview, although by no means comprehensive, illustrates how severely limited access to Bön texts remains for those who do not read Tibetan.

The early translations published by F.A. Schiefner, A.H. Francke, and B. Laufer have been referred to above. The texts that they studied all belong to the *mdo* section of the Kanjur. A watershed in Bön studies was the translation with commentaries by D. Snellgrove (1967) of excerpts from the *Gzi brjid*, a text likewise belonging to the *mdo* section, ostensibly the "long" version of the life of Tönpa Shenrap (see below). Consisting of 12 volumes, it might well be regarded as a compendium of about 50 independent texts, many dealing with philosophy or ritual, only loosely bound together by the narrative thread of Tönpa Shenrap's biography. The excerpts chosen by D. Snellgrove illustrate Bön rituals and philosophy according to an ascending ladder of spirituality as traditionally established by the Bönpos themselves called *theg pa dgu* ("nine ways" or "nine vehicles"). For the first time, readers in the West could study a coherent presentation of Bön on the basis of texts regarded as authoritative by Bönpos themselves.

Turning to the *rgyud* section of the Kanjur, very few texts are available in scholarly translation. A short *tantra* dealing with various substances used in ritual and medical contexts has been translated (Walter, 1986) as well as several short invocations of Bön tutelary deities (*yi dam*; see Kvaerne, 1990b; 1995).

So far, no text from the *'bum* section seems to have been translated. However, a number of texts from the fourth and final section, the *mdzod*, have been studied and translated. One reason for this particular focus is probably the fact that the fundamental difference between the Bön and the Buddhist Kanjur is to be found precisely in the *mdzod*, which is, as already noted, comprised of texts expounding the meditational and philosophical tradition known as Rdzogs chen. A tradition bearing the same name also exits in the Nyingma school of Tibetan Buddhism, but none of its texts is included in the Buddhist Kanjur.

A fundamental study, with numerous textual quotations, of the early history of the origins of the Rdzogs chen traditions and the relationship between its Bön and Nyingma variants has been carried out by S.G. Karmay (1988). The Rdzogs chen tradition plays an important role in the spiritual life of Western followers of several Bön lamas, but translations and studies that are not academic are not noted here, even though some are the outcome of long familiarity with the texts and their application in spiritual practice.

An important collection of texts in the *Mdzod* section is the *Zhang zhung snyan rgyud* (The Oral Transmission [of Texts] from Zhang Zhung). As the title indiciates, this textual collection has not been "hidden" and then "rediscovered", but has been transmitted – according to Bön tradition – orally by sages in Zhang Zhung and later in Tibet, where it was eventually committed to writing. The history of this transmission has been studied by S.G. Karmay (1998). Short texts from this collection have been translated: (1) *Sgron ma drug gi gdams pa* (The Doctrine of the Six Lights; see Orofino, 1985, 71–96; 1990, 61–84) and (2) *Rgyud bu chung bcu gnyis* (The Twelve Little *Tantras*; see Rossi, 1999, 73–161). One may note that although styled as a *tantra* (*rgyud*), the latter text is part of the *mdzod* section. To complicate matters further, a chapter expounding Rdzogs chen is to be found in the *Gzi brjid*, which is in the *mdo* section (Snellgrove, 1967, 226–255; see also above).

Another Kanjur text has likewise been translated by D. Rossi, the *Lta ba seng ge sgra bsgrags* (The View That Is Like the Lion's Roar; Rossi, 1999, 165–271). This is said to be one of the texts rediscovered by the *gter ston* Bzhod ston Dngos grub in 1088 (Orofino, 1990, 86). Various texts are part of the same tradition of Bön Rdzogs chen but are classified as belonging to the Tenjur, namely the texts subsumed under the heading *a khrid* (Fundamental Teachings; see Kvaerne, 1973). The basic *a khrid* texts are not considered to have been rediscovered but to have been composed by the historical figure Rme'u Dgongs mdzod ri khrod pa (b. 1038).

As is the case with Tibetan Buddhist literature, biographies (*rnam thar*) are abundant in the Bön religion, but so far none has been translated, with the exception of three very short biographies of 11th-century lamas (Kværne, 1973) and that of Gshen chen Klu dga' (Martin, 2001). However, the biography of Tönpa Shenrap might be noted here, as Bönpos regard it as a historical account. As mentioned above, excerpts from the two-volume *Gzer mig*, probably dating from the 11th or 12th century, were published by A.H. Francke in the early 1920s. Two other versions exist: the *Mdo 'dus* in one volume, probably somewhat older than the *Gzer mig* and so far untranslated, and the 12-volume *Gzi brjid*, considered to be a "treasure" that manifested itself in the mind of Blo ldan snying po (b. 1325). A summary of the biographical narrative of the *Gzi brjid* as illustrated by a set of painted scrolls in the Musée Guimet in Paris has been published by P. Kværne (1986a). Although containing elements that are parallel to the biography of Śākyamuni, the narrative structure of the Tönpa Shenrap biographies also has much in common with the Tibetan epic of King Gesar – in some instances, it recycles literary as well as folktale motifs that are widely distributed outside Tibet (see Karmay, 1975; Kvaerne, 1980; 1986b).

From about the 11th century onward, the Bön religion gave rise to a vast scholastic and commentarial literature in which the philosophical tenets of Bön were expounded and commented on, either in commentaries to canonical texts or in the form of independent scholastic works, sometimes having the format of encyclopedic compendiums. A careful critical edition of one such work, the *Bon sgo gsal byed* (Clarification of the Gates of Bön), composed by Tre ston Rgyal mtshan dpal in the 14th century, has been published (Mimaki & Karmay, 2007), and a part of it has been translated (see Mimaki & Karmay, 2009; 2010). The translated part is of particular interest as it is a presentation of the *theg pa dgu* ("nine vehicles") into which the rituals and teachings of Bön may be divided (see Snellgrove, 1967). The activities of *gter ston* have also continued unabated up to the present time, and a detailed catalogue of the texts brought to light by one such figure, Bde chen gling pa (b. 1833), has been published recently (Achard, 2004).

Local Literatures: Sogdian

Buddhist scriptures in Sogdian, an East Middle Iranian language once spoken in Sogdiana, located between the two great rivers of Central Asia, the Amu Darya and the Syr Darya, in what is now Uzbekistan, have been discovered in Dunhuang and Turfan in China. The extant Sogdian texts are mainly translations from Chinese and date mainly to the 7th–10th centuries.

Sogdiana consisted of several oasis-states, located along the Zarafshan (also known as Zeravshan) and Kashkadarya rivers. The leading cities were Samarkand and Bukhara. Before the Islamization of Central Asia, in particular during the Chinese Sui and Tang dynasties (581–907 CE), the Sogdians played a leading role as international traders along the Silk Road connecting China and the West, with the result that a considerable number of Sogdians settled in East Turkestan and China, where Buddhism was flourishing. (On the history of Sogdians in general, see de la Vaissière, 2005.)

When Xuanzang (玄奘; 602–664 CE) visited Samarkand in 630 CE, the Sogdians were Zoroastrians and did not believe in Buddhism (Watters, 1904–1905, 94). This observation, combined with the sparsity of Buddhist remains excavated from former Sogdiana, leads one to assume that Buddhism did not spread to Sogdiana (Compareti, 2008). Thus, the modern discovery of many Buddhist Sogdian texts from Dunhuang (敦煌) and Turfan indicates that the Sogdians adopted the religion only after they immigrated to the area where Buddhism was flourishing. This situation was rightly described by X. Tremblay (2007, 95–97) as "a colonial phenomenon," which most clearly manifests itself in the fact that the bulk of the extant Sogdian texts are based on Chinese translations and apocryphal texts. The Sogdian dependence on Chinese texts is also reflected in the Buddhist Chinese texts that are phonetically transcribed in Sogdian script. (On the peculiarities of Sogdian translations from Chinese originals, see Meisterernst & Durkin-Meisterernst, 2005; 2009; 2012.)

The bulk of Buddhist Sogdian texts were discovered by expeditions from Europe and are currently preserved in libraries and museums in France (Pelliot collection; Dunhuang), England (Stein collection; Dunhuang), Germany (the so-called German Turfan Collection), and Russia (Oldenburg and Krotokov collections; Dunhuang and Turfan), while a meager number of texts are housed in Japan (Ōtani collection; Turfan) and China (National Library of China and Turfan Museum; Dunhuang and Turfan). Virtually all the texts discovered in Dunhuang have been published, but a considerable number of manuscripts from the German collection remain to be edited; a catalogue is, however, in preparation (Reck, forthcoming b). The most basic publications of these materials are by E. Benveniste (1940; 1945), D.N. MacKenzie (1976), F.W.K. Müller and W. Lentz (1934), and A.N. Ragoza (1980); moreover, a series of articles was published by K. Kudara and W. Sundermann (1987; 1988; 1991; 1992; 1998), W. Sundermann (2001; 2006; 2008; 2010), and Yoshida Yutaka (see the bibliography). In addition, Buddhist Sogdian literature has been surveyed by O. Hansen (1968), D. Utz (1978), and Yoshida Yutaka (2009a).

Buddhist Sogdian texts are written on paper, and the manuscripts are either books of *poṭhī* (palm-leaf format) type imitating Indian palm-leaf manuscripts or scrolls consisting of folios of Chinese paper joined together. When copying texts on *poṭhī* sheets, lines run either along the longer (long-lined *poṭhī*) or along the shorter side (short-lined *poṭhī*). Almost all the Buddhist texts known in Sogdian are written in the formal Sogdian script, often referred to as the *sūtra* script. Buddhist Sogdian texts were copied on brand-new sheets of paper, in stark contrast to Manichaean Sogdian texts, many of which are written on the reverse side of Chinese Buddhist texts. Only one text, the so-called *Mstk'r'k cš'nt prxwn pwstk* (*Sūtra* of Condemnation of Intoxicating Drink) discovered in Dunhuang, bears a date, namely 728 CE (see MacKenzie, 1976), the date when it was translated in Luoyang (洛陽).

While nothing linguistic or paleographic indicates that the remaining manuscripts are significantly younger or older than this work, the dating of Buddhist Sogdian texts to the period not earlier than the 7th–8th centuries is supported by other evidence. For example, some of the Chinese originals were produced by those active in translation during the 7th and 8th centuries, such as Xuanzang

(translated between 645 and 664 CE), Śikṣānanda (實叉難陀; translated between 695 and 704 CE), Yijing (義淨; translated between 695 and 713 CE), and Amoghavajra (Bukong [不空]; translated between 746 and 774 CE). Moreover, the latest stage is likely to be represented by those showing Uighur elements in the colophons (see Yoshida Yutaka, 2009a, 327–329). In view of the settlement of the Uighurs in the Turfan basin in the late 9th century, these texts seem to be dated to the 10th century.

The places of translation noted in the colophons are Luoyang (see above), Chang'an (長安; Pelliot sogdien 2), and Dunhuang (Pelliot sogdien 8). Since a colophon found in one Turfan text states that it was translated from the Kuchean language (or Tocharian B) by a Kuchean man, the text is likely to have been translated in Kucha or Turfan (Henning, 1940, 59–62; Kudara & Sundermann, 1987, 347–348).

Most Buddhist Sogdian texts are more or less faithful translations of Chinese originals. Yet others seem to have been based on prototypes in either Sanskrit or Tocharian, although it has not been possible to trace their originals.

Buddhist Sogdian texts are unique among those in Central Asian languages – such as Tocharian, Khotanese, and Uighur, not to mention Tibetan, Tangut, and Mongolian – in that Buddhism never attained the status of a state religion among the Sogdians. Thus, there was no state-organized saṅgha of Sogdian monks, and Sogdian Buddhists were therefore not able to enjoy support from the state when translating and copying texts. This had many consequences, one of which was that this lack of organized community may have prevented the establishment of standard Buddhist terminology in Sogdian. For example, in Sogdian Vinaya texts, the term *poyiti* (波逸提; Skt. *prāyaścittika*, *pāyattika*, etc.; atonement, etc.) is rendered in several ways: *p'ytyk*, *p'ytk*, and *p'yty* (Yoshida Yutaka, 2010, 92n13). Since the form of this term can vary according to ordination lineage (on the background of various Indian forms of this term, see von Hinüber, 1985), this situation is only understandable when one considers the fact that the Sogdians did not belong to a particular Buddhist school, nor did they have their own tradition of ordination; they simply adopted the form of the term found in the source text that they were translating.

Despite the diversity shown here, the texts that have come down to us do share a considerable number of Buddhist terms. For example, *wytxwy* (*'t*) *sryßt'm*, "suffering (and) pain," which translates the Chinese term *fannao* (煩惱, "vexation-annoyance"; Skt. *kleśa*, pain, affliction, distress), is most conspicuous, in that the combination is quite common among Buddhist texts, but each component is attested only in this particular combination. The equivalent for the Sanskrit *bhagavān* (the holy one), *pk'ß'm*, is another term encountered in various texts from both Dunhuang and Turfan, based on the Chinese *bojiafan* (薄伽梵), which in turn is the transcription of the Sanskrit word (Sims-Williams, 1983, 138). (On the problems of Indian proper names in Sogdian texts, see also Provasi, 2013.)

It is almost always the case that only small fragments of Sogdian texts remain, of which the originals were often large *sūtras*. In such cases, we are not certain whether the Sogdian versions were entire translations of the originals or only excerpts of interesting parts. One illuminating case is some 80 fragments of a short-lined *poṭhī* book of the Mahāyāna *Mahāparinirvānamahāsūtra* from the German Turfan collection (see below). Since the identified fragments correspond to various places among the 40 volumes of the Chinese original, it is safe to assume that there once existed an entire translation of the *sūtra* and to presume that the same applies to the fragments of other large *sūtras* such as the *Gaṇḍavyūha, Suvarṇabhāsottama*, and *Pañcaviṃśatisāhasrikāprajñāpāramitā* that exist in translated Sogdian fragments.

In what follows, the Buddhist Sogdian texts are surveyed in accordance with their contents.

Texts Concerning Beneficent Buddhas and Bodhisattvas

Sogdian lay Buddhists were attracted by a creed that included spells to procure material benefits, the pacification of angry ghosts, and so on. The most popular deities supplicated were Bhaiṣajyaguru ("Medicine Buddha") and the bodhisattva Avalokiteśvara. Four different manuscripts of the Sogdian version of the *Bhaiṣajyaguruvaiḍūryaprabhārāja* have been found (see Yoshida Yutaka, 2009a), which is quite exceptional among the Buddhist Sogdian texts, since each text is usually represented by only a single copy. The two manuscripts so far published (Pelliot sogdien 6 and one Turfan fragment in Kudara & Sundermann, 1992) are based on Xuanzang's version (*Yaoshi liuliguang rulai benyuan gongde jing* [藥師琉璃光如來本願功德經; *Sūtra* Expounding the Merits of the

The bodhisattva Avalokiteśvara was no less popular than Bhaiṣajyaguru, and several Sogdian texts concerning him are known. One of them is called the *"ry'βr'wkδyšβr pwtystβ mx'stβ 100 'št' n'm swtr γwβty'kh pwstk* (*Sūtra* of the Glorification of 108 Names of the Bodhisattva Mahāsattva [Called] Āryavalokiteśvara; Pelliot sogdien 8), which contains a long list of buddhas, bodhisattvas, and other supernatural beings, followed by short *dhāraṇīs* and the merits that one obtains by reciting them. Its original has not been identified, but it seems to have been popular among the Sogdians, since another copy of the same text is found among the Dunhuang texts (Pelliot sogdien 8bis). According to its colophon, this text was translated in Dunhuang by the commission of Chorakk of the Xan (Kang [康]) family, whose family members are also named. Pelliot sogdien 7 is a complete text of the *Amoghapāśahṛdaya* followed by its *dhāraṇī*; however, the Sogdian texts do not agree with any of the Chinese versions (Meisterernst & Durkin-Meisterernst, 2009).

Another form of Avalokiteśvara popular among the Sogdians was Ruyilun guanyin (如意輪觀音), called *ckrβrt cynt'mny* (Skt. *cakravarti-cintāmaṇi*) in Sogdian. One text from Dunhuang (MacKenzie, 1976) was translated from the *Padmacintāmaṇidhāraṇī* (*Guanshiyin pusa mimizang ruyilun tuoluoni shenzhou jing* [觀世音菩薩祕密藏如意輪陀羅尼神呪經; *Sūtra* of the *Dhāraṇī* or Supernatural Spell Belonging to Bodhisattva Avalokiteśvara's Secret Repository of the Talismanic Wheel]; T. 1082). Two passages cited from the same text are found in another Dunhuang text (Pelliot sogdiens 14, 15, 30; for three fragments from one manuscript, see Yoshida Yutaka, 2009a), which also contains a short passage from a ritual manual based on the same *sūtra* called *Guanzizai pusa ruyilun niansong yigui* (觀自在菩薩如意輪念誦儀軌; Rituals of Recitation of [the *Dhāraṇī* of] Bodhisattva Avalokiteśvara's Talismanic Wheel; T. 1085), *Avalokiteśvarabodhisattvacintācakrādhyāyakalpa*, translated into Chinese by Amoghavajra. A further text in Brahmi script of the *dhāraṇī* of yet another form of the bodhisattva Nīlakaṇṭha (T. 1061, 1111), accompanied by its phonetic transcription in Sogdian script, is also encountered among the Dunhuang texts (La Vallée Poussin & Gauthiot, 1912; Lévi, 1912).

Texts Concerning Popular Ethics and the Vinaya

Another group of texts that stand out among the Buddhist Sogdian texts is that expounding good and bad actions as causes of corresponding effects. The eight commandments for lay Buddhists and the reward for observing them are the subject of the *Dīrghanakhaparivrājakaparipṛcchā* (*Changzhao fanzhi qingwen jing* [長爪梵志請問經]; T. 584; Pelliot sogdien 5). This text is followed by another text (Pelliot sogdien 17; see Yoshida Yutaka, 1985a), a formula for receiving the eight commandments, which is similar to, but not identical with, a group of popular Dunhuang Chinese texts called *Shou ba guanzhaijie wen* (受八関齋戒文; Formula for Receiving the Eight Commandments of Abstinence). The so-called *'krtyh 'nβ'nt ptwry pwstk* (*Sūtra* of the Causes and Effects of Actions; MacKenzie, 1970) is translated from a Chinese apocryphal *sūtra* (*Shan'eyinguo jing* [善惡因果經]; T. 2881). The so-far unidentified *Mstk'r'k cš'nt prxwn pwstk* (see above) is another text belonging to this group. Another text that highlights negative consequences focuses on the eating of meat, which was strictly prohibited in some forms of Mahāyāna Buddhism. It is the only subject of Pelliot sogdien 2, in which relevant passages are cited from the *Laṅkāvatārasūtra* (T. 670), the *Aṅgulimālīyasūtra* (T. 120), and the *Da fangguang huayan shi'e pinjing* (大方廣華嚴十惡品經; *Sūtra* of the Chapter on the Ten Bad Actions of the Great and Spacious Garland; T. 2875), the last being a Chinese apocryphon. The commandment not to eat meat and not to drink alcohol is again the subject of Pelliot sogdien 21, but its original text has not yet been identified.

The commandments of Mahāyāna Buddhism, or rather of the bodhisattva *śīlasaṃvara*, are the main subject of another Chinese composition, the *Fanwang jing* (梵網經; T. 1484, **Brahmajālasūtra*), translated into Sogdian (Yoshida Yutaka, 2008b). One fragment from the German Turfan collection cites a passage from the same *sūtra*, but the larger text itself is not identified (Yoshida Yutaka, 2008b). One *poṭhī* folio discovered in Turfan comprises the end part of *Foshuo fanjie zuibao qingzhong jing* (佛說犯戒罪報軽重經; *Sūtra* Spoken by Buddha on the Lightness and Heaviness of the Sin of Transgression of *Śīla* [Precepts]; T. 1467), and the beginning of the *Foshuo shi feishi jing* (佛說時非時經; *Sūtra* Spoken by Buddha on Time and Not-Time; T. 794; see Kudara & Sundermann, 1987). A colophon of one fragment belonging to the same manuscript states that it was translated from the Kuchean (or Tocharian B) language and names the text itself as *šm'r'kh pδkth ywk'* (teaching of the rules of meditation; see Kudara & Sundermann, 1987, 348). The *Śukasūtra* or *Karmavibhaṅga* (*Fo wei shoujia zhangzhe shuo yebao chabie jing* [佛爲首迦長者說業報差別經]; *Sūtra* Spoken by Buddha for a Householder Named Śuka on the Distinction between the Effects of Actions; T. 80) deals with acts and their results in secular life, but what has survived from the Dunhuang Sogdian text is broken just after the story begins (see text 93 in Ragoza, 1980). An unpublished Turfan fragment (So 14700[22]) also contains a passage from the same text.

In conclusion of this section, mention needs to be made of the Vinaya and *Pratimokṣa* in Sogdian. Small fragments of Dharmaguptaka *Prātimokṣa* (*Sifen sengjie ben* [四分僧戒本; Book of *Pratimokṣas* Consisting of Four Sections]; T. 1430; see Yoshida Yutaka, 2000) and three fragments showing a text similar to the 20th to 24th *pāyattikas* (atonements) of the Dharmaguptaka Vinaya (*Sifen lü* [四分律; Vinaya Comprising Four Sections]; T. 1428; see Yoshida Yutaka, 2008a) are known. The latter text also contains a part corresponding to the *Sifen lü shanfan buque xingshi chao* (四分律刪繁補闕行事鈔; Improved Edition of the *Sifen lü* by Deleting What Is Superfluous and Supplementing What Is Missing; T. 1804).

Narratives

The most well-known Buddhist Sogdian text is the Sogdian version of what in Pali is called the *Vessantarajātaka*, one of the earliest Sogdian texts to be published by modern scholars. There are some controversies surrounding the immediate prototype of the text, which shows the most developed style of any Buddhist Sogdian text. It is therefore perhaps a native Sogdian composition, a retelling rather than a translation (Sims-Williams, 1989). Even so, D. Durkin-Meisterernst (2009) claims that the text was originally based on a non-Chinese text, while Yoshida Yutaka (2013a) argues that the Sogdian text was adapted from the most popular Chinese version *Taizi xudana jing* (太子須大拏經; The *Sūtra* about Prince Xiudana; T. 171).

The *Araṇemijātaka* was very popular in the northern Tarim basin, and in addition to the Sogdian, versions in Tocharian A and B, Tumshuqese, and Uighur have been discovered. The Sogdian text is unique in that every *poṭhī* folio is illuminated on one side (Sundermann, 2001; Ebert, 2001). A story about King Kāñcanasāra from chapter 5 of the *Daśakarmapathāvadānamālā*, a cycle of legends collected to expound the ten courses of action, is also found in one *poṭhī* folio (Sundermann, 2006). Compared with the corresponding Uighur version, the Sogdian seems to represent an independent recension based on a now lost Tocharian prototype (Sundermann, 2006).

So far, six manuscripts of the *Saṅghāṭasūtra* have been identified, and the text seems to have been especially beloved by Buddhist Sogdians (Sims-Williams, 1981; Yakubovitch & Yoshida, 2005). The *sūtra* does not treat particular aspects of Buddhist doctrines, but rather the narratives, parables, and similes extensively used by the Buddha are aimed at illustrating the intrinsic saving virtues of the Buddhist teaching, and particularly of this book, whoever believes it (Canevascini, 1993, 9). Still, the Sogdian version does not agree closely with any other known recensions and must therefore be a free adaptation, again possibly based on the most popular Chinese version, *Sengqiezha jing* (僧伽吒經; **Saṅghāṭasūtra*; T. 423).

A parable about two brothers is also known in a Sogdian version, but its source has not been identified. It involves two men from the same town: one a rich fisherman and the other a poor farmer (Yoshida Yutaka, 2009a). Another unidentified story about a dispute between the Buddha and heretics is attested by 12 fragments from the Russian collection. King Bimbisāra and Upaka also play a role in the story (Sims-Williams, 1981; Livšic, 1996). In another fragment from the German collection, King Prasenajit poses a question to the Buddha concerning the time when the *cakravartin*-king appears. The king's question and the Buddha's answer are closely paralleled by a passage in the *Abhidharmakośabhāṣya* (T. 1558 [XXIX] 64b19–20, 25–27; Yoshida Yutaka, 1986, 519).

One unique fragment is the bilingual text of the *Divyāvadāna* in Sanskrit and Sogdian, both written in Brahmi script (Sims-Williams, 1996, 307).

Major Mahāyāna *Sūtras*

Sogdians were also keen on translating major Mahāyāna *sūtras* popular in China and Central Asia. *Sūtras* belonging to the Prajñāpāramitā literature are the *Vajracchedikā* (*Jingang banruoboluomi jing* [金剛般若波羅蜜經]; T. 236; two mss.: Müller & Lentz, 1934, text 8 [the colophon indicates that the scribe bears an Uighur name, Qutlaγ]; MacKenzie,

to the Prajñāpāramitā literature
edikā (*Jingang banruoboluomi jing*
經]; T. 236; two mss.: Müller &
8 [the colophon indicates that the
ighur name, Qutlaγ]; MacKenzie,

1976;), *Pañcaviṃśatisāhasrikāprajñāpāramitā* (*Mohe banruoboluomi jing* [摩訶般若波羅蜜經]; T. 223; two mss.: Yoshida Yutaka, 1986; Kudara & Sundermann, 1988), and *Prajñāpāramitāhṛdaya* (*Banruoboluomiduo xin jing* [般若波羅蜜多心經]; T. 251; Reck, forthcoming a). Two unidentified commentaries of the Chinese version of the *Vajracchedikā* are found among the Turfan fragments, in which the quotations from the *sūtra* have been identified (see Yoshida Yutaka, 2009b; Reck, 2013). One is called the *ßẓ'yrn'y pr'tny' wyδß'γ* (Treatise on the Wisdom [*prajñā*] of *Vajra*), and the other is called the *ßz'yrn'k wyδß'γ* (Treatise on *Vajra*).

The Sogdian translation of the Mahāyāna *Mahāparinirvāṇamahāsūtra* (*Da banniepan jing* [大般涅槃經]; T. 374) is represented by as many as four different manuscripts. Thus, the *sūtra* was obviously very popular among the Sogdians (see Müller & Lentz, 1934, texts 10, 10a; Utz, 1976; Sundermann, 2008; 2010; Yoshida Yutaka, 1994a; 2013b). The *Da banniepan jing houfen* (大般涅槃經後分; Latter Part of the *Mahāparinirvāṇamahāsūtra*; T. 377) is also found (see Yoshida Yutaka, 1995). Two independent recensions of the *Vimalakīrtinirdeśa* (*Weimojie suoshuo jing* [維摩詰所説經]; T. 475) have survived; one from Dunhuang (MacKenzie, 1976) and the other from Turfan (Reck, 2012). Similarly, two recensions of the *Gaṇḍavyūhasūtra* have been identified; one from Dunhuang based on *Da fangguang fo huayan jing* (大方廣佛華嚴經; T. 278; P 20; see Yoshida Yutaka, 2013a) and the other from Turfan based on a similarly titled *Da gangguang fo huayan jing* (T. 279; see Yoshida Yutaka, 1986). The latter is unique in that out of the adventures of the protagonist Sudhana, only the places and people that Sudhana visited are translated, and all the other parts in between are omitted. Two manuscripts of the *Viśeṣacintibrahmaparipṛcchā* (*Siyi fantian suowen jing* [思益梵天所問經]; T. 586) have also been identified, one unearthed at the archaeological site of Shorchuq (present-day Qigexing; Kudara & Sundermann, 1991) and the other in Turfan (Kudara & Sundermann, 1998), but we still do not know whether the two are independent recensions.

Among the fragments discovered in Turfan, one finds one *poṭhī* folio of the *Sukhāvatīvyūha* (*Foshuo wuliangshou jing* [佛説無量壽經]; T. 360; see Yoshida Yutaka, 2010), one scroll fragment of the *Suvarṇabhāsottama* (*Jinguangming zuisheng wang jing* [金光明最勝王經]; T. 665; see Müller & Lents, 1934, text 7), and another scroll fragment of the *Guanding qiwanerjian shenwang hu biqiu zhou jing* (灌頂七萬二千神王護比丘呪經; *Sūtra* on the Spells of Consecration of 72,000 Godly Kings Guarding Monks; T. 1331; see Ragoza, 1980, text 57; Yoshida Yutaka, 2009a). One of the longest scrolls in Sogdian is that of the *Guanfo sanmeihai jing* (觀佛三昧海經; *Sūtra* on the Ocean-like Samādhi of the Visualization of the Buddha; T. 643), generally referred to as the *Dhyāna* text, a Dunhuang text comprising 404 lines.

Texts Based on Chinese Apocryphal *Sūtras*

As mentioned above, the *'krtyh 'nß'nt ptwry pwstk* (*Sūtra* of the Causes and Effects of Actions) was translated from a Chinese apocryphal *sūtra*, as was the *Da fangguang huayan shi'e pinjing*. Similarly, Sogdian renderings of some other apocrypha are known. It is interesting to note that they are all texts often cited in the contemporary Chan (禪) literature in Chinese: two manuscripts of the *Fawang jing* (法王經; T. 2883), one from Turfan (see Yoshida Yutaka, 1985a) and the other from Dunhuang (Pelliot sogdien 23; see Yoshida Yutaka, 2009a). The so-called *Dhūtasūtra* has turned out to be the translation of the *Fo wei xinwang pusa shuo toutuo jing* (佛爲心王菩薩説頭陀經; The *Sūtra* Expounded by the Buddha for Bodhisattva Cittarāja; T. 2886; MacKenzie, 1976, 33–51; see Yoshida Yutaka, 1996). A passage from the *Jiujing dabei jing* (究竟大悲經; The *Sūtra* on the Ultimate Great Mercy; T. 2880) is cited in Pelliot sogdien 9 (Yoshida Yutaka, 1984). Pelliot sogdien 16 expounds *śūnyatā* (emptiness) and seems to be related to Chan Buddhism (see Yoshida Yutaka, 2009b, 316–317). This short Sogdian text follows a Sanskrit text of the *Prajñāpāramitāhṛdaya* and the Sogdian rendering of the last mantra: *tadyathā oṃ gate gate parāgate parasaṃgate bodhi svāhā* (Bailey, 1951). Moreover, a colophon is provided in Uighur, and the text seems to be dated to the 10th century.

Employment of Chinese Texts

Although these are not Sogdian Buddhist texts properly speaking, that Buddhist Sogdians read and copied texts in not only Sogdian but also Chinese is known from those Buddhist Chinese texts that are phonetically transcribed in Sogdian script. Three such texts have been published. One is a text in which a passage from *Dasheng qi xin lun* (大乘起信論; Awakening of Faith in the Mahāyāna;

T. 1666) is cited (see Yoshida Yutaka, 2013a). The transcriptions are accompanied by corresponding Chinese characters. The Chinese pronunciation reflected in the transcriptions suggests that it was produced in the early 8th century CE. The second is the transcription of the *Jingang wuli wen* (金剛五禮文; Five Salutations to the *Vajracchedikā*), a popular Chinese text in 10th-century Dunhuang. The third is a small fragment containing the *Liangchao fu dashi song jingang jing* (梁朝傅大士頌金剛經; T. 2732; *Vajracchedikā* Provided with Verses Composed by Fu Dashi of the Liang Dynasty; Hirose Fumitoshi, 2010). On the reverse side of a Chinese Buddhist text, a Sogdian rendering of the title of the Chinese text is found (see Yoshida Yutaka, 2009a). Another Chinese text bears a colophon written by a Sogdian named Shi Lushan (石禄山), who copied the *sūtra* itself to share the merits with his family (Yoshida Yutaka, 2009a).

Local Literatures: Tangut/Xixia

In 1038, Nangxiao (曩霄) of the Weiming (嵬名; *Nywe*^{2} *mji*^{1} [㒓𗁬]) clan of the Dangxiang (党項) tribe, otherwise known as Li Yuanhao (李元昊; 1003–1048), officially accepted the imperial insignia and proclaimed the establishment of the Tangut Empire. "The Great State of White and High" (*Phiow*^{1} *bjij*^{2} *lhjij*^{2} *tha*^{2} [𘟣𗼃𗴂𗂧]; *Da baigao guo* [大白高國]; or Great Xia/Daxia [大夏]) as the Tanguts themselves called their empire, or the Western Xia (Xixia [西夏]) as it emerges from the Chinese sources, existed until 1227, when Tangut power was overwhelmed by the Mongols during the second Tangut raid of Genghis Khan (1162[?]–1227). At the zenith of its power, the Tangut Empire occupied the areas of the modern Chinese provinces of Ningxia, Gansu, eastern Qinghai, northern Shanxi, northeastern Xinjiang and southwestern Inner Mongolia, as well as the southernmost region of Outer Mongolia. Despite the short time span of the empire, Tangut civilization had a lasting impact on other Central Asian nations. One of the major dimensions through which the Tangut heritage demonstrated its vitality was Buddhism. The continued publication of Buddhist texts in the Tangut language and script after the fall of the Tangut Empire is one testimony to this prolonged influence.

The Discovery and Cataloguing of Tangut Buddhist Texts

The field of Tangut studies remained on the margins of Sinology until Colonel P.K. Kozlov's expedition to Khara-Khoto in 1908–1909 uncovered a vast trove of various texts and fragments of mostly but not exclusively Buddhist nature written in the Tangut script. These findings are now kept in the Institute of Oriental Manuscripts, Russian Academy of Sciences, Saint Petersburg. As news of Colonel Kozlov's discoveries spread, others went to Khara-Khoto, such as Sir Aurel Stein, who sent back a rich cache of Tangut materials that is now housed in the British Library.

Other discoveries of Tangut texts were made in 1917 in Lingwu (靈武) county in Ningxia (寧夏); as well as in Dunhuang during the first decades of the 20th century; the findings are currently housed in the National Library of China (Zhongguo guojia tushu guan [中國國家圖書館]), the National Palace Museum, and the Library of Beijing University. Other materials belonging to the Tangut textual heritage are scattered around numerous provincial libraries in China (Du Jianlu, 2007, 23–39; Nie Hongyin, 2014, 37–65). Minor repositories of Tangut texts are to be found in libraries and collections in Japan, Sweden, Germany, the United States, and France. Recent important discoveries were made in the Buddhist caves of Shanzui gou (山嘴溝; see *Shanzui gou Xixia shiku*, 2007) and in the basement of the Square Pagoda (Fangta [方塔]) in Baisi gou (拜寺溝; see *Baisi gou Xixia Fangta*, 2005), both in the present-day Ningxia Autonomous Region.

Findings from Ningxia-Hui, Baisi gou, and Shanzui gou are generally datable to the Xixia period (the time span covered by the colophons of the Khara-Khoto texts is from 1084 to 1225; Kychanov, 1999, 23–27), though some texts probably belong to the early Yuan. Despite the discovery of presumably early Tangut texts in Dunhuang (e.g. the Tangut translation of the *Platform Sūtra* of the Sixth Patriarch, roughly datable to the 1070s; Solonin, 2008, 64–127) the majority of textual discoveries at locations other than Khara-Khoto, Baisi gou, and Shanzui gou belong to the Yuan period. Another deserted Tangut city, known as Lücheng (綠城), not far from Khara-Khoto, might still reveal some more texts of the Xixia period. The absolute majority of the discovered texts are various Buddhist cómpositions.

During the early 1930s, N.A. Nevskij started the first inventory of the Tangut texts in Saint Petersburg and made initial observations concerning the composite Sino-Tibetan nature of the Tangut collection (Nevskij, 1960). His work was continued later by Z. Gorbacheva and E.I. Kychanov (1963) and by Nishida Tatsuo (1975–1977; 1999). The first catalogue of Tangut Buddhist texts from Saint Petersburg was published in 1999 (Kychanov, 1999). The first catalogues of Tangut Buddhist texts preserved in China were prepared by Zhou Shujia (1932, 323–325) and Luo Fucheng (*Xixia studies* 6, 2007, 373–398). The Chinese-language Khara-Khoto texts held in Saint Petersburg were catalogued by L.N. Men'šikov (1984).

The total number of Buddhist texts in the Tangut language worldwide is not easy to determine. The Khara-Khoto collection in Saint Petersburg amounts to 374 independent titles under 768 call numbers as catalogued by E.I. Kychanov (1999, 730–738), which covers around half of the extant texts and fragments. If other titles as well as duplicates and variant versions of texts available from both Khara-Khoto and other repositories are considered, then the total number of texts and fragments would approach or even exceed ten thousand.

Historical Setting

The Tangut Empire occupied the areas in the loop of the Yellow River and extended as far as Dunhuang and Liangzhou (涼州; modern-day Wuwei [武威]) in the west. The eastern neighbors of the Tangut state were the powerful empires of the Kitan Liao (遼; 916–1123) and Jurchen Jin (金; 1123–1234). Before the demise of the Liao, with which the Tanguts maintained a close relationship and which was largely Buddhist (Fujiwara, 2015; Solonin, 2013, 171–219), the Tangut Empire bordered the Northern Song. Tangut-Chinese relations collapsed when the Jin occupation of Shaanxi severed direct communication between the Tangut lands and the Song. Beginning in the 1130s, the Tangut Empire incorporated the territories around Lake Qinghai, known as Amdo and Khams (*Xixia Tongshi*, 2005, 282–288).

The unique historical and geographical settings of the Tangut Empire in many ways determined the unique outlook of Tangut Buddhism and the Tangut Buddhist literature. The Hexi (河西) area in general and Liangzhou and Dunhuang in particular had been major hubs of Sinitic Buddhism since at least the 4th century CE. The Tangut heartland in the Helan Mountains (賀蘭山) was a well-known Buddhist center where Chan Buddhism had flourished at least since the 8th century CE; this area attracted famous monks such as Baotang Wuzhu (保唐無著; 714–774 CE). In the east, Wutaishan (五台山) provided a major source of Buddhist inspiration: Chinese sources mention the numerous requests for permission to make pilgrimages to Wutaishan by Tangut authorities before the official establishment of the Tangut state. Tangut reverence for Wutaishan culminated in the establishment of their own version of the sacred site, in the vicinity of their capital Xingqing (興慶; modern-day Yinchuan [銀川]; see Shi Jinbo, 1988, 118–119). The position of the Tangut lands en route to Wutaishan included the empire into the Buddhist pilgrimage network and made the Tanguts open to a variety of Buddhist influences.

The ethnic composition of the Tangut Empire included Uighurs, Tibetans, Chinese, the Kitan, and elements of the once powerful Tuyuhun (吐谷渾) tribe, and the languages of these people were spoken in the empire. The Tanguts maintained contacts with Khotan and other Central Asian states. Almost every nation living in and around Xixia developed its own script, and the Tanguts themselves were no exception. Despite its visual similarity with the Chinese characters, the Tangut script was designed to render the morphology and syntax of a Tibeto-Burman language very different from Chinese.

To the southwest from Xixia, the 10th to the 12th centuries were a period of rekindling Buddhism in Tibet. This process was at least partially initiated in the Tangut lands shortly before the Tangut Empire was proclaimed ('Gos lo tsā ba, 2001, 57–58). After the demise of the Liao and the Jin conquest of the former Chinese-Tangut borderland, the focus of Tangut imperial politics shifted toward expansion to the west, into the then fertile lands around Lake Qinghai and the areas of eastern Tibet, whose Tibetan population was also Buddhist (Iwasaki, 1993, 17–37). Thus the westward advancement of Tangut in the early 12th century encountered the opposite eastward vector of Tibetan Buddhism, which, as the sources in a variety languages indicate, was emerging as a major form of Buddhism in Central Asia during the 12th–13th centuries (Shen Weirong, 2013a, 43–93).

While both Sinitic and Tibetan mainstreams are easily discernible within the Tangut Buddhist heritage, Buddhism in Xixia developed along its own lines and thus is an independent object of scholarly attention. Systematic study of Tangut Buddhism is only beginning, and therefore many hypotheses that seem highly probable still need verification, and many observations concerning the nature of Tangut Buddhism are now being reevaluated.

Buddhist Translations and Buddhist Policy in Xixia

The texts recovered from former Tangut territory are written in three languages: the most numerous are the texts in Tangut, followed by texts in Chinese, while the least numerous are those in Tibetan. This multilingual textual production reflected the multiethnic composition of the population of the Tangut Empire. Historical circumstances determined the division of the Tangut Buddhist texts into two major groups: those translated from Chinese and those translated from Tibetan originals. The Tangut texts of Sinitic Buddhism generally relied on written source texts, whereas the compositions of Tibetan subject matter (especially various liturgical and ritual writings) were sometimes based on "oral transmissions" by various Tibetan masters. Thus, these texts were originally composed in the Tangut language alone or sometimes in both Tangut and Chinese (Suo Luoning, 2013, 243–247; see below); the exact Tibetan originals of such texts probably will never be found. Texts composed in Xixia by Tangut Buddhists also belong to the realms of Sinitic or Tibetan Buddhism; therefore they are not easily discerned from the translations of hitherto unknown originals.

The present article concentrates on the texts in Tangut. In discussing specific texts, the Tangut version of a text's title is provided, together with its transcription based on the phonetic reconstruction by Hwang cherng Gong (龔煌城); titles of Sanskrit, Chinese, or Tibetan originals are cited together with the numbers from Taishō Tripiṭaka (T), Beijing (P), and Derge (D) editions of the Tibetan Buddhist canon; for well-known texts, the Tangut titles are omitted. Numbers according to E.I. Kychanov (Kych) are provided for all Tangut texts. In cases in which the title of the Chinese or Tibetan original is unknown (or if it is an original Tangut work), the title is translated. The following exposition is based on the textual repertoire available from Khara-Khoto with occasional references to other repositories of the Tangut texts.

Tangut Practices of Translation

The stele inscription *Daxia guo zang sheli jieming* (大夏國葬舍利碣銘; Great Xia Inscription on Burying *Śarīra* [i.e. Buddhist Relics]; dated 1038) speaks of the first Tangut emperor Yuanhao as one who "reveres with folded palms and protects the precious realm of the Vajrayāna, [and] majestically reveres the way of the Buddha." The stele also calls the emperor "the inventor of the *fan* [番; i.e. Tangut] script" (see *Xixia Studies*, 2007, 87; Dunnell, 1995, 39). This record reveals the close relationship between the invention of the Tangut script and the initial propagation of Buddhism in the Tangut Empire. All the available sources are unequivocal in stating that the Tangut emperors were vigorous supporters of Buddhism and promoted large-scale Buddhist activities in their empire, including publication of the Tangut, Chinese, and Tibetan version of various compositions under imperial supervision.

Examples of privately produced texts and of the texts published (or commissioned) by the temples are also numerous in the Tangut collections; manuscript copying of *sūtra*s was a widespread practice among the Tanguts as well (Nishida, 2012a, 371–397).

Generally, the history of the Buddhist translations in the Tangut Empire can be divided into three periods: the initial translation during the 11th century, followed by a period of revision and new translations during the 12th century, and the final years of Xixia, when the Buddhist translations and publications became even more associated with the "state-protection" policy in the wake of the second Mongol offensive, as one can indirectly infer from the preface to the revised edition of the *Suvarṇaprabhāsasūtra* (Golden-Light *Sūtra*) from 1214 (Shi Jinbo, 1988, 48–49, 230–231).

Colophons and prefaces to surviving Tangut publications are the basic sources concerning the translation and distribution of Buddhist texts in the Tangut Empire. Two of the most informative are the Tangut texts of the *Miaofa lianhua jing xu* (妙法蓮華經序; Preface to the *Sūtra* of the Lotus of the Good Law), dated to the period of 1049–1069 (Nishida, 2012b, 191–192; Shi Jinbo, 1988, 234–236), and the preface to the Tangut translation of the *Guoqu zhuangyan jie qian foming jing* (過去莊嚴劫千佛名經; T. 446a–b) published in 1312 (Shi Jinbo, 1988, 316–324), that is, after the demise of the Tangut state. Other important sources include the aforementioned preface to the *Suvarṇaprabhāsasūtra* from 1214 and another preface to the same text by Yixing Huijue (一行慧覺; ?–1314[?]), an important Tangut monk active during the Yuan. This preface is dated to 1247, that is, also after the fall of Xixia (Shi Jinbo, 306–309). One more important source is the so-called "Preface to the Five *sūtra*s" found in the Tangut edition of the Mahāsāhasrapramardanasūtra.

All sources agree that the project of translating Buddhist texts into Tangut was initiated by the first Tangut emperor, Yuanhao. The preface to the *Guoqu zhuanyan jie qian foming jing* states that the emperor appointed a group of 32 translators supervised by the state preceptor *Phie*^{1} *Tsjiir*^{1} *dźiej*^{2} ([illegible]; 白法信; *Bai Faxin; the first syllable is a phonetic transcription, whereas the last two are the monastic name *Dharmaśraddha) and by the monk *Sjij*^{2}*bji*^{1} ([illegible]; 智光; *Zhiguang [智光]; *Prajñāprabha). The surname Bai (白) often indicates Uighur ethnicity (Yang Fuxue & Chen Aifeng, 2011, 156–166), thus

the information from the preface accords with the epigraphical sources, which mention that Uighur monks originally were in charge of translating Chinese texts into Tangut. The translation project was initially carried out in the Gaotai si (高台寺), established in 1047 (Shi Jinbo, 1988, 316–324), and the Chengtian si (承天寺). Apart from the imperial family itself, Buddhism in Xixia was promoted by two major clans, the Mozang (沒藏) and the Liang (梁); these were the clans of empresses dowagers who controlled Tangut politics during the reign of the young emperors Liangzuo (諒祚; 1047–1067) and Bingchang (秉常; r. 1068–1086; see *Xixia Tongshi*, 2005, 220–240).

The preface to the *Guoqu zhuangyan jie qian foming jing* further indicates that during the 53 years following the year 1038, 3579 *juan* (fascicles) of Buddhist texts belonging to both the Mahāyāna and the Hīnayāna were produced (Shi Jinbo, 1988, 322). The texts were later corrected on the basis of the so-called Northern and Southern *sūtras* (probably meaning the Liao and Chinese editions of the Buddhist canon) during the rule of the "City-Protecting Emperor" (*Hu cheng di* [護城帝]; *wejr¹ we¹ dzjwi²* [𘟙𘟚𘟛]) – this title in all probability represents the fifth emperor, Renxiao (仁孝; 1139–1193).

The imperial patronage of Buddhist translations manifests in editorial remarks such as "imperially translated" (*mee² lhej²* [敍𘟜]; i.e. *yuyi* [御譯]), "imperially revised" (*mee² njar¹* [敍𘟝]; i.e. *yujiao* [御校]), or "translated by the imperial order" (*zur² bju¹ lhej²* [𘟞𘟟𘟜]; i.e. *fengzhao yi* [奉詔譯]) found on the printed Buddhist texts in both Tangut and Chinese. Manuscript copies made from the woodblock prints also reproduced these remarks.

Although one might doubt the actual participation of the emperors in the daily translation routine, there is evidence that at least the third Tangut emperor, Bingchang, and his mother, Empress Dowager Liang, symbolically supervised the translation process. The famous Tangut engraving known as Translation of the *Sūtras* (*yijing tu* [譯經圖]), now in the National Library of China (Shi Jinbo, 1988, 307, 311), contains images of them both taking part in a translation session (*yijing chang* [譯經場]) supervised by the monk *Sjij²bji¹* (see above). This evidence is corroborated by the text of the preface to the *Suvarṇaprabhāsasūtra* from 1247, in which Bingchang and his mother are mentioned as the chief translators of the text.

Judging from the available evidence, two types of translation procedures were employed in the Tangut translation project. As the engraving Translation of the *Sūtras* implies, in translating Chinese scriptures, the Tanguts adopted the Chinese practice of translation sessions, in which a translation was produced through the collective effort of several experts. This is probably one of the reasons that Tangut translations from the Chinese are in most cases anonymous. One such translation session is described in the preface to the *Suvarṇaprabhāsasūtra*. The text indicates that due to the inadequacy of previous translations, a new "translation session" (*lhej² ·io̧¹* [𘟜𘟠]; i.e. *yichang* [譯場]) was established under the guidance of the State Preceptor, "expert in Tangut and Chinese Dharma," the "head of Tangut translations" (*mji² lhej² ·wə¹* [𘟡𘟜𘟢]; *fanyi zhu* [番譯主]), and others (Shi Jinbo, 1988, 280–283; there is some ambiguity concerning the identity of the figures involved). The translation was completed on the basis of a careful comparison of previous Tangut versions, Chinese versions, and commentaries.

In most cases, however, the colophons to the Tangut publications only mention the names of the translators of the text into Chinese, such as Kumārajīva (343–413 CE) or Xuanzang (玄奘; 602–664 CE); such titles as Master of Chinese *Sūtras* (*Zar¹ tshji² rejr² u² tsjiir¹ dzjiij²* [𘟣𘟤𘟥𘟦𘟧𘟨]; *Han qijing zang fashi* [漢契經法師]) occur in reference to the translators of the Chinese source texts and not the Tangut translators (e.g. Kychanov, 1999, 45).

The penetration of Tibetan Buddhism into Xixia initiated the introduction of a new translation procedure that implied cooperation between a certain master and a translator (or group of translators), as was the normal practice in Tibet. The master "transmitted" (*deej¹* [𘟩]; *chuan* [傳]), "collected" (*śioo¹* [𘟪]; *ji* [集]), or sometimes "composed" a text that was then translated into Tangut by a specific disciple or a group of disciples. Tibetan and Indian masters were often identified as "experts in the five Indian wisdoms" (*lji mə¹ ŋwe¹ bju¹* [𘟫𘟬𘟭𘟮]; **Xitian wuming* [西天五明]) or experts in the "Tibetan Tripiṭaka" (*lji¹ phə² gu² ljij² so̧¹ u²* [𘟫𘟯𘟰𘟱𘟲𘟦]; *Xifan Zhongguo Sanzang* [西番中國三藏]) or "translators" (*lu² tśja¹ wa¹* [𘟳𘟴𘟵]; *lo tsā ba*). Sometimes the Indians and Tibetans bear Tangut official titles of state preceptors or imperial preceptors, whereas their Tangut collaborators emerge under a variety of honorary and official titles. In many cases different titles in fact indicate various stages of the career of a single person (Dunnell, 2009, 41–78).

The Tangut practice of translating Buddhist scriptures included the official certification of the correctness of a translation; when available, the texts were checked against their Sanskrit originals.

The certification was carried out by the members of the Tangut Buddhist administration (the so-called Office of Virtue, the *Gongde si* [功德司]; see Shi Jinbo, 2014, 139–157): such titles as Head of Tangut Translations and Verifier of the Meaning of Translated *Sūtras* (*Lwər^2 rejr^2 lhej^2 wo^2 ljạ^1* [[illegible]]; *yijing zhengyi* [譯經證義]; Kychanov, 1999, 688) are often accompanied by an indication that the holders of these titles were officials in the *Gongde si*. Sometimes the translation procedure implied double translation, from Sanskrit to Tibetan and then into Tangut, or a translation based on the Tibetan version and the Sanskrit original. The most famous Indian in the Tangut Empire, Jayānanda (*fl.* mid-12th cent.), verified his translations before authorizing them. The Tangut translation of the *Śjɨj^2 buu^2 zjɨr^1 tjij^1 rewr^2 njɨ^2 tśhja^2 ioow^1 ljị^1 śjoo^1 ljaa^1* [[illegible]]; *Prajñāpāramitāratnaguṇasaṃcaya gāthā*; *'Phags pa shes rab pha rol tu phyin pa sdud pa tshigs su bcad pa*; Kych 371–379; D 13/P 735; see Duan Yuquan, 2014) mentions that it was personally checked by Jayānanda according to the Sanskrit text (Kychanov, 1999, 483). Another version of the same text indicates that it was retranslated on the basis of an "Indian commentary."

As mentioned above, some of the texts imported from Tibet were also translated into Chinese (Shi Jinbo, 1988, 56–57). One well-known example is *Tha^1 tshjij^1 śjɨj^2 tha^2 ·u^2 sọ^1 bju^1 tjị^1 lwər^2 rejr^2* ([illegible]; i.e. the translation of *Triśaraṇagamana*; *Gsum la skyabs su 'gro ba*; D 225/P 891), which was also translated into Chinese (Shi Jinbo, 1988, 55–56). This practice applied not only to the *sūtras* but also to the liturgical and ritual compositions, such as an esoteric scripture translated from Tibetan as *Upadeśa of All Tathāgatas in the Hundred Syllables* (*Mjor^1 ljij^2 ŋowr^2 ŋowr^2 jij^1 ·jir^2 dji^2 tshji^1 ŋwuu^1* [[illegible]]; **Rulai yiqie zhi bai zi yaoyu* [如來一切之百字要門]; Kych 292). According to the colophon, this text was transmitted by the imperial preceptor *Dwewr^2 swew^1* ([illegible]; *Jueming* [覺明]) – probably identical with *Chos kyi seng ge (see below) – and others, then translated from Sanskrit (into Tibetan?), and finally translated into both Tangut and Chinese. Such examples can be multiplied.

The corpus available in the Tangut language includes all the basic categories of Buddhist literature. However, evidence suggests that the first to have been translated into Tangut were fundamental Mahāyāna *sūtras* and Sinitic repentance rituals (Suo Luoning, 2014, 22–39). Due to chronological priority, basic Mahāyāna terminology found in the Tangut translations of Buddhist texts is based on the Sinitic Buddhist vocabulary. Some Tangut terms are phonetic reproductions of the Chinese transcriptions of Indic words, whereas others are translations of Sinitic terms into Tangut. Translations from Tibetan in many cases use this terminology as well.

Tangut Legal Regulations and Formation of the Buddhist Corpus

Tangut legislation contains several stipulations that have determined the composition of surviving Tangut Buddhist literature. The Tangut *Revised and Newly Promulgated Law Code of Tiansheng Reign Period* (1150) preserves important information on the textual and doctrinal repertoire of Tangut Buddhism. According to this code, the level of monastic competence was assessed by the office of the prime minister (*zhongshu* [中書]; Arakawa, 2014, 62–64).

The *Tiansheng Code* discriminated between Tangut-Tibetan and Chinese-speaking monastic communities. The *Code* stipulates that candidates for the leading positions in monastic communities (Chinese or Tangut-Tibetan-speaking) were required to be able to explain the doctrines of "Prajñāpāramitā (*pa2 żja2* [漬儀], *bore* [般若]), "Vijñānavāda (*lew2 sjij2* [燠懦], *weishi* [唯識]), "Mādhyamaka (*gu2 tśjaɪ* 輜噥, *zhongdao* [中道]) and the "Hundred Dharmas" (*·jir2 tsjüri* [illegible], *baifa* [百法] i.e., Abhidharma). Other teachings included the *Buddhāvataṃsaka* (*wjaɪ ljuu2* 塢衡, *Huayan* [華嚴]) and *The Awakening of Faith* (*tha2 ·u2 dźjij śjwoɪ ljɨɪ* 棒羌由囝彤, **qi xin* 起信). This doctrinal repertoire fully emerges among the available Tangut texts translated from either Chinese or Tibetan (see below). This division resembles the structure of the Buddhist canon and applies to both the Chinese and Tibetan Collections of Buddhist texts. Of special interest here is the category of the "Awakening of Faith," which probably was introduced by the Tanguts for the texts dealing with generation of the *bodhicitta*: texts of this category are widely represented in the Tangut collections worldwide.

The list of texts mandatory for members of both the Tangut-Tibetan and the Chinese Buddhist communities numbered 11 texts for each type of community; seven of these texts overlap. The list of texts includes the [*Sūtra*] *of the Humane King for State Protection* (*dźjwu^{1}mjɨ^1·wejr^2 lhjij^2* [[illegible]]; *Renwang Huguo* [仁王護國]; Kych 65–67; T. 246), *Mañjuśrīnāmasaṃgīti* (*mã^1 śju^1 źjɨr^1 ɣiej^1* [[illegible]]; *Wenshu Zhenshi ming* [文殊真實名]; Lin, 2006), "Chapter on the Vows of Samantabhadra" (*nji^2 mee^2 dźjɨ tjị^1 tjij^1* [[illegible]]; *Puxian Xingyuan pin* [普賢

The latter title probably indicates the Tangut translation of *Aṣṭasāhasrikāprajñāpāramitā* based on the Chinese text of *Foshuo Fomu chusheng san fazang bore boluomiduo jing* (佛說佛母出生三法藏般若波羅蜜多經; T. 228; Kych 22–31) translated by Shihu (施護) during the Northern Song and its Tibetan counterpart (P 734/D 13). Other mandatory texts include the *Mahāsāhasrapramardanasūtra* (*Stong chen po rab tu 'joms pa*; D 558 = 1059/P 177; Kych 214–230), as well several other scriptures generally associated with the ideology of "state-protection."

Other texts include the "Gāthā of State Protection" (*lhjịj^{2} ·wejr^{2} tśjụ^{1} gjuu^{2} rjur^{1} ljaa^{1}* [隫㶆𗒘𗗚𗈪𗂸]; currently unidentified), "Chapter on the Universal Gate of Avalokiteśvara" (*rjur^{1} ɣiẹ^{2} bioo njɨ^{2} lụ^{1} tjịj^{1}* [𗈪𗏹𗇋𗘅𗖵𗒘]; *Guanshiyin Pumen pin* [觀世音普門品]; available in a variety of copies), the *Vajracchedikā Prajñāpāramitā* with verses (Kych 634–635), and *Uṣṇīṣavijayadhāraṇī* (*tha^{1} tśjɨw^{2} pjụ^{1} zji^{2} jịj^{1}* [𗀔𘃡𘓐𗦇𗥂]; *Foding Zunsheng tuoluoni* [佛頂尊勝陀羅尼]; Kych 335–340; T. 967, 968, etc.) as well as not easily identifiable texts such as the "Laudation for Śākyamuni" and the "Great Ritual" (*tha^{2} tshwew^{1} kjụ^{1}* [𗉣𗦳𗣼]; *da gongyang* [大供養]; Arakawa, 2014, 4–55, 62–65). The above doctrinal and textual repertoire emerges almost completely in the Khara-Khoto findings. Since the title of the *Tiansheng code* states that it was "revised and newly promulgated," one may infer that the list of mandatory texts existed at least throughout the 12th century and the Buddhist teachings mentioned therein circulated in the Tangut state at the same time.

Another major factor that determined the character of extant Tangut Buddhist literature was the Buddhist faith of the Tangut imperial family. Colophons indicate that during major national Dharma assemblies (the biggest one probably took place in 1189 for the 50th anniversary of Renxiao's enthronement), such texts as the *Guan Mile pusa shangsheng Doushuai tian jing* (觀彌勒菩薩上生兜率天經; T. 452), the *Vajracchedikā Prajñāpāramitā*, the "Vows of Samantabhadra," and the *Sūtra of the Humane Kings* were published in Tangut, Chinese, and Tibetan in thousands of copies for distribution among the participants in order to generate merit for the deceased members of the imperial clan and secure the well-being of the empire (Shi Jinbo, 1988, 40–41; Suo Luoning, 2014, 22–39). These texts, found in multiple copies, constitute a substantial part of the Khara-Khoto collection (esp. in Chinese).

Extant Tangut texts belong to a variety of categories of Buddhist literature including *sūtras*; Vinaya; and various types of commentaries, exegetical treatises, liturgical manuals, and contemplation guides. Unlike the *sūtras* that circulated both as printed texts and as manuscripts, the majority of commentarial and liturgical literature is in manuscript form; there are only a few examples of printed publications of these genres.

In what follows I specify a category of fundamental scriptures, which includes the translations of the basic *sūtras*; Vinaya texts are also included into this group. A second category, of nonscriptural sources, covers major exegetical treatises and commentaries. A third category includes texts associated with various "schools" or "traditions" of Sinitic and Tibetan Buddhism. Finally I briefly introduce literature on rituals, practices of contemplation, and yoga. This division is purely expediential. The survey concludes with a short discussion of the Tangut Buddhist canon.

Fundamental Scriptures

Scriptures Translated from Chinese

Chinese sources indicate six occasions on which a Great Collection of *Sūtras* (i.e. *Dazang jing* [大藏經], presumably a version of the *Kaibao zang* [開寶藏], published from 971 to 983 CE) was presented by the Song court in response to Tangut requests during the period of 1031–1073 (Shi Jinbo, 1988, 63, 335–336). Therefore it seems highly probable that in their translations of Buddhist texts from Chinese, the Tanguts were motivated by a notion of a *Dazang jing*. This is also suggested in their use of a specific term, *mji^{2} tha^{2} ·ụ^{2} lwər^{2} rejr^{2}* (𗼻𗉣𗖵𗦫𗔍; i.e. *Fan Dazang qijing* [番大藏契經]; The Great Collection of *Sūtras* in the Tangut [Mi] Language). This term is attested on the imperial seal attached to the text of the Tangut translation of *Dīrghāgama* (*Chang ahan jing* [長阿含經]; T. 1; Kychanov, 1999; 45; Kych 1; see also below).

Taken at face value, the Tangut data presented above means that before the end of the 11th century, important Mahāyāna scriptures were already translated into Tangut from Chinese. This observation is in line with the internal evidence derived from the Tangut publications: most of the texts attributed to Bingchang's and part of those attributed to

Qianshun's reigns bear the mark "translated" (*lhej* [[illegible]]; *yi* [譯]), whereas *sūtras* from later reigns, especially Renxiao's, are in many cases labeled "edited" or "revised" (*njar*^{2} [[illegible]]; *jiao* [校]; Kychanov, 1999, 15–18).

The repertoire of the texts translated during Bingchang's era includes basic Mahāyāna *sūtras* such as the *Mahāprajñāpāramitāsūtra* (*Da Boruo boluomiduo jing* [大般若波羅蜜多經]; Xuanzang's version), *Lotus Sūtra* (妙法蓮華經; generally based on Kumārajīva's version, the text apparently was edited several times in Tangut imperial history; Kych 8–19; Nishida, 2012c, 307–333, Nishida, 2005); other versions of the text are also available; *Vimalakīrtinirdeśa* (*Weimojie suo shuo jing* [維摩詰所說經]; Kumārajīva's version; Kych 159–164), *Buddhāvataṃsaka* (*Da fangguang fohuayan jing* [大方廣佛華嚴經] in 80 chapters; Śikṣānanda's version; Kych 84–90), Mahāyāna *Mahāparinirvāṇamahāsūtra* (*Da banniepan jing* [大般涅槃經]; Dharmakṣema's version; Kych 110–117), *Mahāratnakūṭasūtra* (*Dao Baoji jing* [大寶積經]; Kych 97–102), and the *Diamond Sūtra*. This list covers only texts with relatively clearly established dates; in reality, the repertoire of the *sūtras* translated during the 11th century might have been much broader.

Although Tangut Buddhism can be generally identified as Mahāyāna, the idea of the Tripiṭaka motivated the Tanguts to translate all categories of scriptures. Versions of Hīnayāna texts translated from Chinese and probably from Tibetan include the *Dīrghāgama*, *Fo Benxing ji jing* (佛本行集經; T. 190; Kych 6), and *Tha*^{1} *tshjij*^{1} *wee*^{1} *lja*^{1} *lwər*^{2} *rejr*^{2} ([illegible]; **Fo shuo shenglai jing* [佛說生來經]; Kych 343–345; probably a translation of the Tibetan version of *Jātakanidāna*, *Skyes pa rabs kyi gleng gzhi'i bstan pa*; D 32/ P 748).

The Tanguts also translated esoteric scriptures imported from the Northern Song. One such example is the *Tha*^{1} *tshjij*^{1} *śjij* ^{2} *gjij*^{1} *mja*^{1} *thow*^{1} *lo*^{1} *dzji*^{1} *lwər*^{2} *rejr*^{2} ([illegible]), which corresponds to the *Foshuo shengyaomu tuoluoni jing* (佛說聖曜母陀羅尼經; T. 1303; Kych 259–267, originally translated into Chinese by Fatian [法天]). The texts devoted to the cult of celestial bodies formed a specific group of cultic compositions, which apparently was very influential in the Tangut Buddhism.

The repertoire of Vinaya texts available in Tangut seems to be limited to the translation of the Chinese versions of Mūlasarvāstivāda Vinaya (e.g. Mūlasarvāstivāda *Ekaśatakarman*, *Genben shuo yiqie you bu bai yi jiemo* [根本說一切有部百一羯磨]; T. 1453; Kych 289) and the *Mūlasarvāstivāda (Nidāna)mātrikā*, *Genben shuo yiqie you bu* (*nidana mudejia* (根本說一切有部目得迦; T. 1452; Kych 288), produced originally by Yijing (義凈; 635–713 CE) during the Tang. This does not exhaust the Vinaya corpus known to the Tanguts: fragments of a variety of compositions on the Dharmaguptaka Vinaya circulated in Chinese.

Scriptures Translated from Tibetan

Beginning in the 1130s, the connections between Xixia and Tibet intensified just as the Tangut emperors became well-known as the patrons of Buddhism. The Tangut Empire turned into a major destination for Tibetan monks. The most prominent figures who made their way to Xixia include the Indian *paṇḍita* Jayānanda (*Dzja*^{1} *ja*^{1} *a nja*^{2} *djaa*^{1} [[illegible]; [illegible] 阿難捺]; mid-12th cent.; known as the first Tangut Imperial Preceptor; van der Kuijp, 1993, 188–197) and Sumatikīrti (*Sju*^{1} *mja*^{1} *tji*^{1} *kji*^{2} *rji*^{2} *tji*^{1} [[illegible]]; Wei Wen, 2013, 301–331).

Contacts with Tibet led to a revision of the previously existing versions of Buddhist scriptures. *Sūtras* "revised" during Renxiao's reign include the *Vimalakīrtinirdeśa*, *Mahāmayūrīvidyārājadhāraṇī*, and *Mahāprajñāpāramitāsūtra*, among other important scriptures originally translated during Bingchang's time. In some cases, the new translations and revisions from Renxiao's period betray growing dependence on the Tibetan and Sanskrit versions of the scriptures (Sun Bojun, 2010a, 8–15, 26–27). The revisions included changes in the usage of transcription rules for the *dhāraṇīs* and different usage of the personal pronouns, as has been demonstrated by Nishida Tatsuo for the Tangut translations of the *Lotus Sūtra* (e.g. Nishida, 2012b, 192–194).

The list of *sūtras* translated from Tibetan includes such works as *Mahāsāhasrapramardanasūtra* (*Stong chen po rab tu 'joms pa*; D 558 [= 1059]/P 177; Kych 214–230), *Mahāpratisarāvidyārājñī* (*'Phags pa rig sngags kyi rgyal mo so sor 'brang ba chen mo*; P 179/ D 561; Kych 239–252), *Vajracchedikā* (*'Phags pa shes rab kyi pha rol tu phyin pa rdo rje gcod pa*; P 739/D 16; Kych 380), and *Triśaraṇamgamana* (Kych 382–383; Nishida, 2012a, 390–393).

In some cases, we have editions which combine translations made from Tibetan and Chinese originals under one cover. One such example is the *Tha*^{1} *tshjij*^{1} *·a mji*^{1} *thow*^{1} *lwər*^{2} *rejr*^{2} ([illegible]; *Fo shuo Amituo jing* [佛說阿彌陀經]; T. 366). The most prominent figures who o Xixia include the Indian *paṇḍita* *ja*^{1} *a nja*^{2} *djaa*^{1} [[illegible]; 拶也 h cent.; known as the first Tangut tor; van der Kuijp, 1993, 188–197) *Sju*^{1} *mja*^{1} *tji*^{1} *kji*^{2} *rji*^{2} *tji*^{1} [[illegible] 13, 301–331).

Tibet led to a revision of the pre- versions of Buddhist scriptures. during Renxiao's reign include the *a, Mahāmayūrividyārājadhāraṇī,* *āpāramitāsūtra*, among other ures originally translated during . In some cases, the new transla- ns from Renxiao's period betray nce on the Tibetan and Sanskrit criptures (Sun Bojun, 2010a, 8–15, ons included changes in the usage les for the *dhāraṇīs* and different onal pronouns, as has been dem- ida Tatsuo for the Tangut transla- *ūtra* (e.g. Nishida, 2012b, 192–194). s translated from Tibetan includes *hāsāhasrapramardanasūtra* (*Stong* *ns pa*; D 558 [= 1059]/P 177; Kych *ratisarāvidyārājñī* (*'Phags pa rig* *o so sor 'brang ba chen mo*; P 179/ –252), *Vajracchedikā* (*'Phags pa* *rol tu phyin pa rdo rje gcod pa*; 380), and *Triśaraṇamgamana* shida, 2012a, 390–393).

we have editions which combine from Tibetan and Chinese origi- er. One such example is the *Tha*^{1} *lwər*^{2} *rejr*^{2} ([illegible]; *Fo* 佛說阿彌陀經]; T. 366). Among six the Tangut translation, one bears ial translation" of Bingchang and Liang, the colophon to another

---

text mentions the "imperial translation" by Renxiao, the colophon to the third version informs that it was printed and edited in. One publication contains not only a copy of the *sūtra* text, but also a copy of a Pure Land *sādhanā*, prepared with the cooperation of the famous Kashmiri Imperial Preceptor Jayānanda and a prolific Tangut translator Dehui (*Tśhja*^{2} *źjir*^{1} [[illegible]]; *Dehui 德慧; Kychanov, 1999; 354–356).

Translations of *tantra*s are underrepresented in the Tangut collections. Although some Tangut texts mention the "four types of *tantra*" (*ljɨɨr*^{1} *mə*^{2} *mər*^{2} *twẹ*^{1} [[illegible]]) as well as the two basic classes of *tantras*, namely *pha rgyud* (*so*^{2} *mər*^{2} *twẹ*^{1} [[illegible]]) and *ma rgyud* (*dẹ*^{1} *mər*^{2} *twẹ*^{2} [[illegible]]), and their transmission lineages (Solonin, forthcoming; Nishida, 1999, xl), none of these texts has been located so far. Titles and quotations from various *tantras* also emerge in the Tangut-period compositions in Chinese included in the Yuan-Ming collection of Buddhist texts *Dasheng yaodao miji* (大乘要道密集; *Dasheng*, 1983, 367–428).

Apart from quotations in various texts, a unique version of the Tangut translation of the *Saṃpuṭatantra* (*Gjuu*^{2} *rjur*^{1} *zji*^{2} *njɨ*^{2} *ŋwu*^{2} *phjoo*^{2} *mər*^{2} *twẹ*^{1} [[illegible]]; **Rgyud thams cad kyi gleng gzhi dang gsang chen dpal kun tu kha sbyor zhes bya ba'i rgyud kyi rgyal po*; D 1199/P 2329) is available from the finds in Baisi gou (Shen Weirong, 2010, 407–417). The cycle of *Cakrasaṃvaratantra* in Tangut is represented by a variety of ritual manuals, whereas the root *tantra* has not yet been identified. The same is true for the texts of the Hevajra cycle (see below).

Nonscriptural Sources

The Tangut Buddhist heritage includes a selection of texts that belong to various traditions of Sinitic and Tibetan Buddhism. A brief introduction to these texts might allow a better insight into the multifaceted nature of Tangut Buddhism. The genres identified within the corpus of Sinitic texts include *gjɨɨ*^{2} ([illegible]; *shu* [疏]; "expanded commentary"), *bjij*^{2} ([illegible]; *zhu* [註]; "commentary"), *phie*^{1} ([illegible]; *jie* [解]; "explanation"), *la*^{1} ([illegible]; *ji* [記]; "notes"), and *ka*^{2} ([illegible]), which represents the Chinese genre of *kepan* (科判; "schematic commentary"; see below; see also Nishida, 1999, xi–xii).

Fundamental Commentaries Translated from Chinese

Tanguts translated fundamental exegetical compositions from both Chinese and Tibetan; however these translations are not numerous. One major text pertaining to the realm of Chinese Prajñāpāramitā commentarial literature in Tangut translation is the *Da Zhidu lun* (大智度論; *tha*^{1} *sjij*^{1} *gju*^{1} *mər*^{2} *mja*^{1} [[illegible]]; **Da Zhidu benmu* [大智度本母]; here and in the examples below, the Tangut translators used *mər*^{2} *mja*^{1} ["[illegible]"; *benmu* (本母)] instead of *ljị*^{1} [[illegible]], which translates Chinese *lun* [論]; T. 1509; Kych 290). This text was popular in Xixia: its fragments have been retrieved from a variety of locations throughout the former Xixia territory (Peng Xianqian, 2007, 110–114).

The majority of exegetical treatises translated from Chinese pertain to the Vijnanavada and Abhidharma subject matter. Currently identified texts include the translation of the *Yogācārabhūmi* (original title *Yujia shi di lun* [瑜伽師地論]; T. 1579; *·juu*^{1} *khja*^{2} *dzjiij*^{2} *ljɨ* *mər*^{2} *mja*^{1} [[illegible]]; Kych 293), the *Abhidharmasamuccaya* (*tha*^{2} *·u*^{2} *a phji*^{1} *tha*^{1} *mo*^{2} *śioo*^{1} *mər*^{2} *mja*^{1} [[illegible]]; *Dasheng Apidamo jilun* [大乘阿毘達磨集論]; T. 1605; Kych 295), and *A phji*^{1} *tha*^{1} *mo*^{2} *tśhja*^{2} *·wo*^{2} *rjir*^{2} *bju*^{1} *mər*^{2} *mja*^{1} ([illegible]; i.e. Xuanzang's translation of *Abhidharmanyāyānusāra*, *Abidamo shun zhengli lun* [阿毘達磨順正理論]; T. 1572; Kych 291) by Saṅghabhadra (Zhongxian [眾賢]). One more text in this category is *The Clarification of the Sacred Teaching* (*Śjij*^{2} *tsjiir*^{1} *dźju*^{1} *wejr*^{1} *mər*^{2} *mja*^{1} [[illegible]]; i.e. the translation of Asaṅga's *Xianyang shengjiao lun* [顯揚聖教論]; T. 1602; Kych 294). The above list is indicative of a general inclination toward texts translated by Xuanzang (*Na*^{1} *tha*^{1} [[illegible]]; "The Great Profound").

The aforementioned texts remain undated. The date on the manuscript of the *Yogācārabhūmi* indicates that it was copied during 1215–1224, but no indications on the date of the original translation are available. Importantly, many of these texts survive as manuscripts written in highly cursive script; sometimes the texts contain interlinear notes and comments, probably by the reader. The overall impression is that the texts in this category were not intended for wide distribution. The circulation of these texts was probably limited to the monastic community in Khara-Khoto.

Fundamental Commentaries Translated from Tibetan

Scriptures devoted to Prajñāpāramitā and Mādhyamaka (*Dbu ma*) form an important group within the Tangut textual heritage; however the provenance of only several texts has been properly established so far. Some external evidence allows suggesting Tangut familiarity with the six basic treatises of Nāgārjuna; but no identified versions of these texts are available so far. Currently it appears that the Tangut understanding of the "Middle Way" was determined by the Tibetan Bka' gdams curriculum (see below; Solonin, forthcoming).

Apart from that, one important work of Prajñāpāramitā subject matter widespread in Xixia was the translation of Haribhadra's commentary (*vṛtti*) on Maitreyanātha's *Abhisamayālaṃkāra* (*Śjɨj*^{2} *buu*^{2} *zjɨr*^{1} *tjɨj*^{1} *rewr*^{2} *njɨ*^{2} *tshji*^{1} *ŋwuu*^{1} *dzjiij*^{2} *ɣiew*^{1} *mjor*^{1} *·ju*^{2} *wo*^{2} *ljuu*^{2} *tshjij*^{2} *ljị*^{1} *dźju*^{1} *ljaa*^{1} [[illegible]]; *Shes rab kyi pha rol tu phyin pa'i man ngag gi bstan bcos mngon par rtogs pa'i rgyan ces bya ba'i 'grel pa*; D 3786/P 5191; Kych 393–399). The Tangut translation is based on the revised Tibetan version by Rngog lotsā ba Blo ldan shes rab and Go mi 'chi med, which was compared with the Sanskrit text and translated for Renxiao under the supervision of the state preceptor and finally personally revised by the emperor. The text circulated as both manuscript and woodblock print.

Other popular texts such as the aforementioned *Prajñāpāramitāratnaguṇasañcayagāthā* (12 copies) as well a few other compositions (e.g. Kych 654–658) were produced by Jayānanda's circle around 1149; their popularity was secured by the high esteem of the translator. A Tangut version of the *Bodhicaryāvatāra* (*Po*^{2} *tjɨj*^{2} *kjir*^{1} *sjij*^{1} *jij*^{1} *dźjɨ* *kha*^{1} *·o*^{2} *śjij*^{1} [[illegible]]; Kych 400–402; Kych 402 seems to be an "official translation" of the text; D 3871/P 5272) together with a currently unidentified commentary called *Notes to the Bodhicaryāvatāra* (*Po*^{2} *tjɨj*^{2} *kjir*^{1} *sjij*^{1} *jij*^{1} *dźjɨ* *kha*^{1} *·o*^{2} *śjij*^{1}*la*^{1} [[illegible]]; Kych 403–404) and the *Śikṣāsamuccaya* (*ɣiew*^{1} *lew*^{2} *zji*^{2} *sjoo*^{1} *jij*^{1} *ljaa*^{1} *ljị*^{1} [[illegible]]; Kych 439) by Śāntideva (*fl.* 7–8 cents.; *Śja*^{1} *tja*^{1} *thew*^{1} *wa*^{1} [[illegible]]) are indicative of the Tangut attempts to create an integrated systematic Buddhist worldview. The *Bodhicaryāvatāra* appears to have been a widely studied text in the Tangut Empire: it circulated in both printed and manuscript formats and at least in two translations; whereas the *Śikṣāsamuccaya* is currently extant only as a fragmented manuscript (Nishida, 2012a, 393–396).

Currently no translations from Tibetan Vinaya or Abhidharma have been identified. This is likely because the prestige of Xuanzang's and Yijing's translations was well established by the time of the considerable inflow of Tibetan texts into Xixia. Some Vijñānavāda texts might still turn out to have been translated from Tibetan or composed in Xixia on the basis of Tibetan expositions of the doctrine, though at present the provenance of these texts has not yet been properly established.

Judging from the above, in translating both fundamental scriptures from Chinese or from Tibetan, the Tangut Buddhists chose not the fundamental texts such as *Mūlamadhyamikakārikā* or the root *tantras* but instead the detailed commentaries and exegetical (supporting) treatises. At the same time, some of the originals of important Mahāyāna *śāstras* were available in Chinese or Tibetan versions. The nature of the Tangut appropriation of Buddhism should be the subject of future studies.

Texts of Buddhist Schools in the Tangut Translations

In general, both Sinitic and Tibetan parts of the Tangut Buddhist corpus are dominated by the genres related to the realm of Buddhist practice rather than doctrine: out of 768 entries catalogued by E.I. Kychanov, about 170 titles belong to various doctrinal compositions (*sūtras*, *śāstras*, fundamental commentaries, etc.), whereas the rest of the collection consists of different types of *dhāraṇi* texts and ritual and meditation guides. As surviving colophons indicate, the majority of the texts that explicate the teachings of the so-called schools (*zong* [宗]) of Sinitic Buddhism as well as Tangut local compositions of this type came into wide circulation probably starting from around 1168–1189. A similar time frame applies to the datable texts translated from Tibetan.

Texts of Sinitic Buddhist Schools (*zong*)

The earliest attempt to introduce a systematic understanding of Buddhism based on the Sinitic model is again dated to Bingchang's period: the encyclopedia *Jinglü yixiang* (經律異相; *lwər*^{2} *dzjij*^{1} *do*^{2} *jij*^{1} [[illegible]]; T. 2121; *Xixia Studies*, 2007, 390–391; originally commissioned by Liang Wudi (梁武帝; 464–549 CE), was translated into Tangut and published under the patronage of Bingchang and his royal mother.

ddhist Schools (*zong*)

o introduce a systematic under- m based on the Sinitic model is hang's period: the encyclopedia 異相; *twər^2 dzjij^1 do^2 jij^1* [illegible] *udies*, 2007, 390–391; originally ang Wudi (梁武帝; 464–549 CE), angut and published under the ang and his royal mother.

The subject matter of the Sinitic textual corpus in Xixia that can be related to the "schools" of Chinese Buddhism is quite uniform and gravitates toward the teaching provisionally identified as Huayan Chan (華嚴禪) or, in a broader sense, a specific version of Huayan teaching developed by Qingliang Chengguan (清涼澄觀; 737–838 CE; *gji^1 bioo^1* [illegible]) and Guifeng Zongmi (圭峰宗密; 740–841 CE; *kjwi^1 ɣjow^2* [illegible]) during the late 8th-mid-9th centuries. This version of Huayan enjoyed a certain popularity in the Northern Song and was widespread in the Liao (Solonin, 2013, 171–219).

The Huayan tradition is represented by fragments of the Tangut translation of Chengguan's *Notes to the Expanded Commentary to the Buddhāvataṃsakasūtra* (*Tha^2 tśhja^2 wa^2 tha^2 wja^2 ljuu^1 twər^2 rejr^1 gjɨɨj^1 bju^1 wo^2 śja^2 bjij^1* [illegible]; a translation of a version of T. 1736; *Da Fangguang Fo Huayan jing suishu yan yi ji* [大方廣佛華嚴經隨疏演義記]; Kych 491). The possibility of identifying other compositions based on the Chengguan's Commentary still survives.

The repertoire of Zongmi's texts in Tangut translations is much broader and includes his famous *Zhu shuo Chan yuan zhuquan jidu xu* (諸說禪源諸詮集都序; T. 2015; Kych 321–323, 646, 625, 626, 749; Nie Hongyin, 2001, 3–22; 2011, 35–57) in a number of copies, accompanied by a variety of commentaries not available in Chinese (they were probably native Tangut compilations). Another important text by Zongmi is the *·Iọ^1 dwewr^2 gjɨɨj^2 jij^1 zjɨɨr^1 ljɨ^1 lew^1 tsew^2 phju^1 khwə^1* ([illegible]; *Yuanjue jing shu zhi luebu diyi shangban* [圓覺經疏之略補第一上半]; i.e. *Yuanjue jing lueshu chao* [圓覺經略疏鈔]; T. 248), which was discovered in Shanzui gou (see *Shanzui gou*, vol. I, 2007, 56–62; Solonin, 2014, 157–184). Importantly, most of these texts survived as woodblock prints, which attests to their wide circulation.

The text in the greatest quantity in the Sinitic portion of the Tangut Buddhist corpus is *Twenty-Five Questions and Answers on Buddhist Principles by the State Preceptor Zhong while He Was Staying in the Guangzhai Monastery* (*Thow^1 tśhjow^1 lhjij^2 dzjiij^2 Bji^1 pju^2 ʻjim^1 mjii^1 u^2 dzjiij^1 tśhjɨ^1 dzjɨj^1 ʻji^1 dzjwo^2 tha^2 wo^2 dja^1 ·jɨr^1 njɨɨ ^{1} ɣạ^2 ŋwe^1 ·jɨr^1 hụ^2* [illegible]; *Tang *Zhong Guoshi zhu Guangzhai si zhongren wen foli ershiwu wenda* [唐忠國師住光宅寺爾時眾人問佛理二十五問答]; Kych 719–734; another two copies were located recently), the Tangut translation of an otherwise unknown "recorded saying" (*yulu* [語錄]) of a once prominent Tang-dynasty Chan master, Nanyang Huizhong (南陽惠忠; ?–775 CE; Solonin, 2012b, 267–347). The general tenor of this text connects it with the Huayan Chan system. The text exists in about 20 copies from Khara-Khoto alone, which makes it probably one of the most popular Buddhist texts in Xixia. The text with the second most numerous copies is the Tangut translation of the *Jingtu Shi yi lun* (淨土十疑論; T. 1961; Sun & Han, 2012, 98–107; Kych 436–438) by Tiantai Zhiyi (天台智顗; 538–597 CE).

Other components of the Huayan repertoire include the *Golden Lion of Huayan* (*Wjạ^1 tshjij^2 kiẹ^1 ka^2 tśjij^2 dzwə^1* [illegible]; Kych 304; *Huayan Jin shizi zhang* [華嚴金獅子章]; T. 1880; Sun Bojun, 2010b, 67–74) and *Contemplation on Returning to the Source* (*ɣjow^1 lhjwo^2 bioo^1* [illegible]; *Xiu Huayan aozhi wangjin huanyuan guan* [修華嚴奧旨妄盡還源觀]; T. 1876;) by Xianshou Fazang (賢首法藏; 636–712 CE) edited by Jinshui Jingyuan (晉水淨源; 1011–1088; Sun Bojun, 2010c, 57–69). Another important example is the unique text *Bjij^2 Wjạ^1 tshjij^2 tsjiir^1 kiẹj^2 bioo^1 ɣa^1 na^1 thwuu^1 la^1* ([illegible]; *Zhu Huayan fajie guan men tongxuan ji* [注華嚴法界觀門通玄記]; Kych 306; Chinese version available in fragments) by a little-known Huayan master from the Northern Song, Guangzhi Bensong (廣智本嵩; *fl.* mid-11th cent.), who was important in the Tangut State (Nie Hongyin, 2011a, 118–123). Generally, these Huayan works are representative of the Huayan repertoire as it emerged during the Northern Song. Again, foundational compositions of the Tang-period Huayan have not yet been located within the Tangut corpus.

Some Huayan or Huayan Chan texts were imported from the Liao and translated into Tangut. Here one should mention the *Meaning of the Perfect Luminous Mind According to the Ultimate One Vehicle* (*Dzjɨ^1 dźjwa^1 lew^1 io^1 swew^1 njiij^1 wo^2* [illegible]; **Jiujing yicheng yuanming xinyi* [究竟一乘圓明心義]) and other texts by the Liao Buddhist master Tongli Hengce (通理恒策; 1049–1099; *wo^2 dar^1* [illegible]; Solonin, 2014; Kych 501; Chinese version available in fragments from Khara-Khoto). Another example is the *Tjɨj^1*[illegible] (*jing* [鏡]; Kych 752), a translation of the *Jing xin lu* (鏡心錄), a work of the famous Liao master Yuantong Daoshen (圓通道殿; 1056?–1114[?]; Solonin, 2012a, 137–188) existing only in Tangut.

The Chan heritage is represented by fragments of the *Platform Sūtra of the Sixth Patriarch* (Solonin, 2008, 163–185), *Treatise on the Contemplation of Mind*

(*Tha^1 mo^2 tha^2 dzjiij^2 bioo^2 njiij^1 mər^2 mja^1* [[illegible]], and **Damo dashi guanxin lun* [達摩大師關心論]; i.e. *Damo poxiang lun* [達摩破相論]; T. 1220; a work by Shenxiu [神秀; 606–706 CE]; Sun Bojun, 2012, 266–303). The Tanguts were aware of the genre of the Chan-Buddhist hagiography, as is testified by the discovery of *The Most Important of the Lamp: Part Three* (*Tjij^1 tshji^1 sọ^1* [[illegible]]; **Deng yao san* [燈要三]; Kych 756), a fragment of the Tangut translation of an abridged version of the *Jingde Chuandeng lu* (景德傳燈錄; T. 2076).

Such texts as *Mirror of the Perfect Mind* (*Io^1 njiij^1 tjɨj^1* [[illegible]]; **Yuanxin jing* [圓心鏡]), *Illuminating Mind of the True Way* (*ɤiej^1 tśja^1 njiij^1 swew^1* [[illegible]]; **Zhen dao xin zhao* [真道心照]), and *Teachings and Ritual of the Hongzhou School* (*Xu^1 tśjiw^2 mər^2 dzjiij^2 dzju^1 tjɨj^1* [[illegible]]; **Hongzhou zongshi jiaoyi* [洪州宗師教儀]), together with its commentary devoted to the exposition of the Chan teaching of Mazu Daoyi (馬祖道一; 709–788 CE), are all written in the Huayan Chan paradigm (Solonin, 2014, 203–245). No Chinese originals of these texts have been discovered so far; these texts are provisionally identified as local Xixia compositions.

Apart from the aforementioned texts, the Tangut Abhidharma curriculum includes several expositions of the *Hundred Dharmas of Mahāyāna* (*tha^1 u^1 ·jir^2 tsjiir^1* [[illegible]]; *Dasheng baifa* [大乘百法]; Kych 296, 502, 300), which are of questionable identity. One text, *A Brief Exposition of the Treatise on the Hundred Dharmas of Mahāyāna* (*tha^1 u^1 ·jir^2 tsjiir^1 swew^1 ɣa^1 mər^2 mja^1 ljow^2 śja^2* [[illegible]]; *Dasheng baifa mingmen lun lueshi* [大乘百法明門論略釋]; Kych 300) is currently identified as the translation of the *Dasheng baifa mingmen lun* (大乘百法明門論; T. 1836) by Puguang (普光). Another text, *The Bright Mirror: Collection of the Hundred Dharmas of Mahāyāna* (*tha^1 u^1 ·jir^2 tsjiir^1 swew^1 tjɨj^2 śioo^1* [[illegible]]; *Dasheng bai fa mingjing ji* [大乘百法明鏡集]; Kych 296), was originally identified as T. 1614, that is *Baifa Mingmen lun* (百法明門論). As it appears now, the Vijñānavāda curriculum is represented by just one text, *The Notes to the 20 Verses on the Mind-Only* (*Njɨɨ^1 ɤa^2 lew^1 sjij^1 la^1* [[illegible]]), which was originally identified as the translation of the *Weishi ershi lun shuji* (唯識二十論述記) by Kuiji (窺基; T. 1834; Kych 298–299). The present survey provisionally includes them into the category of doctrinal writings translated from Chinese; however, they should be subjected to a more serious scrutiny before their affiliation can be properly established.

Texts of Tibetan Buddhist Schools

Among the Tibetan compositions devoted to the exposition of the doctrine translated into Tangut, the most noticeable are the texts revolving around the translation of the *Satyadvayāvatāra* (*Njɨɨ^1 dźji^2 'o^2 śjij^1* [[illegible]]; Kych 405–408; *Bden pa gnyis la 'jug pa*; D 3902/ P 5298) by Dīpaṃkaraśrījñāna (982–1054). Currently, two versions of the Tangut translation have been identified. About six commentaries to this text have been so far discovered in the Tangut collection in Khara-Khoto, and several fragments of a similar subject matter were discovered in Shanzuigou. Among these *The Exposition of the Two Truths According to Rngog lo tsā ba* (*Ŋwə^1 lu^1 tśja^1 wa^2 tshjij^1 tjɨj^2 njɨɨ^1 dźjị^2 wo^2 la^1* [[illegible]]; Kych 633) is identified as a composition by Rngog lotsāba Blo Ldan shes rab (1059–1105) or by a member of his circle. Another important text in this category is *The Explanation of the Meaning of the Treatise on the Entry into the Two Truths* (*Njɨɨ^1 dźji^2 ɤa^2 'o^2 śjij^1 mər^2 mja^1 jij^1 wo^2 phie^1 la^1* [[illegible]]; Kych 619) by *Po^{2}tjɨj^2 ka^1 tśjij^2* ([illegible]; *菩提獅子; *Byang chub seng ge; Solonin, forthcoming). The existence of so many texts belonging to this group indicates the intensive relationship that once existed between the Tangut Empire and early Bka' gdams masters (Iuchi, 2012, 58–62). However, no Tangut translation of another fundamental text by Dīpaṃkaraśrījñāna, the *Bodhipathapradīpa*, has yet been identified.

In the Khara-Khoto collection, one can discern a noticeable presence of Tangut translations of texts on "valid cognition" based on Tibetan originals. External evidence indicates that the Tanguts had an awareness of the "seven treatises" of Dharmakīrti. However, only the *Tśhja^2 wo^1 gjɨwr^2 rjar^1 gjij ^{1}ɣjɨr^1* ([illegible]), a translation of the *Nyāyabinduprakarāṇa* (*Rigs pa'i thigs pa shes bya ba'i rab tu byed pa*; D 4212/P 5711; Kych 423–424) has been identified. Among the texts within this cluster, one can also note the *Tśhja^2 wo^1 gjɨwr^2 jij^1 gjwi^1 wo^1 dzju^1 śja^2* ([illegible]; Elucidation of the Meanings of the Phrases of *Nyāyabindu*) composed by *Źjɨr^1 ɣwie^1* ([illegible]; *Jinamitra*); this text is probably a translation of the *Rigs pa'i thigs pa'i don bsdus pa* (D 4233/P 5732; *Nyāyabindupiṇḍārtha*; Kych 426–429), however, more detailed study is needed. Other texts that mention "valid cognition" in their titles need to be researched before their identity can be confirmed.

Apart from the above, several Tangut texts seem to form a specific cluster revolving around impor-

Ritual and Meditation Texts

The textual repertoire of Tangut Buddhism is dominated by texts pertaining to various aspects of Buddhist practice. Thus such specific categories as *tshji^1 ŋwuu^1* ([illegible]; *man ngag* [*upadeśa*] or *gdams ngag* [*āmnāya*]), *tsjiir^1 da^2* ([illegible]; *fashi* [法事]; *cho ga* [*vidhi*]), *kju^1 śjij^1* ([illegible]) or *wji^1 śjij^1* ([illegible]; *sādhanā*; *sgrub thabs*; or *krama*, *rim pa*) are especially numerous in the Tangut collections. Other genres include *śjā^1 djij^2* ([illegible]; *chanding* [禪定]) or *lə düjɨj^2* ([illegible]; *nianding* [念定]; contemplation manual). The most numerous are the texts in the *man ngag* genre (Kychanov lists about 60 independent titles devoted to a variety of subjects).

The Sinitic segment of the liturgical scriptures in Tangut is dominated by the *Njij^2 wjuu^1 rejr^2 lhjoor^1 dźjar^2 rewr^2 tsjiir^1* ([illegible]; i.e. the *Repentance Ritual of Liang Wudi* [*Cibei daochang chanfa*; 慈悲道場懺法]; T. 1909; Kych 307–316), which also dates to Bingchang's reign. The translation and publication of this work were part of a system of measures to propagate Buddhism by the Empress Dowager Liang, just as was the publication of the *Jinglü Yixiang* mentioned above. This text is one of the most numerous in the Khara-Khoto collection and elsewhere; its copies are widely represented in other Tangut collections (Yang Zhigao, 2011, 99–103; Kych 307–316); the text was republished within the Tangut Buddhist canon during the Yuan (Wang Han, 2005, 111–118).

Another popular ritual text whose position in the Tangut Buddhism can be clearly established is *The Ordinary Rituals for* [*Attainment*] *of Bodhicitta* (*Po^2 tjij^2 njij^1 ljɨ^1 ʻju^2 wji^2 lew^2 tsiir^1 da^1* [[illegible]]; *Byang chub kyi sems bskyed pa dang yi dam blang pa'i cho ga*; *Bodhicittotpādasamādānavidhi*; D 4493/P 5406; Kych 411–420) by Jitāri (originally translated by Sumatikīrti and Blo ldan shes rab). This work is available in several copies in both manuscript and woodblock print format. This ritual manual was included among the *chos chung* (small teachings) of Dīpaṃkaraśrījñāna, thus one can suggest a connection between the Bka' gdams teaching in the Tangut Empire and the popularity of Jetāri's composition.

Tangut ritual and meditational texts (not necessarily tantric) of Tibetan origin are distributed among several yogic systems, namely those of the *lam 'bras*, Vajravarahī, Cakrasaṃvara, Mahāmudrā, Avalokiteśvara, and Hevajra. The rituals of the 35 buddhas, food-offering ceremonies, and so forth, which were popular in the Tangut Empire, later resurfaced in the Yuan-and Ming-period ritual compositions.

As far as esoteric texts are concerned, the *Hevajratantra* cycle in Tangut is represented by a commentarial fragment on the root *tantra* *Lhju^1 ɣjɨ^1 njij^2 mər^1 twẹ^2 jij^1 la^1* ([illegible]; Notes on the *Hevajratantra;* Kych 354, 355) and a ritual manual whose title is tentatively translated as The Ritual of Consecration on the Hevajra *Maṇḍala* of the Nine Buddhas (*Lhju^1 ɣjɨ^1 njij^2 gjɨɨ^1 tha^1 gu^2 tśjị^{1}bju^1 dzju^2 lhjij tśjɨ^1* [[illegible]]; Kych 327). Both the ritual manual and the commentary are provisionally identified as belonging to the tradition of Rngog Chos rdor (1036–1102; Solonin, forthcoming; based on D. Martin's suggestion). One more Hevajra *sādhanā* was identified within the collection known as The Light of Amṛita: Two Texts by the "*Vajra* Born from the Sea" (*Tsə̣^{1} bji^1 ŋjow^2 tshjij^2 ɣjɨ^1 njij^2·jwɨr^2 gu^2 njij^2* [[illegible]]). This collection, attributed to Saroruhavajra ([illegible]; *海生金剛; *Mtsho skyes rdo rje*), contains a text that Nishida identifies as *Dgyes pa'i rdo rje'i sgrub thabs* (D 4115/ P 1218; Kych 711; the Tangut text attributes the collection to Ḍombi Heruka; Nishida, 2012a, 395).

Lam 'bras texts are represented by several compositions, out of which one is found in a large number of copies. The text *Precious Torch Elucidating the Bodhisattva Study of Fruit and Path as One-Practice* (*Po^2 tjɨj^2 kjɨr.^{1} sjij^2 ɣiew^1 lew^2 tśja^2 ljɨ^1 mja^2 rjir^1 ja^2 śjij^1 dzju^1 śja^2 ljɨ^1 zjur^2* [[illegible]]) is available in 27 copies (Kych 458–486). Together with the "recorded sayings" of Huizhong, it is one of the two most popular texts in Xixia. The author of this work is *Ljɨ^1 ka^1 tśjij^2* ([illegible]; *Bao shizi [寶獅子]; **Dkon mchog seng ge*; ?–1219), that is, the Tangut imperial preceptor and first Karma pa Dus gsum mkhyen pa's (1110–1193) disciple sent to the Tangut state (Sperling, 1987, 32–50). In general, the titles of *lam 'bras* texts from the Khara-Khoto collection resemble those preserved within the *Dasheng yaodao miji.* However, textual comparison demonstrates substantial deviations between the Tangut and Chinese versions (Sun Bojun, 2014, 111–123).

In many cases the *upadeśas* (*man ngag*) and *vidhis* (*cho ga*) of the Vajravarahī and Six Yogas systems are anonymous. However, the most prolific author and "transmitter" of these teachings was *Tsjiir^1 ka^1 tśjij^2* ([illegible]; *Chos kyi seng ge; otherwise known as Yar lungs pa [*ja^1 ljow^2 sjɨ^2 pja^1*([illegible])]; Dunnell, 2009, 41–78; Sperling, 2005, 1–26; this character emerges in the texts under a variety of names and titles). The texts that he transmitted in Xixia, among others, include the *Ritual for Contemplation of Vajravarahī* (*ɣjị^1 njij^2 mjɨ^2 lheew^2 mja^1 jij^1 lə djɨj^2 wji^1 śjij^1* [[illegible]]; Kych 542), the *Attainment of the Four Consecrations through Dhāraṇī* (*ka ·jiij^1 ŋwu^2 ljɨr^1 dzju^2 lhjij śjij^1* [[illegible]]; Kych 547), and several compositions on the Six Yogas. So far, no Tibetan originals for the works transmitted by Yar lungs pa in the Tangut state have been discovered, and therefore his teaching might have circulated only in Xixia and the Tsong kha area. Thus, these works are provisionally included in the category of Tangut native Buddhist literature.

Other basic Six Yogas texts, attributed by their colophons to Nāropa, include the *Upadeśa on the Essence of the Six Dharmas* (*Tśhjɨw^1 tsjiir^1 ·jij^1 kwər^1 tshji^1 ŋwuu^1* [[illegible]]; Kych 605–607) and a composition with a title that provisionally may be translated as *Upadeśa for the Unity of Desire and Joy* (*Kięj^2 rejr^2 ·iọ^1 lwu^1 phji^1 sjij^1 tshji^1 ŋwuu^1* [[illegible]]; Kych 593, 594; Solonin, forthcoming).

A cluster of Mahāmudrā texts available from the Tangut collections is almost completely duplicated in the *Dasheng yaodao miji* (Suo Luoning, 2013, 237–243); these texts are generally identified as the compositions associated with the Bka' brgyud tradition. The most popular Mahāmudrā text in Xixia was the *Tha^1 dźiej^2 njɨ^2 dźjwa^1 tshji^1 sjoo^1* ([illegible]; *Ultimate Upadeśa on the Great Seal*; Kych 661–665) found together with several commentaries also available in Tangut. This text is a Tangut native compilation by a Tangut Buddhist leader Dehui (*Tśhja^2 źjir^1* [[illegible]]; Dehui[德慧]; Solonin, 2013, 263–264; Nishida, 1999, xlii-xliv); one of the commentaries to the text recorded the actual procedure of an oral transmission that Dehui received from a Tibetan master. This text was one of the few *upadeśas* to have circulated in printed form, probably also due to the high standing of its author, who occupied a number of prestigious posts in the Tangut Buddhist administration.

The currently available *grub mtha'* repertoire (e.g. *sọ^1 ljụ^2 gjɨɨ^1·ụ^2 dźju^1 śja^2* [[illegible]]; **Sku gsum theg pa dgu'i 'grel pa*; Kych 493) reveals that the Rnying ma doctrinal taxonomy of nine vehicles was well-known in the Tangut state. As is the case with other Rnying ma compositions, these texts include expositions of four types of yoga (i.e. [1] *a tji^2 ·jo^2 ŋwər^1* [[illegible]; *atiyoga*], [2] *a njuu^2 ·jo^2 ŋwər^1* [[illegible]; *anuyoga*; *rnal 'byor rgyud*], [3] *mja^1 xa^1 ·jo^2 ŋwər^1* [[illegible]; *mahāyoga*); etc.) as well as of other vehicles (Solonin, forthcoming). Another text, known as the Introduction into the Five Parts of Dharmadhātu: Final Part (*Tsjiir^1 kięj^2 ŋwe^1 djij^1 gu^2 bu^1* [[illegible]]; Kych 709), is a translation of a previously unknown account of Berotsana's (*Pji rjo tshaw nja* [[illegible]]; i.e. Vairocana, one of the "seven chosen" [*sad mi mi bdun*] from the period of first propagation of the dharma in Tibet) travel to India in search of the supreme dharma of liberation during the time of Khri srong de'u btsan (790–844 CE). This text resembles the famous biography of Vairocana known as *'Dra 'bag chen mo* (Solonin, forthcoming).

One more specific category of Buddhist literature to be mentioned here is the translations from Tibetan into Chinese made in the Tangut state. Here one can mention the recently discovered *Xi jingang kongxing mu wangjin lüe ji da mi benxu* (喜金剛空行母網禁略集大密本續; Shen Weirong, 2013b, 142–175), which is a Xixia translation of the *Hevajratantra*; another text is *Zui sheng shangle ji benxu xianshi ji* (最勝上樂集本續顯釋記), dated to the Huangjian (皇建) years of Xixia (1210–1211), a translation of a hitherto unknown commentary on the *Cakrasaṃvaratantra* (Wei Wen, 2013, 301–331). So far, no Tangut versions of these compositions have been identified.

The Tangut Buddhist Canon

Unlike the Kitan or Jurchen, the Tangut Empire never undertook the publication a Buddhist canon in Chinese (Li Jining, 2003, 470–481; however comp. Shi Jinbo, 1988, 98–100). However, the Tangut Buddhists were well aware of what a Buddhist canon is; relevant vocabulary and system of numeration for the multivolume compositions also existed in the Tangut language. The Tangut text of the *Imperial Preface to the Newly Translated Tangut Tripiṭaka* (*Phiow^1 bjij^2 lhjij tha^2 sjɨw^1 lhej^1 sọ^1 u^2 śjɨj^2 dzjiij^1 bu^1* [[illegible]]; i.e. *Da Baigao guo xinyi Sanzang shengjiao xu* [大白高國新譯三藏聖教序]; Nishida, vol. II, 1975–1977, 6–7; Shi, 1988, 283–285) seems to demonstrate the existence of a Tangut Buddhist canon as early as the Tangut imperial

---

period. However, no data on the time and place of the publication of canon is available from this text.

The imperial seal on the translation of the *Dīrghāgama* mentions that the text was originally prepared under the supervision of the fourth emperor Qianshun, edited by Renxiao, and added to the Tangut Tripiṭaka housed in the monastery *ŋwər*^{1} *lhji*^{2} *ljwu*^{2} *tshja*^{2} ([illegible]; "Retribution for Joy of All Under Heaven"; 天下慶報) by Renxiao's wife, Empress Luo. The name of the monastery indicates that it was built in the Tianqing (天慶) reign period (1194–1206). These dates indicate the time frame for the existence of this Buddhist canon. The text on the seal may be interpreted as indicating that there existed a catalogue or registry of the Tangut Buddhist canon, in which the text was recorded. Currently there is no other information on this original Buddhist canon. However, its structure is probably revealed in the aforementioned paragraph of the *Tiansheng Law Code*.

The growing importance of Tangut monks in the Yuan period allowed Buddhist leaders of Tangut origin, such as Yixing Huijue (一行慧覺; ?–1314[?]) and Guanzhuba (管主八; *fl.* mid-14th cent.), monk-registrar (*senglu* [僧錄]) in Hangzhou (杭州), to collect Tangut texts and republish them as a Tripiṭaka. Yixing Huijue collected available texts, and in 1270 the collection was published (Shi Jinbo, 1988, 317–318). This initial publication was later enhanced by Guanzhuba, who published a Tangut-language version of the Buddhist canon in the Wanshou si (萬壽寺) in Hangzhou from 1293 to 1306 (Duan, 2006, 125–127; Wang Jingru, 1932, 1–15; Shi Jinbo, 2005, 298–312, 312–331, 347–370; Wang Han, 2005). This publication was probably undertaken within a larger project of systematizing of the Buddhist canon, which was carried out during the Yuan. Guanzhuba's publication amounted to 50 copies, which were distributed in the former Tangut lands. The information about this publication is found in a variety of sources in both Chinese and Tangut, therefore there is no reason to doubt its veracity. Although fragments of the Tangut publications bearing Guanzhuba's office seal have survived (e.g. a copy of the *Buddhāvataṃsakasūtra* held in Princeton University), which corroborates the source data on Guanzhuba's publication activities, the surviving Tangut Buddhist textual corpus lacks editorial uniformity, which impedes judgment on the actual structure and repertoire on the Tangut Buddhist canon.

Local Literatures: Khotanese

Khotanese Buddhist literature is the body of writings of Buddhist content written in Khotanese, the Eastern Middle Iranian language of the Buddhist Saka Kingdom of Khotan on the southern branch of the eastern Silk Route (in present-day Xinjiang), and preserved in a large number of manuscripts in Brahmi script from the 5th to the 10th century. These were recovered chiefly by expeditions from the West and Japan in the 20th century. New material has come to light in recent years. Fundamental editions of Khotanese texts are by H.W. Bailey (vols. I–V, 1945–1985; ^{2}1981), R.E. Emmerick and I.M. Vorob'ëva-Desjatovskaja (1995), and P.O. Skjærvø (2002). On Khotanese literature, see O. Hansen (1968, 77–83), M.J. Dresden (1977), R.E. Emmerick (^{2}1992), H.W. Bailey (1982, 63–80; 1983), A. Iwamatsu (1985), H. Kumamoto (1985; ^{2}2012), R.E. Emmerick and P.O. Skjærvø (1990), M. Maggi (2008; 2009), and P.O. Skjærvø (^{2}2012). (In this article, Buddhist terms are as a rule in Sanskrit; Khotanese equivalents are added on occasion especially if they are not Indian loanwords. Conventional English titles are used for texts whose original titles are unknown.)

The greater part of the extant Khotanese literary texts are Buddhist works. Khotan played an important role in the transmission of Buddhism from India to China and Tibet and was the stronghold of Mahāyāna in Central Asia from the 3rd–4th centuries to its conquest by the Qarakhanids shortly before 1006. The Chinese monk Zhu Shixing (朱士行), the first known case of a Chinese journeying west in search of Buddhist scriptures, found the Sanskrit text of the *Pañcaviṃśatisāhasrikā Prajñāpāramitā* in Khotan probably in 260 CE, and the Khotanese monk Mokṣala translated it into Chinese in 291 CE (T. 221). Another copy of the Sanskrit text was brought to the Chinese capital of Chang'an (present-day Xi'an) by the Khotanese monk Gītamitra in 296 CE. Another Khotanese monk, also called Gītamitra, brought the *Daśabhūmikasūtra* to China and translated it in 376 CE. The second part of the Mahāyāna *Mahāparinirvāṇasūtra* (T. 374; trans. Dharmakṣema between 414 and 421 CE) was obtained in Khotan. Part of the Sanskrit original of the smaller *Buddhāvataṃsakasūtra* (T. 278; trans. in 418–420 CE) was found there by Zhi Faling (支法領), another Chinese monk in search of Buddhist scriptures outside China, around the beginning of the 5th century CE. The Chinese pilgrims Faxian (法顯) and Xuanzang (玄奘), who were in Khotan in 401 and 644 CE respectively, state that Mahāyāna flourished there. The other Khotanese translators of Buddhist works into Chinese (Gītamitra, Devendraprājña, Śikṣānanda, Zhiyan [智嚴], a Khotanese prince who was sent to China as a hostage and became a monk in 707 CE, and Śīladharma) mostly translated Mahāyāna scriptures. A Mahāyāna text was translated into Chinese in Khotan by the Indian monk Bhagavaddharma (Bagchi, 1927, 214–215; Zürcher, ^{3}2007, 61–63; Kumamoto, ^{2}2012, 145). Most importantly, extensive remains of Mahāyāna Sanskrit texts have been recovered from Khotan (e.g. the so-called Kashgar manuscript of the *Saddharmapuṇḍarīkasūtra* with a two-folio introduction in Khotanese and chapter colophons in Sanskrit and Khotanese; see Emmerick, 1974; Chandra, ^{2}1977; Maggi, 2009, 342–343). These need to be taken into account if a complete picture of Buddhist literature in Khotan is to be obtained (see also e.g. Karashima & Wille, 2006–2009). However, Buddhist texts in Khotanese are an essential part of the same picture and important sources on the development of Mahāyāna. In the case of translations, they often reflect an older state of the text than the earliest extant Sanskrit manuscripts, so that all interested in the history of especially Mahāyāna Buddhist texts ignore Khotanese literature at their peril.

The older manuscripts in Khotanese were produced in Khotan, while the younger ones came from Dunhuang. Apart from a *Bhaiṣajyagurusūtra* fragment whose colophon points to the late 8th century CE (Skjærvø, 1991, 270), none of the literary manuscripts from Khotan is dated, and only an approximate dating on paleographic grounds is possible between the 5th and the 9th century. The manuscripts from Dunhuang, partly dated, are largely from the 10th century, but some may go back to the late 9th century. The texts are written in a variety of linguistic stages that are usually grouped under the labels of Old and Late Khotanese. Rare Late Khotanese forms in early manuscripts point to a situation of diglossia in Khotan from

the 5th–6th centuries, when Late Khotanese must have already been the socially accepted variety of everyday use. Such linguistic developments crept, only occasionally at first, into manuscripts in Old Khotanese, the older literary variety of Old Khotanese reserved for religious literature and formal speech (Emmerick, 1987, 42) but surfacing increasingly often until Old Khotanese was abandoned even in writing, presumably as a consequence of the Tibetan occupation of Khotan, which brought about a break in the tradition of Buddhist learning between the 8th and 9th century (Kumamoto, [2]2012, 149). Manuscripts from Khotan are therefore either in Old or in Late Khotanese; manuscripts from Dunhuang are all in Late Khotanese.

Faint echoes of the oral literature of Iranian descent can only be glimpsed in the legends on the foundation of Khotan and the stylistic tendency to variation rather than repetition (Skjærvø, 1998; [2]2012, 127–128). The beginnings of written literature and Buddhist literature in Khotanese coincide and can be placed in the 5th century, when the earliest manuscripts, including some folios of the *Book of Zambasta* and translations of the *Suvarṇabhāsottamasūtra* and other *sūtra*s, can be dated paleographically (Sander, 2005), and when the author of the *Book of Zambasta*, containing itself translations of *sūtras*, regrets that still "the Khotanese do not value the Law at all in Khotanese" (23.4; Emmerick, 1968) and prefer Sanskrit as the language of the dharma (see Maggi, 2004).

Most Khotanese Buddhist texts were probably translated from Sanskrit, though many parallel texts are known to us today only in Chinese or Tibetan. The Khotanese adopted various translation techniques for rendering the terminology of their originals, and Khotanese Buddhist terminology never developed into a fixed system of equivalences such as was established by the Tibetan translators: one Sanskrit term may be rendered by more than one genuine or borrowed Khotanese equivalent and vice versa. As many Prakrit and Sanskrit words had entered the Khotanese vocabulary before the earliest extant texts, a solution at hand was to continue simply using Sanskrit technical terms (see Emmerick, 1983; Degener, 1989b; Skjærvø, [2]2012, 126–134). Thus, loanwords are less numerous in Old Khotanese texts, where interpretative translations in line with the exegetical tradition are frequently found, than in Late Khotanese texts written after centuries of acquaintance with Buddhism (von Hinüber, 1973, 5–6).

Khotanese versions range from close translations to free paraphrases. Translations of *sūtra*s, particularly the oldest ones, reproduce their originals as closely as possible, but the Khotanese did not content themselves with literal renditions and took care not to misrepresent the meaning of their originals, so that amplifications and comments were sometimes inserted. The greatest freedom is reached in the case of edifying tales, which are recast rather than just paraphrased, as the Late Khotanese *Sudhanāvadāna* shows (De Chiara, 2013b).

Since few manuscripts are dated, let alone the texts themselves, Khotanese Buddhist literature is best presented systematically rather than chronologically.

Original Doctrinal Compendia

Book of Zambasta

The *Book of Zambasta* is an Old Khotanese poem known to us from a largely preserved 7th-century CE manuscript and a number of variant fragments (Emmerick, 1968), the earliest ones of which can be dated to the 5th century CE (Maggi, 2004; see also Martini, 2013). It expounds the teachings of Mahāyāna Buddhism with a polemic attitude toward what the text itself derogatorily terms "Hīnayāna" (Martini, 2013). The conventional title *Book of Zambasta* refers to the name of the official who ordered the text to be written or copied in the main manuscript. The work consisted of 3,547 verses and 24 chapters: chapters 2–14 are virtually complete; chapters 1 and 15–19 are fragmentarily preserved; a lost chapter existed between chapters 21 and 22 (Maggi, 1998b, 287–288); chapters 17–18 are in reality a single chapter (Maggi & Martini, 2014); of chapters 22, 23, and 24, there survive 100 of 336, 228 of 372, and 336 of 659 verses respectively.

As an early indigenous composition, the work displays a concentric structure, which presumably betrays Iranian oral composition techniques: the structurally and thematically central chapter 13 expounds the advantages of the Mahāyāna over earlier Buddhism and is surrounded by the doctrinal chapters 3–12 and 14–21, which are in turn surrounded by the more legendary chapters 1–2 and 22–24 (Maggi, 2004; see also Martini, 2014, on the formal features and compositional process of chapter 5). The more doctrinal chapters 3–21 of the *Book of Zambasta* deal with the following:

- chapter 3: meditation on loving kindness (*maitrī*);
- chapter 4: thought of awakening (*bodhicitta*) and Buddha nature (*tathāgatagarbha*; Degener, 1989a);
- chapters 5–6: the Buddha's teaching in a Vijñānavāda perspective;
- chapters 7–9: emptiness (*śūnyatā*; Khot. *ttuśśāttāti*);
- chapters 10–12: bodhisattva career;
- chapters 14–16: Mahāyāna Buddhology and bodhisattva path;
- chapters 17–19: fallacy of worldly pleasures; and
- chapters 20–21: meditation on impurity (*aśubhabhāvanā*).

Chapter 1 is a *sūtra* preached by Bodhisattva Samantabhadra. Free paraphrases of *sūtras* are chapters 2 (*Bhadramāyākāravyākaraṇa*; Régamey, 1990), 3 (*Da fangguang fo huayan jing xiuei fen* [大方廣佛華嚴經修慈分]; Duan, 2007; Martini, 2011), 22 (*Maitreyavyākaraṇa*; Kumamoto, forthcoming), 23 (*Tathāgatapratibimbapratiṣṭhānuśaṃsa*), and the second half of chapter 24 (*Candragarbhasūtra*; Nattier, 1991). Chapter 5 recalls the theme of such texts as the *Pitāputrasamāgamasūtra* (Martini, 2014, 339n8), chapter 12 the section on moral conduct in Asaṅga's *Bodhisattvabhūmi*, and the first half of chapter 24 such accounts of the Buddha's life as the *Lalitavistara*. The work quotes many, often unsourced texts, including the ones in chapter 6, which contains "a verse… from each *sūtra*" (6.1), though only four from the *Vajracchedikā* (6.15), *Saddharmapuṇḍarīka* (6.3), *Hastikakṣya* (6.41; see Liu & Chen, 2014, 294n3), and *Suvarṇabhāsottama* (6.24) have been identified.

The survival of numerous fragments from different manuscripts besides the main one reveals the positive reception and popularity that the *Book of Zambasta* enjoyed in Khotan. A folio from a 5th-century CE manuscript found in non-Mahāyāna Qarashahr, where it was presumably brought with a view to propagate the Mahāyāna, attests to the importance that the Khotanese attached to the text (Maggi, 2004). A complete Late Khotanese version of the Buddha's preaching to his father (ch. 5) in the *Mañjuśrīnairātmyāvatārasūtra* shows that the text was still regarded as authoritative in the 10th century, when Old Khotanese texts were no longer being copied.

Minor Doctrinal Compendia

An unparalleled Old Khotanese prose – the *Bodhisattva Compendium*, known from remains of one manuscript from Khotan (see the list in Skjærvø, 2002, 607) – is a treatise on the bodhisattva doctrine. Superimposition of Late Khotanese forms on the original text by means of additional vowel marks and interlinear additions of syllables suggests use of the manuscript over time.

The *Mañjuśrīnairātmyāvatārasūtra* is a complete Late Khotanese original composition in verse written by (a) Devendraśūrasiṃha on a Dunhuang roll under King Vīśa' Śūra (r. 967–978 CE). It is a compilation on the doctrine of selflessness (*nairātmya*), which draws on various sources, including earlier Khotanese literature (Bailey, ²1981, 113–135): some 70 verses are from the *Book of Zambasta* (Emmerick, 1968, 440–453); 17 lines repeat an amplification in the Khotanese *Vajracchedikā Prajñāpāramitā*; more or less free quotations are taken from the *Vimalakīrtinirdeśasūtra* and *Laṅkāvatārasūtra*; and an unparalleled description of the three afflictions (*kleśa*) of attachment (*raga*; Khot. *bryāä*), aversion (*dveṣa*; Khot. *ysurri*), and delusion (*moha*; Khot. *jaḍia*) as doctrinal monsters and kings of the *rākṣasas* is of special interest (Emmerick, 1977a; 1977c; 1988; 1997; 1998; Degener, 1986).

Another metrical compendium of Mahāyāna doctrines in the form of question and answer, most likely a Khotanese original composition, is the Late Khotanese *Book of Vimalakīrti* contained in two Dunhuang manuscripts and lacking the beginning (Bailey, vol. III, 1945–1985, 48–50; Skjærvø, 2002, 489–499). It opens with a description of the ten stages of the bodhisattva path (*bhūmi*) and quotes passages from and mentions several texts, and an unsourced quotation from the *Ratnakūṭa* is found. It also has a section about the prohibition of drinking wine and eating meat, which recalls chapter 8 of the *Laṅkāvatārasūtra* (see also Maggi, 2013, with references).

Avadāna Literature

A concise and lively style characterizes Khotanese *avadānas*, whether in verse or in prose. All are contained in Late Khotanese manuscripts from Dunhuang.

The *Sudhanāvadāna*, in two recensions, tells in verse the love of Prince Sudhana (identified with the Buddha) and the fairy Princess Manoharā, their separation, Sudhana's journey in search of his wife, and their final reunion (De Chiara, 2013a;

ly style characterizes Khotanese
r in verse or in prose. All are
Khotanese manuscripts from

dāna, in two recensions, tells in
Prince Sudhana (identified with
the fairy Princess Manoharā,
Sudhana's journey in search of
final reunion (De Chiara, 2013a;

2014). It includes motifs from folk tales (Degener, 2013). The Khotanese version is not a translation of any of the known versions of the story and shows exclusive agreements with the Sanskrit *Sudhanakinnaryavadāna* of the 11th-century Kashmiri poet Kṣemendra (De Chiara, 2013b).

Most of the prose *Aśokāvadāna*, only the beginning of which survives, actually derives from the *Kuṇālāvadāna*, though it is arranged differently from the Sanskrit and other versions (Bailey, ^{2}1981, 40–44; 1966; Dragoni, 2013–2014). The lost part may have referred to Aśoka's and Kuṇāla's role in the foundation of Khotan as it is found in Tibetan and Chinese sources (Skjærvø, 1987).

Two episodes of a *Kaniṣkāvadāna* are extant (Bailey, vol. II, 1945–1985, 107–108; 1965, 107–108): inspired by the four guardian kings (*lokapālas*), who – disguised as boys – build a *stūpa* of mud, King Kaniṣka has a *stūpa* and a monastery built; his spiritual adviser, Aśvaghoṣa, casts a lump of clay on the *stūpa*, and an image of the Buddha predicts his awakening. Similar stories occur elsewhere, but only the Khotanese organized them into a narrative.

An incomplete *Nandāvadāna* in prose exemplifies compensation for liberality and retribution for avarice through the story of the stingy merchant Nanda and his generous servant: the servant is reborn as Nanda's rich son and Nanda as the blind and misshapen son of a beggar woman (Bailey, ^{2}1981, 45–47; Emmerick, 1970b; 1973; see Handurukande, 1984 for the Sanskrit).

The beginning of the *Love Story*, an unparalleled metrical *avadāna*, recounts the falling in love of a householder's son and a minister's daughter (Maggi, 1997).

The Khotanese *avadāna*-like *Rāmāyaṇa* gives the Hindu myth of Rāma and Sītā a Buddhist setting (Bailey, vol. III, 1945–1985, 65–76; 1940–1942) and turns it into a Buddhist myth by stating that Rāma (identified with the Buddha) defeated the chief Hindu gods Śiva and Viṣṇu (Emmerick, 2000). In the opening episode, not found in Vālmīki's *Rāmāyaṇa*, Paraśurāma avenges his Brahman father by killing King Daśaratha, Rāma's father, and then goes on slaying kings and setting up Brahmans until he is in turn killed by Rāma and his brother Lakṣmaṇa (identified with the future buddha Maitreya). The text abounds in fable material.

Mahāyāna *Sūtras* and Related Texts

Prajñāpāramitā Literature

Scriptures on the perfection of wisdom (*prajñāpāramitā*; Khot. *prajñāpārāmatā*) range from very long to extremely short *sūtras*. In Khotanese, only short texts are known, mostly from Dunhuang.

A complete Khotanese version of the *Vajracchedikā Prajñāpāramitā*, an early summary of the *Prajnāpāramitā* teachings, was written before 941 CE (Bailey, vol. III, 1945–1985, 20–29; Konow, 1916) and is preceded by a metrical introduction, which also explains the title as what "shatters all acts (and) defilements, as well as obstructions (and) grievous sins, like diamond" (2r4–v2). The Khotanese version deviates partly from the Sanskrit original, as the translator endeavored to render the meaning of the original through paraphrases and additions, some of which derive from his knowledge of Asaṅga's commentary, the *Triśatikāyāḥ Prajñāpāramitāyāḥ Kārikāsaptati* (Degener, 1989b). A commentary in 17 stanzas replaces the single final Sanskrit stanza (Emmerick, 1977a).

A translation of the longer *Hṛdayasūtra*, a highly condensed summary of the *Prajnāpāramitā* teachings, survives in part (Skjærvø, 1988), but a complete commentary on the shorter *Hṛdayasūtra* titled *Mahāprajñāpāramitāsūtra* – not to be confused with the homonymous collection in the Chinese canon (T. 220) – is extant (Bailey, ^{2}1981, 54–61), some statements of which indicate its author's affiliation with the Vijñānavāda (Lancaster, 1977).

The only witness of a late Old Khotanese version of the tantric *Adhyardhaśatikā Prajñāpāramitā* is a manuscript from Khotan that alternates esoteric sections in Sanskrit with exoteric sections in Khotanese (Emmerick & Vorob'ëva-Desjatovskaja, 1995, 24–34). The latter are an integral part of the *sūtra* and extol the esoteric parts, which the translator decided to keep in their original linguistic shape. The Sanskrit text of the work was only partially known from this Khotanese manuscript before the recent discovery of an almost complete Sanskrit manuscript from Tibet (see Tomabechi, 2009).

Three Dunhuang manuscripts preserve the late compilation titled *Kauśikaprajñāpāramitā* in Sanskrit in Late Khotanese orthography (Bailey, vol. III, 1945–1985, 102, 118; vol. V, 356–359).

Saddharmapuṇḍarīkasūtra, *Buddhāvataṃsakasūtra*, and Related Texts

A Late Khotanese metrical summary of the *Saddharmapuṇḍarīkasūtra* from Dunhuang was meant to provide people "with the *sūtra*'s meaning in the Khotan language" (Bailey, ^{2}1973, 3). This and the substantial manuscript remains of the Sanskrit text from Khotan (see Chandra, ^{2}1977; Wille, 2000) suggest that the Khotanese may have used the Sanskrit original instead of Khotanese translations.

Two fragments belonging to a single folio from Khotan attest to the existence of an Old Khotanese translation of the *Bodhisattvagocaropāyaviṣayavikurvāṇanirdeśa* (Emmerick & Vorob'ëva-Desjatovskaja, 1995, 225–226; Chen, 2010).

A paraphrase of 16 stanzas of the *Bhadracaryādeśanā* is found in the *Book of Zambasta* (11.62–77). A complete Late Khotanese metrical version is known from a Dunhuang manuscript (Asmussen, 1961). This devotional text closes the *Gaṇḍavyūhasūtra* but was soon regarded as an independent text. In it, the believer confesses his sins and expresses the hope to be reborn in Sukhāvatī, Buddha Amitābha's "pure land," and attain awakening. The Khotanese translation adds an initial invocation and a final prayer.

The term *deśanā* means here both "confession" of sin for future restraint and "profession" of faith and vows to attain awakening and rescue beings from suffering, the first being a prerequisite to the latter. The *Bhadracaryādeśanā* is one of several Late Khotanese *deśanā* texts, among which is the *Deśanāparivarta*, extracted from the *Suvarṇabhāsottamasūtra* and transmitted separately. Further *deśanā* texts composed in Khotan are a metrical *deśanā* (Bailey, ^{2}1981, 53, 62–66; 1962) and the *Verses of Prince Tcūṃ-ttehi*: (a son of King Viśa' Sambhava; r. 912–966 CE) from Dunhuang (Bailey, ^{2}1981, 47–52; Emmerick, 1980), as well as the incomplete *Hymn to Amitāyus* (Amitāyus being another name for Amitābha) from Khotan (Bailey, vol. IV, 1945–1985, 36–37, 129–135).

The Late Khotanese metrical *Karmāṃ deśana* from Dunhuang, possibly an original work, deals with confession from a Mahāyāna viewpoint: only by recognizing the insubstantiality of all things, including one's acts (*karman*) and their ripening (*vipāka*), does one attain awakening (Emmerick, 1977b).

Closely connected with the practice of *deśanā* are *namo* (adoration) texts probably composed in Khotan. These contain lists of names of buddhas and bodhisattvas, including local buddhas unknown to the Indian tradition. The ones currently called *Deśanā I* and *Deśanā II* contemplate the existence of billions of buddhas in crores of aeons and promise atonement for sins to those who hear, recite, or have their names written (Skjærvø, 2002, 542–550; for a variant, see Bailey, vol. III, 1945–1985, 112–116). That *deśanā* texts, *namo* texts, and such theoretical texts as the *Karmāṃ deśana* all belong together is shown by the fact that a single manuscript contains a *namo* text, the *Bhadracaryādeśanā*, the *Deśanāparivarta*, and the *Verses of Prince Tcūṃ-ttehi*: among others and that, in another manuscript, the *Karmāṃ deśana* is preceded by a *namo* text. Other Khotanese devotional texts are the *Triśaraṇa* formula (Skjærvø, 2002, 486–487; see also Bailey, vol. III, 1945–1985, 64) and several invocations from Dunhuang.

A complete folio from Khotan preserves part of an early Khotanese text that is known from the two Chinese versions *Da fangguang fo huayan jing busiyi fo jingjie fen* (大方廣佛華嚴經不思議佛境界分; T. 300) and *Da fangguang fo huayan rulai busiyi jingjie jing* (大方廣如來不思議境界經; T. 301) translated by the Khotanese monks Devendraprajña and Śikṣānanda respectively. The Khotanese text seems to be closer to Devendraprajña's version (Skjærvø, 2002, 332–333; Chen, 2012, 270–273).

Ratnakūṭa, *Sukhāvatīvyūha*, and Related Texts

Fragments of three manuscripts from Khotan witness an Old Khotanese translation of the *Kāśyapaparivarta* (Skjærvø, 2003), the most ancient core of the *Mahāratnakūṭa* collection in the Chinese canon (T. 310). The text circulated in Khotan, as it did in India, under the title *Ratnakūṭa* (Khot. *Ratnakūla*), as it is so called in the *Book of Zambasta*, the *Dharmaśarīrasūtra*, and the Khotanese version itself. The Sanskrit is extant in a virtually complete manuscript and some fragments from Khotan (Vorobyova-Desyatovskaya, 2002; see also Martini, 2010). In a newly identified folio, the Khotanese rendering "What am I seeking?" (ch. 23) surprisingly reflects a mistake in the main Sanskrit manuscript, where an original *kim aham arghāmīti* (What am I worth?) was replaced in error with *kim ahaṃ margāmīti* (What am I seeking?), a possible reading that had eluded the attention of modern scholars (Maggi, forthcoming a). Several sourced and unsourced quotations from the *Ratnakūṭa* and other texts of the *Mahāratnakūṭa* collection are to be found in the *Book of Zambasta* (Martini, 2010; 2013, 31–41; Dhammadinnā, 2013).

Book of Zambasta (Martini, 2010;
nadinnā, 2013).

The only surviving folio of an Old Khotanese translation of the longer *Sukhāvatīvyūha* contains the homage and the first lines of the song uttered in praise of Buddha Lokeśvararāja Buddha Amitābha in a past life of his as the bodhisattva named Dharmākara (Skjærvø, 2002, 176). The underlying Sanskrit recension was presumably somewhat different from the well-known Nepalese one.

Saṅghāṭasūtra, Suvarṇabhāsottamasūtra, and Other *Sūtras*

The *Saṅghāṭasūtra* must have been very popular in Khotan, as it is represented by more than 140 folios and fragments from at least 27 manuscripts of an Old Khotanese version. It was one of the first *sūtras* translated into Khotanese, since it essentially agrees with the oldest Sanskrit manuscript of the text from about 500 CE, and a manuscript can be dated paleographically to the 5th or early 6th century (Canevascini, 1993; see also Duan, 2010; Maggi, forthcoming b).

The Late Khotanese *Bhadrakalpikasūtra*, a *sūtra* on the names of the buddhas (*buddhanāmasūtra*), is known from two Dunhuang manuscripts, one dated from 943 CE (Bailey, ^{2}1981, 75–90; Konow, 1929). The Khotanese version differs from the Chinese and Tibetan translations (T. 425; D 94; Skilling, 2009, 199). There were two traditions concerning the number of buddhas who will appear in the good aeon (*bhadrakalpa*): they will be five according to an earlier tradition, but one thousand according to a later one. The Khotanese *Bhadrakalpikasūtra* apparently conflated the two traditions, as it speaks of 1,005 buddhas, though the preserved text lists only 998 names (Emmerick, ^{2}1992, 20–21; see above on Late Khotanese *namo* texts, including the *Deśanā I* and *II* contained in the same manuscript as the *Bhadrakalpikasūtra*).

The *Bhaiṣajyagurusūtra* is an early Mahāyāna text devoted to Bhaiṣajyaguru, the object of a special cult as the buddha of medicine in all its aspects up to awakening as a healing of rebirth. The Old Khotanese translation, preserved in a number of fragments (see the list in Maggi, 2009, 386n191), does not correspond closely with the Sanskrit and Chinese versions (Skjærvø, ^{2}2012, 135).

Ten folios from Khotan preserve part of an Old Khotanese version of the *Vimalakīrtinirdeśasūtra* (Skjærvø, 1986; Emmerick & Vorob'ëva-Desjatovskaja, 1995, 213–214; for the Sanskrit, see Study Group, 2004). It is fairly close to the Sanskrit and Tibetan, and, where it differs, it occupies a position intermediate between Kumārajīva's (early 5th-cent.) and Xuanzang's (mid-7th-cent.) Chinese translations (T. 475–476; see also Skjærvø, 1986, 230).

An early scripture connected with the *Vimalakīrtinirdeśasūtra* is the *Śūraṅgamasamādhisūtra*, a text about meditation on emptiness and the concentration (*samādhi*) called *śūraṅgama* as a means to the attainment of awakening. Substantial remains of two manuscripts of an Old Khotanese version are extant (Emmerick, 1970a; Skjærvø, 2002, 220, 223, 266–268, 329, 409–423). One of the manuscript fragments of the Sanskrit original betrays Khotanese influence in the spelling *manyuśrī* for Mañjuśrī's name. The Khotanese version differs in a number of places from the Tibetan and the Chinese translations (Emmerick, 1970a, 13, 23).

The *Suvarṇabhāsottamasūtra* is the most largely preserved Khotanese *sūtra* translation (Skjærvø, 2004; see also Duan, 2006). All manuscripts are in Old Khotanese and come from Khotan with the exception of the metrical version of the Late Khotanese *Deśanāparivarta* from Dunhuang (see above). The Khotanese manuscripts represent all five stages of development of the Sanskrit text with the exception of the very first (Skjærvø, vol. I, 2004, 32–71): recension A (see T. 663; Dharmakṣema's version), the much longer recension B (see the text in Nobel, 1937), recension C (see T. 664, which adds new material to Dharmakṣema's version), recension D (see D 556), and recension E (see T. 665; Yijing's [義淨] version). The Old Khotanese materials go back to an old version, which essentially agrees with recension B but preserves a better text than the Nepalese manuscripts. In the course of time, the copyists attempted to improve the text, and agreements with the Chinese translations suggest the existence of a Central Asian recension. The Late Khotanese *Deśanāparivarta* agrees with Yijing. A summary of the text is offered, among other matters, by the introduction to the Old Khotanese version.

A Late Khotanese metrical *Pradakṣiṇāsūtra*, known from a Dunhuang manuscript possibly to be dated to 995 CE (Bailey, ^{2}1981, 72–74; 1974), diverges from the other known versions and presents itself as a *sūtra* preached by the Buddha about the advantages deriving from worshipping Buddhist monuments.

The *Karmavibhaṅga* is a popular text on the consequences of good and evil actions. The Old Khotanese version, preserved in three fragmentary manuscripts, does not contain the amplifications characteristic of the other known versions – including the Central Asian Sanskrit one – and must reflect an early stage of the text (Maggi, 1995; see Kudo, 2004 for the Sanskrit).

Two folios of an early Late Khotanese *Dharmaśarīrasūtra* from Khotan are extant (Bongard-Levin & Tyomkin, 1969; Maggi, 2009, 294–296). The text lists categories of Mahāyāna doctrine arranged by number. The surviving Khotanese preserves the core of the text and looks like an abbreviated paraphrase, if compared with other known versions (Kumamoto, 1996), from which it also diverges in that it contains a list of *sūtras*.

A fragmentary folio of a manuscript from Khotan contains the opening section of an Old Khotanese translation of the *Hastikakṣyasūtra*, a verse of which is quoted in the *Book of Zambasta* and whose title is mentioned in the *Book of Vimalakīrti* in connection with non-origination of phenomena (Skjærvø, 2002, 577–578; Chen, 2012, 273–276; see also Liu & Chen, 2014).

Dhāraṇīs

Dhāraṇīs probably originated as a support for memorization of points of doctrine and meditative experiences but eventually developed into protective spells including invocations, partially intelligible words, and partially meaningless syllables, which characterize tantric texts referred to as *dhāraṇī*(*sūtra*)s.

The *Aparimitāyuḥsūtra* contains a *dhāraṇī* taught by the Buddha for lengthening one's lifespan by venerating Buddha Aparimitāyus and the *sūtra* itself. A Late Khotanese version has come down to us in two manuscripts and one folio from Dunhuang (Duan, 1992). A fragment from Khotan seems to belong to a different version (Maggi, 1998a, 490).

Of the *Mahāsāhasrapramardanī*, a collection of *dhāraṇīs* offering protection from demons, a Late Khotanese excerpt about demons causing children's diseases survives partially in a Dunhuang bilingual manuscript in Chinese and Khotanese used as an amulet (Maggi, 1996; Skjærvø, 2002, 583). Other amulets (*rakṣās*) with apotropaic drawings, *dhāraṇīs*, or texts (see e.g. Skjærvø, 2007; Duan, 2009; and the list in Maggi, 2009, 400n226) give expression to the most extreme form of folk beliefs in Buddhist Khotan.

An Old Khotanese translation of the *Anantamukhanirhāradhāraṇīsūtra*, displaying a few agreements with some of the Chinese translations (T. 1009, 1011–1018), is known from a number of folios and fragments from four manuscripts from Khotan (see Skjærvø, ^{2}2012, 135; and the list of mss. in Skjærvø, 2002, 607; other mss. in Emmerick & Vorob'ëva-Desjatovskaja, 1995, 38–40; Duan, 1993). The *dhāraṇī* proper is found in Late Khotanese orthography on a Dunhuang roll (Bailey, vol. III, 1945–1985, 77–78).

Five fragments from four manuscripts from the Khotan region witness an archaizing Late Khotanese version of the *Raśmivimalaviśuddhaprabhānāmadhāraṇī* (Emmerick & Vorob'ëva-Desjatovskaja, 1995, 233; Skjærvø, 2002, 24–25, 383–384; Yoshida, 2004, 27–28; see also Chen, 2012, 276–278).

A Late Khotanese *Sumukhasūtra* containing several *dhāraṇīs* preached by the Buddha, the bodhisattva Vajrapāṇi, and other bodhisattvas and deities against all evils and for long life is extant in a Dunhuang manuscript of 943 CE (Emmerick, 1997–1998).

Scanty remains of an Old Khotanese translation of the *Agrapradīpadhāraṇī* survive in a fragment from Khotan (Skjærvø, 2002, 224; Chen, 2012, 267–270).

An archaizing Late Khotanese version of the *Jñānolkadhāraṇī* is found on several folios from at least five partly unpublished manuscripts from Khotan (Emmerick & Vorob'ëva-Desjatovskaja, 1995, 21–24; Skjærvø, 2002, 349, 355, 451), which attest to the popularity of this text aimed at protection and deliverance of beings (the correspondence with T. 1397 and 1398 is not close; Leumann, 1920, 160–161).

Two Late Khotanese *dhāraṇīs* from Khotan without known parallels are the *Avalokiteśvaradhāraṇī* and *Amṛtaprabhadhāraṇī*. In the archaizing *Avalokiteśvaradhāraṇī*, devotion to the compassionate bodhisattva Avalokiteśvara is expressed in the initial confession formula (*deśanā*) and in one of the protective *dhāraṇīs* that the text contains (Emmerick & Vorob'ëva-Desjatovskaja, 1995, 43, 239–250; see also Maggi, 1998b, 285). The *Amṛtaprabhadhāraṇī* refers to itself as a *sūtra*, mentions Buddha Amitāyus three times and the bodhisattva Avalokiteśvara together with another bodhisattva whose name is lost in a gap, and aims at protection from diseases and various evils (Skjærvø, 2002, 370–373).

Three Sanskrit *dhāraṇīsūtras* in Late Khotanese orthography are known: *Amoghapāśahṛdayadhāraṇī* (Bailey, vol. V, 1945–1985, 325–326), *Buddhoṣṇīṣavijayadhāraṇī* (Bailey, vol. V, 1945–1985, 368), and *Sitātapatradhāraṇī* (Bailey, vol. V, 1945–1985, 359–376).

Hymns

Two texts are known to belong to the genre of hymns in praise of the Buddha (*stava, stotra*). A bilingual fragment preserves a tiny portion of Triratnadāsa's (5th century?) *Guṇāparyantastotra* in Sanskrit and Old Khotanese. The manuscript, probably produced in Khotan though allegedly found in the Kucha region on the northern branch of the eastern Silk Route, alternates single Sanskrit stanzas with their

, 2002, 24–25, 383–384; Yoshida,
so Chen, 2012, 276–278).
nese *Sumukhasūtra* containing
preached by the Buddha, the
āṇi, and other bodhisattvas and
evils and for long life is extant
anuscript of 943 CE (Emmerick,

of an Old Khotanese translation
hāraṇī survive in a fragment from
002, 224; Chen, 2012, 267–270).
Late Khotanese version of the
found on several folios from
unpublished manuscripts from
& Vorob'ëva-Desjatovskaja, 1995,
2, 349, 355, 451), which attest to
is text aimed at protection and
ngs (the correspondence with
ot close; Leumann, 1920, 160–161).
ese *dhāraṇīs* from Khotan with-
s are the *Avalokiteśvaradhāraṇī*
dhāraṇī. In the archaizing
ṇī, devotion to the compassion-
lokiteśvara is expressed in the
mula (*deśanā*) and in one of the
that the text contains (Emmer-
jatovskaja, 1995, 43, 239–250; see
85). The *Amṛtaprabhadhāraṇī*
ra, mentions Buddha Amitāyus
he bodhisattva Avalokiteśvara
er bodhisattva whose name is
ms at protection from diseases
jærvø, 2002, 370–373).
āraṇīsūtras in Late Khotanese
wn: *Amoghapāśahṛdayadhāraṇī*
–1985, 325–326), *Buddhoṣṇīṣa-*
y, vol. V, 1945–1985, 368), and
(Bailey, vol. V, 1945–1985,

to belong to the genre of hymns
lha (*stava, stotra*). A bilingual
tiny portion of Triratnadāsa's
paryantastotra in Sanskrit and
nanuscript, probably produced
llegedly found in the Kucha
rn branch of the eastern Silk
gle Sanskrit stanzas with their

Khotanese translation, which is possibly in verse (Skjærvø, 2002, 136; Hartmann & Chen, forthcoming). And the Late Khotanese *Jātakastava*, possibly an original poetic composition written under King Viśa' Śūra, is entirely preserved in a Dunhuang manuscript. It is based on the stories taken from the Buddha's former births and extols the virtues of the Buddha-to-be through concise summaries of 52 stories, each one closed by a praising formula (Dresden, 1955).

Esoteric Buddhism

That Vajrayāna or esoteric Buddhism had followers among the Khotanese is documented directly by only a few untitled Late Khotanese texts in 10th-century manuscripts from Dunhuang. The so-called *Vajrayāna Text*, a short prose treatise on the rosary, belongs to a genre that is also known from Tibetan texts from Dunhuang and is most likely based on a Tibetan source (Skjærvø, 2002, 292–296; see also Stein, 1987, 268–272). The *Vajrayāna Verses* (dated 971 CE), the *Vajrayāna Verses of Cā Kīmä-śani*, and the beginning of another Vajrayāna text are *deśanās* written on a single roll (Skjærvø, 2002, 551–556). Finally, Vajrayāna is mentioned in the colophon of the *Jātakastava*, two letters in verse, and the *Sanskrit-Khotanese Conversation Manual.*

Buddhism in Non-Doctrinal Texts

The Buddhist environment in which they were produced often surfaces in Khotanese non-doctrinal literary texts. Thus, two thirds of the so-called *Lyrical Poem*, preserved in six Dunhuang manuscripts, are devoted to the magnification of love, but the rest exhorts the reader to abstain from worldly pleasures and recalls Indian mythological instances of men ruined by women (Kumamoto, 2000).

Buddhist monks often feature in Late Khotanese epistolary poetry as the authors of fictive letters in verse contained in 10th-century Dunhuang manuscripts, which elaborate on the theme of separation of travelers on the road from family, teachers, and friends in the homeland (see e.g. Kumamoto, 1991).

Khotanese panegyrical literature is of course imbued with Buddhism. The metrical *Panegyric on King Viśa' Kīrtta* from Khotan celebrates the king's funding, in 806 CE, of religious activity for the sake of welfare in his reign under Tibetan sway (Skjærvø, 2002, 285). The metrical *Panegyric on King Viśa' Dharma*, written when the king sent an embassy to Dunhuang in 982 CE to ask for the hand of a Chinese princess, opens with a lengthy Vajrayāna invocation mentioning the buddha Vairocana (Skjærvø, 2002, 522–524). The elaborate prose *Panegyric on King Viśa' Saṃgrāma* – Viśa' Saṃgrāma possibly reigned in 9th century – also from Dunhuang, praises the king, on the occasion of a ceremony performed by monks at the end of the rainy season, for erecting a monastery and his religious merits imparting well-being to Khotan (Bailey, vol. II, 1945–1985, 101–107; 1965).

Late Khotanese medical texts from 10th-century Dunhuang belong to the Indian ayurvedic tradition, which spread in Central Asia along with Buddhism. The *Jīvakapustaka*, preserved by a manuscript in Khotanese and Sanskrit (Bailey, vol. II, 1945–1985, 135–195; Konow, 1941; see also Chen Ming, 2005), opens with an antidote taught by the Buddha to Jīvaka, who is called "the king of physicians" in the *Mañjuśrīnairātmyāvatārasūtra* (l. 358). The Khotanese version of Ravigupta's *Siddhasāra* (Bailey, vol. I, 1945–1985, 1–104), whose Tibetan translation was included in the Tanjur (D 4434; Emmerick, 1980–1982) contains an introduction in verse, which states that the work was translated so that

> [b]y the truth of those Three Jewels, due to divine compassion and due to faith too, may all diseases be removed in both ways. May (all beings) obtain enlightenment as it may please them. (trans. Emmerick, 1983, 21)

It is significant that many words and sentences relating to Buddhism occur in the 10th-century *Sanskrit-Khotanese Conversation Manual* from Dunhuang (Kumamoto, 1988) and that the *Itinerary*, describing a journey to Kashmir under King Abhimanyugupta (r. 958–972 CE), pays special attention to *stūpas* and Buddhist monasteries on the way (Skjærvø, 2002, 524–526).

Local Literatures: Uighur

Although Buddhists were active in the First Turk Empire (552–612 CE), there is scant evidence of the dharma among the Turks during the Second Turk Empire (692–742 CE) and even less during the subsequent Uighur Steppe Empire (744–840 CE), especially since in the second half of the 8th century CE Manichaeism had become the state religion. Nevertheless, once this empire collapsed and various groups of Uighurs began migrating to the oasis cities of the Gansu corridor and the Tarim basin, they once again came into contact with Buddhism. However, it was not until the late 10th century that the Uighur elite began sponsoring the large-scale translation of Buddhist texts into their own language. And although this tradition continued up through the 17th century, the bulk of the extant Uighur Buddhist literature derives from the West Uighur Kingdom of the 9th to 14th centuries.

Discovery and Scholarship

The first Western scholar to take notice of this literature was S. Julien, who in his work on a catalogue of the Chinese Tripiṭaka, prepared under the auspices of Khubilai (Kublai) Khan in 1285–1287, came to realize that the dharma had also been translated into a Turkic language. And this observation was subsequently confirmed during the famous Silk Road expeditions of the late 19th and early 20th centuries, when Uighur Buddhist texts and a vast array of fragments were discovered.

The 1889–1890 Russian expedition to East Turkestan was the first to discover Uighur manuscripts. And this collection of texts, which was sent back to Saint Petersburg, was subsequently added to by N.R. Petrovskij, the Russian consul in Kashgar, and by N.N. Krotkov, the consul at Kulja and Urumqi and as a result of the expeditions of S.S. Oldenburg in 1909–1910 and 1914–1915 and those of S.E. Malov in 1909–1911 and 1913–1914. All of these manuscripts are now stored in the Institute of Oriental Manuscripts of the Russian Academy of Sciences.

Yet the Russians were not the only ones traversing the Silk Road. On account of "The Great Game," the British financed the Hungarian explorer Marc Aurel Stein for his three famous expeditions to East Turkestan in the years 1900–1901, 1906–1908, and 1913–1915, during which he discovered the famous walled-up library in cave 17 at Dunhuang, which was filled with manuscripts in numerous languages, including Uighur, which are now part of the Stein Collection at the British Library. The four German expeditions of Albert Grünwedel and Albert von Le Coq in 1902–1903, 1904–1905, 1905–1907, and 1913–1914 were, however, the most successful in acquiring Uighur Buddhist manuscripts. They are now housed at the Berlin-Brandenburgische Akademie der Wissenschaften.

Another major body of Uighur texts was acquired by the three expeditions financed by the Japanese count Ōtani in 1902–1904, 1908–1909, and 1910–1914, which are now housed for the most part in the Ryūkoku University Library in Kyoto. Two other collections are in the Bibliothèque nationale and the Musée Guimet in Paris.

In addition to these six major collections of Uighur Buddhist literature, there are several smaller ones in China, Finland, Sweden, and Turkey.

Upon the discovery of these manuscripts, scholars began the work of deciphering and translating them almost immediately. In Russia, the project of publishing the Uighur Buddhist manuscripts was initiated by the Turkologist W. Radloff, whose work was subsequently continued by S.E. Malov. Simultaneously in Berlin, F.W.K. Müller began the publication of the Turfan collection in the four issues of his Uigurica series (1908–1931). Following him, the publication of the Buddhist manuscripts housed in the Turfan collection was continued by a range of scholars in the series Türkische Turfantexte (1929–1958), and then the Berliner Turfantexte series (16 vols. from 1971 to 2013).

Such foundational philological work has also been carried out by other scholars working on other collections, such as the ongoing translations in the Xuanzangs Leben und Werk subseries, the Uighur texts published in volumes XII, XIV, XVII, and XXVII of the Bibliotheca Buddhica series, and J.R. Hamilton's two-volume edition of the manuscripts from Dunhuang (1971; 1986). In terms of current scholarship on Uighur Buddhist literature, it is important to note

the academic project Verzeichnis der Orientalischen Handschriften in Deutschland, which since 1987 has published 19 catalogues of Uighur Buddhist manuscripts and block prints. In addition, the entire Berlin collection is now available online either at Digitales Turfanarchiv or at the International Dunhuang Project. Other collections such as the Ōtani Collection of the Ryūkoku University Library are also accessible on the International Dunhuang Project website.

The Literature

The extant Uighur Buddhist literature is extensive and diverse. It is translated from several different source languages, and it covers the full range of Buddhist traditions (Elverskog, 1997). Thus, not only are there fragments from all five of the *āgamas* and a range of other *nikāya* texts, but there is also a full array of both Mahāyāna and tantric texts. In addition there are extant translations of the Mūlasarvāstivāda and Sarvāstivāda Vinayas as well as Chinese apocrypha and numerous commentaries on works of Vasubandhu. There are also original Uighur works.

Yet even though there is such a wide array of texts, it is unknown whether there ever developed an Uighur canon (Wilkens, 2013). Rather, it seems more likely that most Uighur Buddhist texts were translated on special occasions. In particular, it is clear that the desire to generate merit was a driving factor in the preparation of these translations. So much so, in fact, that there even developed a special text genre called "transfer of merit" (*buyan ävirmäk*). The Uighurs were also apparently greatly interested in texts related to the confession of sins.

Translations from Sanskrit

Although there are a few colophons that mention Uighur Buddhist texts having been translated from Sanskrit (Uig. *äntkäk*), it is unclear whether Uighur monks actually used Sanskrit texts as the basis for their translations. There is little evidence for direct translations from Sanskrit originals, though one example is the *Triskandhakadharmasūtra* alias *Vinayaviniścaya Upāliparipṛcchā*, which was used for the confession of sins by venerating the 35 bodhisattvas and was translated from Sanskrit into Uighur by Prajñāśrī (Hazai, 1976).

Another possible link to Sanskrit sources is evidenced in numerous Uighur Buddhist texts written in Brahmi script. Even though it is unlikely that these Brahmi-script texts are the earliest Uighur Buddhist texts, as argued by earlier scholarship, it is certainly the case that they represent a connection with the Sanskrit heritage in Central Asia. Moreover, judging from the large amount of bilingual Sanskrit/Uighur texts in Indian Brahmi script, it is clear that the knowledge of Sanskrit among Uighur monks was widespread (Maue, 1996; 2015).

While most of the Uighur and Sanskrit/Uighur texts written in Brahmi script are from a wide array of *nikāya* traditions, from *āgama* collections through Vinaya and Abhidharma to *gāthās* and *jātakas*, there are also some Uighur translations of Mahāyāna scriptures written in Brahmi script. One such text is a fragment that corresponds to a translation of the *Qianshou qianyan guanshiyin pusa guangda yuanman wuai da beixin tuoluoni jing* (千手千眼觀世音菩薩廣大圓滿無礙大悲心陀羅尼經; *Dhāraṇīsūtra* of the Thousand-Eyed and Thousand-Armed Bodhisattva Guanshiyin with a Vast, Wholly Perfect, Unimpeded and Great Compassionate Heart; T. 1060; Maue, 1996, no. 43).

On account of the vast majority of Uighur Buddhist texts having been written in the Sogdo-Uighur script, it is unclear for whom these Brahmi script texts were prepared. Indeed, whether Uighur Buddhist translations were prepared by monks for monks, or for both monks and laypeople, or eventually only for laypeople is difficult to judge. Nevertheless, from the numerous extant colophons, it is clear that it was mostly laypeople who ordered copies of these texts (Kasai, 2008).

At the same time, how these translations and their propagation fit into the economic base of monasteries and their income is unclear. We have a few Uighur documents about monastic financial matters, such as lists of alms and of regulations for preachers; however, we know little about how the production of texts fits into the Uighur Buddhist economy. Nevertheless, on the basis of his work on the glosses in Tocharian and Sanskrit texts, D. Maue has shown that Uighurs were involved in the production and/or use of Sanskrit texts (Maue, 2009; 2010). In addition, the existence of an Uighur version of a story about King Jīmūtaketu and his son Jīmūtavāhana, which is based on an Indian story that became famous through the drama *Nāgananda* by Harṣa, makes it clear that Uighurs were familiar with the Sanskritic tradition, even though they

rough the drama *Nāgananda*
ar that Uighurs were familiar
radition, even though they may not have translated directly from Sanskrit (Zieme, 2012c).

The Sogdian Tradition

Although the Sogdian influence on Old Turkic culture is widely accepted, there is very little evidence that Uighur Buddhist texts were actually translated directly from Sogdian. For example, fragment So 18276 in the Berlin Collection contains a colophon noting a heretofore unidentified Sogdian Buddhist *sūtra*, which confirms that either Sogdian and Uighur authors/scribes were either working together or a Uighur was copying a Sogdian text (Yoshida, 2008). Nevertheless, this one example belies the fact that Sogdian was not a main source language for Uighur Buddhist texts.

Even so, a few Uighur texts were written in Sogdian script (Fedakâr, 1991–1996). But since these texts are not dated, it is difficult to draw any definitive conclusions about the nature of Sogdian-Uighur translation history. In fact, it is quite possible that the reason these Uighur texts are in Sogdian script is simply because the scribes were more familiar with the Sogdian script than the newer Uighur one, a supposition that is lent further credence by the fact that some of the Uighur fragments of the *Saddharmapuṇḍarīka* and the *Vimalakīrtinirdeśa*, although written in Sogdian script, were actually translated from Chinese (Maue & Röhrborn, 1980; Zieme, 2000).

The Tocharian Tradition

The earliest layer of Uighur Buddhism is connected with the Tocharians, who had a strong Buddhist-oriented culture during the second half of the 1st millennium. Some colophons give clear evidence of translations from Tocharian into Uighur having taken place during the 10th and early 11th centuries. Among these are two prose works, the *Daśakarmapathāvadānamālā* (Garland of Legends Pertaining to the Ten Courses of Action) and the *Maitrisimit nom bitig* (*Sūtra* on the Meeting with Maitreya).

The *Daśakarmapathāvadānamālā* is a collection of ten books arranged according to the ten *karmapathas* (courses of action; Wilkens, 2010; a complete edition of the corpus by J. Wilkens is in preparation). Each book is embedded into a frame story in which the master teaches the pupil to avoid evil deeds by quoting stories from the extensive *jātaka* and *avadāna* literature (Geng, Laut & Wilkens, 2005). The origin of all these Uighur versions has not yet been identified (Wilkens, 2010), but some of the extant colophons (see Kasai, 2008) of the Uighur translations of the *Daśakarmapathāvadānamālā* attest that it was first translated from Tocharian B (*küsän tili*) into Tocharian A (*toxrı tili*) and then into Uighur (*türkčä*).

The *Maitrisimit nom bitig*, which focuses on Buddha Maitreya, was translated from the Tocharian *Maitreyasamitināṭaka*. It is now the focus of the project Gesamtedition der alttürkischen Überlieferung zur Maitreya Literature (Complete Edition of the Old Turkic Transmissions of the Maitreya Literature), led by J.P. Laut at Göttingen.

In addition to these two major works, there is a Uighur colophon that testifies to a translation of an unknown Buddhist commentary from Tocharian B into Uighur (*türk* [*tili*]). The unidentified commentary is a discussion about the characteristics of a bodhisattva, which also mentions meditation and the theory of emptiness. This reveals that the Uighur translations of Tocharian texts were based on not only *nikāya* but also Mahāyāna sources (Kasai, 2004; 2006).

The Chinese Tradition

The majority of Uighur translations were made from a wide variety of Chinese Buddhist texts. In most cases, however, we have no knowledge how the translations were actually produced, though we know some of the translators, such as Šıŋko Šäli Tutuŋ (see Röhrborn, 1998), who worked in the early 11th century. Nor do we know how or why certain Chinese texts were chosen to be translated. Nevertheless, on the basis of the extant material, it is clear that the Uighurs drew on two main source groups. The first were well-canonized texts such as Kumārajīva's version of the *Saddharmapuṇḍarīka-sūtra*, and the other were the Buddhist texts that were popular in the Dunhuang region.

Āgama Translations

Āgama translations were made from Chinese into Uighur (for an overview of the fragments known up to 2010, see Aydar, 2010; for a collection of studies on the Uighur Āgama fragments preserved in the Etnografiska Museet of Stockholm, see Kasai & Raschmann, forthcoming), though in most cases, these translations are not complete but rather extracts taken from Chinese *āgamas*. As such, the Uighur texts very often include the *āgama* passage in Chinese. In some cases, however, the extracted passages replace the Chinese character with dashes, dots, or circles (see photograph of Ch/U 7209 verso, edited in Kudara & Zieme, 1990, plate VII; a digital image is available at http://turfan.bbaw.de/dta/ch_u/images/chu7209versototal.jpg). How or why this was done is unclear. There were apparently no fixed rules for extracting *āgama* passages. But some manuscripts that give extracts of only *gāthās* are rather consistent in keeping to the rule. Their worth as Buddhist literature is not high, but since these compilations are word-for-word translations, one gets exact information on how a given Chinese word was understood by the translators. Despite the great number of fragments (more than 110, some of which are complete leaves), there are only a very few overlapping texts. One example is the *Candrasūtra* (see Zieme, 2000; also Raschmann & Wilkens, 2009, 33–47).

Prajñāpāramitā Literature

Most of the Uighur versions of texts belonging to the *Prajñāpāramitā* literature were recently assembled in a comprehensive volume (Yakup, 2010), in which a number of texts were compared to their Chinese sources including the *Vajracchedikā*, some related commentaries, and the *Hṛdayasūtra* (Heart *Sūtra*).

Saddharmapuṇḍarīkasūtra and Commentaries

Although the *Saddharmapuṇḍarīkasūtra* gained wide acceptance in Central and East Asia, there are no complete Uighur versions extant. However, quite a few different manuscripts and translations of the *sūtra* are known (Zieme, 2005b). Whether the Uighur version was translated from Sogdian or Chinese is still debated. Nevertheless, most of the Uighur fragments belong to chapter 25 (according to Kumārajīva's Chinese version), which is also known as an independent work entitled *Guan jing* (觀經; *Sūtra* on Guan[shiyin] [Avalokiteśvara]), in which Avalokiteśvara appears in 33 different shapes in order to become attractive to different groups of persons who wish to be rescued from their calamities.

Many Chinese commentaries to the *Saddharmapuṇḍarīkasūtra* are also known, and one of the most famous (*Miaofa lianhua jing xuanzan* [妙法蓮華經玄贊]; The Profound Praise of the Lotus *Sūtra* of the Wonderful Law; T. 1723) was translated into Uighur (Kudara, 1988).

Vimalakīrtinirdeśa and Commentaries

One of the famous and widespread Mahāyāna *sūtras* is the *Vimalakīrtinirdeśa*. There are several Chinese versions, but again it is Kumārajīva's rendering (T. 475) that was widely used in Central Asia and was also the source of the Uighur translation(s), of which fragments exist (Zieme, 2000a). A peculiar manuscript in the Turfan Collection of Berlin consists of large *pustaka* (palm-leaf shaped) leaves containing an Uighur commentary on the *Vimalakīrtinirdeśa* (Kasai, 2011). Even though there are abundant commentaries on this *sūtra* in Chinese, the Uighur manuscript does not closely match any of these. Thus, either the Uighur commentary was based on a totally unknown Chinese commentary or, as seems to be more plausible, it is a reworking by using Chinese commentaries rather freely and thus creating a new independent commentary. A further distinctive feature of this Uighur work is its lively similes that are used to demonstrate the meaning of *ālayavjñāna* (store consciousness), a central concept in Yogācāra philosophy (Kasai, 2011; 2009).

Suvarṇabhāsottama and Commentaries

That the *Suvarṇabhāsottama* (*Sūtra* of Golden Light) was the favorite *sūtra* among Uighur Buddhists is proven by the fact that manuscripts of its Uighur version(s) are found in nearly all collections of Turfan materials. The source text for the Uighur version was Yijing's (635–713 CE) Chinese translation (*Jin guangming zuisheng wang jing* [金光明最勝王經]; T. 665), although recent research shows that some other texts may have been consulted in the translation process (Wilkens, 2001).

The chapters of this *sūtra* are devoted to different themes, thus giving the impression of a kind of anthology of Buddhism. It starts with an account
of Buddha's life and ends with the
story of the hungry lioness. Two cha
on the confession of sins, which in Ui
played a great role for the laity. A

---

of Buddha's life and ends with the famous *jātaka* story of the hungry lioness. Two chapters are texts on the confession of sins, which in Uighur Buddhism played a great role for the laity. Another famous chapter explains the *rājaśāstra* (advice [for the] king) to keep the country peaceful and ordered; this *rājaśāstra* follows Indian concepts about how rulers or kings should behave in relation to people and realm. Other parts are praises of gods and bodhisattvas. The chapter on medicine interwoven with mantras is also based on Indian concepts explaining the four elements of the body (earth, water, fire, and wind), their relation to the seasons and to food, and so on.

The Saint Petersburg Collection has two large manuscripts that were written, according to their colophons, in Gansu in 1687 (first edited by Radloff & Malov, 1913–1917). These are the most recent manuscripts in the classical Uighur language. Uighur inscriptions of the Wenshushan grottoes in the same region have shown that the old literary language was still in use in the late 17th century for writing *ad hoc* texts (Yusup & Zhang, 2012). In recent years, S.-C. Raschmann edited a three-volume catalogue describing some one thousand Uighur fragments of the *Suvarṇabhāsottama* in the Berlin Collection, enabling further research on the text (Raschmann, 2000–2005). A recent bibliography on this Uighur text enumerates about 144 items for the years 1908–2013 (Uçar, 2013).

Buddhāvataṃsakasūtra

The *Buddhāvataṃsakasūtra* (*Sūtra* of Buddha's Garland of Flowers) is one of the largest *sūtras* of Mahāyāna Buddhism. There are three different versions in Chinese translations (in 40 *juan* [Prajña; T. 293], in 60 *juan* [Buddhabhadra; T. 278], and in 80 *juan* [Śikṣānanda; T. 279]), all translated into Uighur, to judge from extant fragments. However, the existence of a translation of the *sūtra* in 40 volumes can only be assumed based on the fact that the Uighurs had a joint edition of the *sūtras* in 60 and in 40 volumes (Kudara & Oda, 1983). Nevertheless, at least three different block-printed editions of the *sūtra* in 40 volumes existed (Yakup, 2008). The famous *Samantabhadracaryāpraṇidhāna* (Vows on the Practices of the Bodhisattva Samantabhadra), the final part of the last book, played a great role in some Uighur circles, as many fragments of manuscripts and block prints are extant (Zieme, 1982).

Mahāyāna *Mahāparinirvāṇamahāsūtra*

Besides some edited fragments of the Uighur version of the Mahāyāna *Mahāparinirvāṇamahāsūtra*, not much is known about this translation. Of special interest is a colophon, insofar as it contains the Indian author's name Dharmakṣema (385–433 CE), which so far is attested only in Chinese transcriptions. The Uighur form D(a)rma[k]šeme proves that the Sanskrit reconstruction of Tanwuchan (曇無讖) as Dharmakṣema is correct (Yusup, 1998).

Amitābha Buddhism

Amitābha Buddhism (Pure Land Buddhism) is presented by all its central scriptures, the *Guan wuliangshou jing* (觀無量壽經; *Sūtra* of the Contemplation on Amitābha; T. 365), as well as the *Larger Sukhāvatīvyūha* (Expansion of [the Buddha Realm Called] Sukhāvatī [Land of Bliss]; in two *juan*) and the *Amitābhasūtra* (the *Smaller Sukhāvatīvyūhasūtra*; T. 366; in one *juan*). The first is an original Chinese composition, despite its traditional claim of Sanskrit origin. This prose text, which presents and explains the 16 meditations, survived in only a very few leaves of a Uighur prose translation. But a larger part of the *sūtra* is known in a kind of reworking in Uighur alliterative stanzas in a Yuan-period block-printed version and therefore had better be regarded as an original Uighur text (Zieme & Kudara, 1985). The belief in Amitābha is well documented by a great variety of Uighur colophons. Moreover, a large four-*juan* work expounding the doctrine of Amitābha Buddhism by several quotations from the basic texts in the first three *juan* has to be mentioned, the last *juan* of which contains hagiographies of different persons beginning with famous Buddhist monks and ending with some laywomen. Probably modeled on Wang Rixiu's *Longshu (zengguang) jingtu wen* (龍樹[增光]淨土文; Text about the Pure Land, from Longshu; 1161 CE), the Uighur work entitled *Abitaki* has great value, as its Chinese original seems to be lost. *Abitaki* (*Amituo jing* [阿彌陀經]; *Sūtra* on [Buddha] Amitābha) is here not the *Amitābhasūtra* mentioned above but a generic title of a scripture of Amitābha Buddhism.

Säkiz yükmäk yaruk sudur

Some four hundred fragments of manuscripts and block prints are known from translations of the apocryphal Chinese *sūtra Foshuo tiandi bayang shenzhou jing* (佛説天地八陽神咒經; *Dhāraṇīsūtra* on the Eight Lights of Heaven and Earth, Spoken by Buddha), a comprehensive study of which was written by J. Oda and published in 2010. The oldest version may belong to the early years of the 10th century, when the large-scale translation work by Uighur Buddhists began, and a distinction should be made between two translations (Ligeti, 1971).

Other *Sūtras*

There are also extant Uighur translations of such *sūtras* as the *Kṣitigarbhasūtra* (*Sūtra* on [Bodhisattva] Kṣitigarbha ["Earth Store"]; Zieme, 1990) and the *Bhaiṣajyagurusūtra* (*Sūtra* on [Buddha] Bhaiṣajyaguru ["Medicine Master"]; Yusup, 2004).

Commentaries

Translations from Chinese treatises are also known. In the foregoing, the commentaries to the *Saddharmapuṇḍarīkasūtra* and the *Vimalakīrtinirdeśa* were mentioned, but many other published and unpublished fragments of commentaries exist (Özertural, 2012).

Some leaves of a manuscript in the Berlin Collection are identified as parts of an Uighur translation of the *Dasheng rudao cidi* (大乘入道次第; The Order of Entering the Way According to the Mahāyāna; Zieme, 2012b). The author of this text is Zhizhou (智周; 679–723 CE or 668–723 CE), a disciple of Huizhao (慧沼; 650–714 CE), a master of the lineage of the Dharmalakṣaṇa (Faxiang [法相]; Yogācāra) school in China.

Ritual Texts

Mention should be made of a Uighur translation of the Chinese *Cibei daochang chanfa* (慈悲道場懺法; Confession Ritual on the Platform of Mercy and Benevolence; T. 1909). It is a large work of ten volumes ordered by Liang Wudi (梁武帝; 464–549 CE) to absolve the sins of his evil wife. It was translated into Uighur by Küntsün Šäli tutuŋ from Bešbalık, who probably was a *nomdaš* (comrade in dharma) of the more famous Šıŋko Šäli Tutuŋ, who was also from Bešbalık. The work is known under the (shortened) Uighur title *Kšanti kılguluk nom* (*Sūtra* on How to Make Confession; Wilkens, 2007).

Biographies

The Uighur translation of the ten-volume biography of Xuanzang, written by Huili and his pupils, the *Datang daciensi sanzang fashi zhuan* (大唐大慈恩寺三藏法師傳; Biography of the Tripiṭaka Master of the [Monastery] Daciensi of the Great Tang; T. 2053), was undertaken by – or under the leadership of – Šıŋko Šäli Tutuŋ, who flourished around the early 11th century. The translation exists in several manuscripts, but only the largest one enables us to have an impression of old Uighur book culture, as only very few passages of all other manuscripts are preserved. A richly commentated reedition of the Uighur manuscript is currently being prepared (e.g. Aydemir, 2013).

Tantric Buddhism

Although the majority of Uighur tantric texts were translated from Tibetan during the Mongol period, some tantric works were translated earlier, presumably from Chinese, such as some *sūtras* from the Avalokiteśvara corpus. These translations also belong to the work of Šıŋko Šäli Tutuŋ. The majority of these fragments of several manuscripts can be ascribed to a translation of the aforementioned *Qianshou qianyan guanshiyin pusa guangda yuanman wuai da beixin tuoluoni jing*. There exists an Uighur edition in five volumes, since some leaves carry leaf numbers of the "fourth (volume)," which are translations of the *Padmacintāmaṇisūtra*. Since this work is also a separate *sūtra* in Chinese, the *Ruyi lun tuoluoni shenzhou jing* (如意輪陀羅尼神咒經; Talismanic Wheel *Dhāraṇīsūtra*; T. 1082), which was translated by Śikṣānanda (652–710 CE), one can assume that this *sūtra* was incorporated into this composite manuscript as a fourth volume. In this sense, it seems clear that Uighur Buddhists arranged some of their translations into composite editions (still unpublished).

An apocryphal *sūtra* of Chinese origin should also be mentioned here, the *Foding xin tuoluoni jing* (佛頂心陀羅尼經; *Dhāraṇīsūtra* of the Essence of the Buddhoṣṇīṣa), which derives from an earlier Song period work, the *Foding xin guanshiyin pusa da tuoluoni jing* (佛頂心觀世音菩薩大陀羅尼經; *Dhāraṇīsūtra* of Bodhisattva Guanshiyin [Avalokiteśvara], Essence of Buddhoṣṇīṣa). The Uighur version was rather widespread and popular among laypeople, because it demonstrates in exemplary stories from Indian and Chinese sources the effectiveness of the veneration of Avalokiteśvara, the bodhisattva of mercy (Kara & Zieme, 1986).

Shiwang jing

One work known only from Dunhuang and Turfan is the *Shiwang jing* (十王經; Scripture on the Ten Kings; Teiser, 1994). Like its Chinese forerunners, the Uighur fragments, although more fragmentarily preserved than the beautiful Dunhuang Chinese scrolls, can be grouped into a pure text version and an illuminated one. S.-C. Raschmann has published some results of joining fragments from Berlin and Saint Petersburg (Raschmann, 2012b).

The Uighur translation is faithful to the Chinese version, but some fragments have additional text portions, a fact relevant to S. Teiser's observation (Teiser, 1994, 95–101) that it is important to look at the question whether the *Shiwang jing* has been transmitted as a composite manuscript. So far, mainly because of the very fragmentary state of the Uighur manuscripts, we cannot say exactly whether there were such composite manuscripts among the Uighur material, but recently one fragment of a block-printed version has been discovered (U 4278). This points to the possibility that Uighur versions of the *Shiwang jing* circulated during the Yuan dynasty.

Chinese Texts Known Only from Dunhuang and Chan Buddhism

The dependence of Uighur Buddhism on Buddhist literature, which was flourishing in Dunhuang, has been established. The story of Kalyāṇaṃkara and Pāpaṃkara (the good and the bad prince) is a fine example. This manuscript from cave 17 (Hamilton, 1971) is a retelling of the Chinese *jātaka Da fangbian fo baoen jing* (大方便佛報恩經; Great Skillful-Means *Sūtra* on the Buddha's Repayment of Kindness; T. 156). This text is not a word-for-word translation, but it is also not a *bianwen* (變文; transformation text) as suggested earlier (Rong, 2001, 295–296). However, there is an Uighur rendering of the *bianwen* of Maudgalyāyana (Zieme, 2011a), and some other texts, such as a translation of the *Wutaishan zan* (五臺山贊; Praise of Wutai Mountain; Zieme, 2002) and of Chan poems on the Night Watches (五更轉頌; Zieme, 2007) or the 12 Hours (十二時; Zieme, 2012d), were edited (Zieme, 2012d).

Chan texts also circulated among the Uighurs. The *Yuanjue jing* (圓覺經; *Sūtra* of Complete Enlightenment; T. 843), widely used by Chan practitioners in China and beyond, was well known among Uighur Buddhists as can be judged from the numerous extant manuscripts and block prints (Zieme, 1982). In addition, there are at least two different manuscripts of one or two commentaries to this *sūtra* (Kudara, 1992). Of special interest is a version of the *Guanxinlun* (觀心論; Treatise on the Contemplation of the Mind; T. 2833; Yakup, 2010, 235).

Abhidharma

Abhidharma literature in Chinese was studied and translated by Uighur Buddhists (Shōgaito, 2008). The following Uighur Abhidharma texts are known:

- some leaves of the *Abhidharmakośabhāṣya*;
- rather large fragments of the *Abhidharmakośabhāṣyaṭīkātattvārthānāma*;
- one leaf of the *Abhidharmakośakārikā*;
- commentaries on the *Abhidharmakośakārikā*;
- commentaries on the *Abhidharmaprakaraṇa*; and
- some leaves of the *Abhidharmanyāyānusāra* (Shōgaito, 2014).

The Tibetan Tradition

The influence of Tibetan Buddhism among the Uighurs is evidenced in not only the translation of Tibetan texts but also the writing of Uighur texts in Tibetan script and the use of Tibetan glosses in Uighur manuscripts (Maue, 1996).

A large group of Uighur texts composed in the Yuan period (13th–14th cents.) belongs to the tantric Buddhism of the Tibetans and Mongols. These texts were mostly translated from Tibetan originals such as the *Guruyoga*, composed by Sa skya Paṇḍita. In other cases, the Uighur authors may have also used Sanskrit and Chinese versions. Among known works are fragments of an Uighur translation of the *Aparamitāyurjñānasūtra* (*Sūtra* of the [Buddha] of Infinite Life and Knowledge; an edition of this and other tantric texts is in preparation; see Yakup, 2012), the *Sitātapatradhāraṇī* (Röhrborn & Róna-Tas, 2004), the *Uṣṇīṣavijayādhāraṇī* (Müller, 1910, 27–50), a collection of some fragments from the *Pañcarakṣā* (Zieme, 2005a), and a Vajrasattva ritual (still unpublished). A large composite manuscript of translations or adoptions of some of Nāropa's scriptures known as the *Totenbuch* (Zieme & Kara, 1978) has been also studied also from the Indological side (Dietz, 2010–2011).

Only the first of the four parts of the manuscript is a reworking of the *Bar do thos grol* (Tibetan Book of the Dead). The second part, entitled Instruction of the Deep Teaching to Follow the Four Lines according to the Way, is related to Nāropa's tradition, but only the similar Tibetan text *Rim pa bzhi lam du slong ba* (Guide of the Four Lines) could be found so far. The third part is an incomplete description of Nāropa's teaching of the six dharmas, while the last part explains the six offerings to Cakrasaṃvara.

The Uighur translation of the opening text of some editions of the Tibetan and the Mongolian Kanjurs, the *Mañjuśrīnāmasaṃgīti*, is known from some different translations (Kara & Zieme, 1977).

A rather voluminous manuscript is the Uighur translation of the *Śrīcakrasaṃvaramaṇḍalābhisamaya*, a description of practicing the Śrīcakrasaṃvara *maṇḍala* (Kara & Zieme, 1976, text A).

Original Uighur Works

Poetic texts might be considered to be the best candidates for Uighur original works. This, however, is not always the case, as can be seen from the example of the *Samantabhadracaryāpraṇidhāna* (see above), which is based on a verse text preserved in Sanskrit, Chinese, Tibetan, and other languages. It was translated by the Uighur scholar and poet Anzang (13th cent.; Zieme, 1991, 310–312), again in verses, namely in the strophical alliteration system that was predominant in Uighur poetry. Moreover, he also composed other poems on similar topics based on prose sections of the *Buddhāvataṃsakasūtra* (Zieme, 1991, 127–175).

Among the manuscripts written in Brahmi and Uighur script, there are colophons and praises of other types. One peculiar manuscript contains *ślokas* composed in the Uighur way (with head rhyme) written in not only Brahmi script but also Sanskrit language. These stanzas are followed by a line-by-line rendering in Uighur prose (Laut & Zieme, 1990).

The problem of original Uighur texts in prose needs a special treatment. Apart from word-for-word translation, all Uighur translations have their specific traits. The *Insadisūtra* (Tezcan, 1974) is a composite manuscript. Its first part consists of a retelling – in a completely new style – of the story of the nun Sundarī, accused for her intention to kill the Buddha. Here we find a mixture of prose and alliterating verses and a treatise on the monastic *pravāraṇā* ceremony, when in India the rainy season ended and monks were gathering to commemorate Buddha's meditation and to confess sins, for which no exact parallel exists. But the author quotes from the *Dharmapada* as well as from Chinese commentaries (Zieme, 2006). The second part of the manuscript is an original Maitreya hymn using and elaborating passages of some Chinese texts (Zieme, 2013a).

Among the literary heritage of the Buddhist Uighurs, there is a large number of confession texts. Not only were the voluminous texts *Cibei daochang chanfa* (see above) and *Cibei daochang shuichan* (慈悲道場水懺; Confession [by Using] Water [to Clean Oneself from Sins] on the Platform of Mercy and Benevolence; T. 1910) translated but also probably others. What is really astonishing is the high number of manuscripts corresponding to T. 1909, while there is only a single manuscript corresponding to T. 1910. A large number of scrolls, *pustakas*, and also stitched booklets belonging to a *Kšanti kılmak nom*, mentioned above, are also extant. How was it possible that, besides the translation of repentance *sūtras*, a new text came into existence?

One may argue that at least one reason was the special religious situation during the 10th century. The Uighurs had introduced Manichaeism in their empire in the mid-8th century CE, and this continued when they moved into East Turkestan. It is important to recognize that in Manichaeism, for both the elect and the auditors, confession of sins was a great theme. Indeed, the famous Manichean text of confession, the *Xuāstvanīft*, was widespread in the Uighur realm (Clark, 2013). Thus, when the Uighur ruling elite decided toward the late 10th century to give up Manichaeism and to adopt Buddhism as their sole religion, they also had to create, among others, a standard work to serve the

institution of repentance for laypeople. The structure of the *Kšanti kılmak nom* is simple:

1. the bad influence of evil deeds, demonstrated by giving examples of famous kings like Aśoka, Menander, and Kaniṣka, who after converting to Buddhism all became pious Buddhists;
2. lists of sins; and
3. the danger of hell and the promise of meeting Maitreya while still on earth.

In addition to "negative confession" and "positive confession," J. Wilkens introduced the term "prophylactic confession," which is very appropriate to Central Asian Manichaean and Buddhist confession texts (Wilkens, 2003, 14).

Yet the Uighur interest in confession is not limited to texts such as the *Kšanti kılmak nom*. Rather, in colophons the transfer of merit is documented on a large scale, including to ghosts, members of nobility, and one's own family. All of these single scrolls, booklets in *pustaka* format, or stitched booklets were produced on personal request by laypeople who dedicated their effort and money to bring about a meritorious work. Unfortunately, it is not possible to tell anything about the use of these products.

Conclusion

Uighur Buddhism, as far as we know of it, is very fragmented and diverse. It follows different traditional lines, among which the predominant one is the Chinese tradition. The major schools known from Buddhisms in Dunhuang became influential among Uighurs in Turfan too. Nevertheless, it is not easy to give a definite answer to the question when and where a special school was widely accepted or followed. Only few names of translators are known, and in general, their activities may be due to some trends or to some hazardous selections. Efforts to elucidate these questions have already started but must be strengthened in the future together with the preparation of accurate editions and, if necessary, reeditions of the Uighur Buddhist texts.

PETER ZIEME

Local Literatures: Mongolia

The vast body of Buddhist literature in Mongolia can be classified into three general categories:

1. the Buddhist canonical literature translated into the Mongolian language;
2. the original Mongolian writings composed in the Middle and Classical Mongolian languages; and
3. the original Mongolian works composed in the Classical Tibetan language.

Some Mongolian authors wrote predominantly in the Tibetan language, others wrote equally in both Tibetan and Mongolian, and yet others wrote primarily in Mongolian. In terms of literary genres, the original Mongolian Buddhist writings include ritual texts, meditational manuals, liturgies and eulogies, didactic poetry, didactic stories, legends, biographies, prophetic literature, epics, plays, and a wide range of scholarly treatises on philosophy, logic, linguistics, poetics, history, medicine, veterinary, astronomy-cum-astrology, and law. A mere list of Mongolian Buddhist authors and their collected works occupies multivolume catalogues, and one cannot do justice to the wealth of Buddhist literature in Mongolia briefly.

The 14th Century: The Emergence of Buddhist Literature among the Mongols

The development of Buddhist literature among the Mongols began in the late 13th century. During the Yuan dynasty (1271–1368), under the patronage of Mongol emperors, Uighur, Mongolian, and Chinese Buddhist scholars came into contact for the first time, especially on account of the Mongol court sponsoring the preparation of several new Chinese Buddhist canons. But unlike the Uighur literary tradition, which drew on a vast array of literary sources, the Mongolian Buddhist literature largely derived from the Tibetan tradition. Thus when Kublai Khan (Qubilai Khan; r. 1260–1294) built the White Pagoda Temple in Daidu (present-day Beijing), the translation of Buddhist texts from Tibetan into Mongolian and Uighur had begun.

Among the early Mongolian translations, the most influential were Śāntideva's *Bodhicaryāvatāra* (Mong. *Bodhisaduva-nar-un yabudal-dur oroqui*), translated by the Sakya (Sa skya) scholar Choiji Odser (Chos kyi 'od ser) in 1305 (Cleaves, 1954). Twelve pages of the original translation were discovered in Turfan and published by F.C. Cleaves in 1954. A revision of Choiji Odser's translation was prepared by Urad Güüshi Bilig-ün dalai and printed in 1748. In 1311, Chosgi Odsir also wrote a commentary on the *Bodhicaryāvatāra*, which was published in a thousand copies in Daidu in 1312. Sakya Paṇḍita Kun dga' rgyal mtshan dpal bzang po's *Legs par bshad pa'i rin po che'i gter* (Treasury of Elegant Sayings; Mong. *Erdeni-yin sang*) was translated by Sonom Gara in the same century. During the first half of the 14th century, Mongolian translations of Buddhist texts from the Chinese language began to emerge. One such text was the *Doloyan ebügen neretü odun-u sudur* (*Sūtra* of the Big Dipper), translated by the Uighur scholar Alintemür in 1328 (Elverskog, 2008). Other texts were the *Laṅkāvatārasūtra* and the *Saptabuddhakanāmamahāyānsūtra*, translated by another Uighur translator, Biranaširi, who also translated the *Mahāparinirvāṇasūtra* from Sanskrit and the *Acintyasamādhisūtra* from Tibetan.

Early translators also composed their own works. Choiji Odser wrote in Tibetan the *Mdzad pa bcu gnyis 'grel* (Twelve Deeds of the Buddha), based on the *Lalitavistara*, and it was later translated many times into Mongolian (Poppe, 1967). As an adherent of the Sakya school of Tibetan Buddhism, Choiji Odser also composed *Makhagaliin Magtaal* (The Hymn to the Four-armed Mahākālī, the female protective deity of the Sakya order). Both of his texts were translated into Mongolian by his disciple Sherab Sengge (Shes rab seng ge), who also translated the Uighur version of the *Pañcarakṣā* into Mongolian (Aalto, 1950), the *Suvarṇabhāsottamasūtra* (Aalto, 1954) in 1328 and the *Mañjuśrīnāmasaṃgīti*, which was also prepared in a quadrilingual version during the Ming dynasty (Vira, 1961). These 14th-century works inspired the later, more systematized translations of Buddhist literature into Mongolian and a proliferation of Buddhist literary culture among the Mongols, especially

from the 17th to the 19th century, when many excellent translators and authors emerged.

The 17th to 20th Centuries: A Proliferation of Buddhist Literature among the Mongolian Peoples

The Kanjur (Mong. *ganjuur*; Tib. *bka' 'gyur*) and Tanjur (Mong. *danjuur*; Tib. *bstan 'gyur*)

Following the decline of Buddhism in the 15th and 16th centuries, Altan Khan (1508–1582) of the Tumeds, having converted to Buddhism, patronized the learned Mongolian translators in his capital of Hohhot. In 1587, for the sake of a correct pronunciation of Sanskrit mantras and *dhāraṇī*s, Ayushi Güüshi introduced a special set of letters for the proper transcription of Sanskrit and Tibetan letters into the Uighur-Mongolian script. A Mongolian translation of the Tibetan Kanjur was completed in 1607 under the patronage of Namudai Sechen Khan, a grandson of Altan Khan, but surviving copies of that translation have not been found.

In 1628–1629, Ligdan Khan of the Chakhars (1604–1637) commissioned a translation of the complete Kanjur, appointing Paṇḍita Gunga Odser (Kun dga' 'od zer), artisan lama Samdan Sengge (Bsam gtan seng ge), Günding Güüshi, and others to head a team of 35 translators who would assemble the existing translations and prepare new translations of the missing texts. The final, manuscript copy, comprising 113 volumes, was completed in 1629. Artistic scribes from the Shiregetü Monastery copied the manuscript in gold letters on beryl-colored paper. This copy is known as the Altan *ganjuur* (Golden *ganjuur*) and was worshipped by Ligdan Khan for the protection of the state. Although it was initially kept in Inner Mongolia, after the Manchu conquest, it was brought to their original capital of Mukden (present-day Shenyang) and kept in the famous imperial Mahākāla Temple during the Qing dynasty. It was partially destroyed by the Guomindang army in the early 20th century, along with the statue of Mahākāla commissioned by the Tibetan 'Phags pa Bla ma (1235–1280), who served as a religious preceptor on Kublai Khan's court. Only 20 of its volumes have been preserved and are now housed in the Library of the Academy of Social Sciences in Hohhot (Bulaɣ, vol. II, 2003, 673). According to oral tradition, another five, unembellished copies of the same *ganjuur* were also produced. A catalogue of the manuscript edition was prepared by the Russian Mongolist Z.K. Kasyanenko and published in 1993.

Nearly a century later, in 1717, the Qing emperor Kangxi (r. 1662–1722) issued an order decreeing that Ligdan Khan's copy of the *ganjuur* was to be edited by a team of the Inner Mongolian lamas in Beijing. It was completed and then printed in 1720. According to an 18th-century Mongolian history, the *Altan Erike* (Golden Rosary), this *ganjuur* was prepared by leading translators from the Dolon-nuur Monastery, including Shiregetü Noyan Choiji, Da Lama Ganjurwa Chültim (Tib. Tshul khrims), and others, who edited and organized the *ganjuur* in conformity with the Tibetan Kanjur (Dalantain, 1997, 23). The Hungarian Mongolist L. Ligeti prepared a catalogue of the xylographic edition in 1942. Nevertheless, the manuscript and xylographic edition differ in the order in which sections are arranged. A sequence of the ten sections of the manuscript copy is as follows: *tantra*, Prajñāpāramitā, *Pañcaviṃśatisāhasrikāprajñāpāramitā* (The 25-Thousand-Line *Prajñāpāramitā*), *Aṣṭadaśasahāprajñāpāramitā* (The 18-Thousand-Line *Prajñāpāramitā*), *Śatasāhasrikāprajñāpāramitā* (The One-Hundred-Thousand-Line *Prajñāpāramitā*), versified Prajñāpāramitās, *Avataṃsaka*, *Ratnakūṭa*, Vinaya, and *sūtra*. In the xylographic edition of the *ganjuur*, the 108 volumes containing 1,161 works are divided into six sections: *tantra* (vols. I–XXV), Prajñāpāramitā (vols. XXVI–XLVII), *Ratnakūṭa* (vols. XLVIII–LIII), *Avataṃsaka* (vols. LIV–LIX), *sūtra* (vols. LX–XCII), and Vinaya (vols. XCIII–CVIII). Other differences between the two are found in the arrangement of some Mahāyāna *sūtra*s and in some colophons that are found in the manuscript but absent from the block-printed edition.

Compilation and translation of the entire Mongolian *danjuur* began in 1741 under the patronage of the Qing emperor Qianlong (r. 1736–1796) and were completed in 1749. The work of translation was carried out by a team of learned Mongolian high lamas and Tibetan scholars specializing in different disciplines of Buddhist knowledge and recruited from Mongolia, Tibet, and China. They were headed by the Second Jangjiya Khutugtu Rolbi Dorji (Lcang skya ho thog thu Rol pa'i rdo rje; also known as Ye shes bstan pa'i sgron me; 1717–1786), the second in the line of incarnate lamas who oversaw Mongolian Buddhism during the Qing dynasty, and by Galdan Shiregetü Lubsang Dambi Nima (Dga' ldan shi re thu Blo bzang bstan pa'i nyi ma; 1689–1762), who together with their team first produced a terminological dictionary, *Merged γarqu-yin oron ner*

roduced a terminological dictionary, *Merged yarqu-yin oron neretü toγtaγaγsan dayyig* (The Source of the Wise), in 1741–1742, for the sake of standardizing their translations of Buddhist terms. According to the order of the Qianlong emperor's predecessor, Yongzheng (who issued a printed edition of the Tibetan Tanjur in 1724), the works of Indian Buddhist masters were supplemented by the writings of Mongolian and Tibetan authors. The emperor Yongzheng's decree to the Tibetan Tanjur was therefore translated into Mongolian and included in the introduction to the last volume of the cinnabar copy of the Mongolian *danjuur*, which was printed in Beijing in 1749 and became popularly known as the Beijing Red-Ink Mongolian Edition of the *danjuur*. It states that by the order of the emperor Yongzheng, seven volumes authored by the First Jangjiya Khutugtu Agwang Lubsang Choindan (Ngag dbang Blo bzang Chos ldan; 1642–1715), who was a nominal, ruling head lama (Mong. Jasag da blama) of all Mongolian monasteries during the Qing dynasty and a state preceptor of the Kangxi emperor, and the collected works of Tsong kha pa should be included into the wood blocks of the Mongolian *danjuur*. Nevertheless, a later printing of this *danjuur* no longer contained the information regarding the emperor's commission of the translation, but the preface of To Vang's (1797–1887) syllabary, the *Oyun bilig-ün soyurqal* (Wisdom's Kindness), mentions the emperor's commission of the *danjuur* and his request that 20 volumes of Tsong kha pa's collected works and seven volumes of the First Jangjiya Khutugtu be translated and included in the *danjuur*. Regardless, the *danjuur* was initially printed in Beijing in 1749 in red ink. It comprises 226 volumes, consisting of 1,800,000 pages, including a volume with the table of contents, and it contains 3,458 texts. Under the auspices of the Eighth Jebdzundamba Khutugtu (Tib. Ngag dbang Blo bzang Chos rje Nyi ma Bstan 'dzin Dbang phyug Rje btsun dam pa; 1870–1924), the last theocratic emperor of Mongolia, known also as Bogdo Khan, the *danjuur* was reprinted in 1908–1910. It is now housed in the State Central Library in Ulaanbaatar.

Since a standardized Buddhist terminology in the Mongolian language was nonexistent prior to the compilation of the Mongolian *danjuur*, the Tibetan-Mongolian Buddhist terminological dictionary *Merged yarqu-yin oron neretü toγtaγaγsan dayyig* (Tib. *Dag yig mkhas pa' 'byung gnas*) was drafted in 1741–1742 by Rolbi Dorji and edited by Abaga Dai Güng Agwang Dampil (Ngag dbang Bstan' phel). In turn, the *danjuur* was translated by a team of 40 Inner Mongolian translators and Tibetan Buddhist scholars, who on the basis of this dictionary – and the theory of translation given in its preface – revised a number of older translations in the process of the compilation of the *danjuur*. Moreover, the texts in the *danjuur* were classified into ten main categories in accordance with the traditional Indian Buddhist classification of the five major and five minor fields of Buddhist knowledge (Skt. *pañcavidyāsthāna*) – the former being namely linguistics (*śabdavidyā*), logic (*hetuvidyā*), inner science (*adhyātmavidyā*) or Buddhism proper, medicine (*cikitsāvidyā*), and creative arts (*śilpavidyā*). These texts had a profound influence on Mongolian Buddhist scholasticism and on the proliferation of Mongolian Buddhist literature, facilitating innovations in the Mongolian literary language and its norms and enhancing the Mongols' literary creativity.

During the 18th and 19th centuries, the Mongolian literary language remained strong, and some Mongolian authors insisted on writing in Mongolian. Nevertheless, Tibetan became the dominant language among Mongolian Buddhists (Elverskog, 2006). Its prevalence continued into the early 20th century, as evidenced in the works of the prominent Mongolian authors of that period – Shadub Dandar (Bshad sgrub bstan dar; 1835–1919), Chagdurjab (Phyag rdor skyabs; 1869–1933), Lubsang Damdin (Blo bzang rta mgrin; also known as Zava Damdin; 1867–1937), and many others. Despite the fact that numerous Mongolian works were composed in Tibetan, the history of Buddhist literature in Mongolia reveals a process of developing and redefining Mongolian Buddhist cultural identity.

Commentarial Literature and Works on Buddhist Philosophy

The Mongolian scholars' familiarity with the Indian sources contained in the *ganjuur* and *danjuur* and their knowledge of the Tibetan Buddhist literature, which they encountered through their close ties with Tibetan monastic institutions, resulted in an extensive body of commentarial literature, which can be classified into the following categories:

1. commentaries on the Mahāyāna *sūtras* and *tantras*;
2. commentaries on Indian *śāstras* dealing with a wide range of topics; and
3. commentaries on Tibetan scholastic and popular sources.

Among the Indian texts that received the most attention from commentators are the *Vajracchedikāprajñāpāramitāsūtra* and the *Suvarṇabhāsottamasūtra*, the cycles of Hayagriva and Yamāntaka *tantras*, and

Śāntideva's *Bodhicaryāvatāra*. Sakya Paṇḍita's *Legs par bshad pa'i rin po che'i gter*, Tsong kha pa's *Lam rim chen mo*, and others have also drawn the attention of many commentators.

One of the most prominent authors on Buddhist philosophy was Chakhar Gebshi Lubsang Chültim (Cha har dge bshes Blo bzang tshul khrims; 1740–1810), who authored ten volumes of collected works, comprising 215 texts of different genres and dealing with various topics on Buddhist philosophy and other subjects. Other important authors of this genre are Bichigechi Choiji Agwang Tsering (Pi chi ye chi chos rje Ngag dbang tse ring; 18th–19th cents.); Dagri Damchig Dorji (Brag ri Dam tsig rdo rje; 1781–1855), among whose influential works are the *Dpal ldan dbu ma thal 'gyur ba'i grub mtha'i rnam bzhag thar lam kun gsal* (Complete Illumination of the Path of Liberation: A Presentation of the Tenets of the Glorious Prāsaṅgika Madhyamaka) and the *Snod bcud kyi rnam bzhags rin chen sgron me'i zur 'debs legs lam kun gsal* (Complete Illumination of the Good Path); Damchig Dorji (1781–1848), who was a prolific author and teacher of the Fifth Jebdzundamba (Lubsang Chültim Jigmid Blo bzang tshul khrim' 'jigs-med; 1815–1845), the lineage of incarnate lamas deriving from the Tibetan Jonang hierach, rJe btsun Taranatha (1575–1634); Choiji Agwang Baldan (Chos rje Ngag dbang dpal ldan; 1797–1864), who also composed the famous, versified praises to the awakening mind (*bodhicitta*) and to the Madhyamaka view; Zaya Bandida Lubsang Perlei (Blo bzang 'phrin las; 1642–1716); Alashan Lharamba Agwang Dandar (Lha rams pa Ngag dbang bstan dar; 1759–1840); and many others. Twenty-one Mongolian authors wrote on Dharmakīrti's *Pramāṇavārttika*, authoring more than 60 commentaries on it. Among those who wrote commentaries on Dignāga's *Hetucakra*, the best known are Dandar Lharamba (Bstan dar Lha rams pa; 1757–1840) and Lobon Lama Sodnam Jamtsu (Slob dpon Bla ma Bsod nams rgya mtsho), who also wrote expositions on the *Pramāṇavārttika*.

Historical Writings

A development of Buddhist historical literature in Mongolia took place with the reemergence of the early Mongolian historical traditions due to the growing influence of the Indian and Tibetan historical and hagiographical literature among the literary Mongols. The influence of Tibetan historiography is evidenced in the development of different genres of Buddhist historical works such as the history of Buddhism (Tib. *chos 'byung*), historical annals (Tib. *lo 'byung*), oral historical traditions (Tib. *gtam rgyud*), biographies (Tib. *rnam thar*), and chronologies (Tib. *bstan rtsis*).

One of the earliest surviving histories dates from the late 16th century and is written in literary Mongolian, the *Arban buyantu nom-un chayan teüke* (White History of the Dharma with the Ten Virtues), commonly known as the *White History* and attributed to Kublai Khan (1260–1294; Sagaster, 1976). It was discovered in southeastern Mongolia, revised, edited, and circulated by the Khutugtu Sechen Khung Taiji (1540–1586), who initiated the second conversion to Buddhism in the southwestern part of Inner Mongolia and was responsible for the second conversion of the Ordos Mongols to Buddhism. It gives the account of the system of two laws, the law of dharma and the law of state, as an ideal model of Buddhist governance that was observed in Buddhist countries and reinforced by Kublai Khan. It also lays out the ways in which this ideal way of governance can be achieved by assigning the titles and duties of monks and government officials and by prescribing the rewards for their achievements and punishments for their failures. The idea of the three Buddhist monarchies – India, Tibet, and Mongolia – seen in many Mongolian histories of Buddhism was first formulated in this work. In C.P. Atwood's view, the *Arban buyantu nom-un čayan teüke* is "likely a sixteenth century utopia, retrojected to Qubilai's time, envisioning Buddhist reunification of Mongolia around the Eight White Yurts" (Atwood, 2004, 82).

Another early historical work, composed in Mongolian verse, is the *Erdeni tunumal neretü sudur* (Jewel Translucent *Sūtra*), written in 1607 by an anonymous author but traditionally considered a writing of Altan Khan's adopted son Dayun Kiya. At the center of this history, in which the author's literary talent and Buddhist affiliation are well expressed, stands Altan Khan. It tells of his military adventures and conquests of Chinese lords in about 40 battles, which were followed by his conversion to Buddhism and a meeting with the Tibetan lama Bsod nams Rgya mtsho (1543–1588), on whom Altan Khan conferred the title of Dalai Lama and from whom in return he received the title of *Qotala Esrua Yeke Küčün-tü Cakravarti Nom-un Qayan* (All-Brahmā, Great and Powerful, *Cakravartin* of the Dharma). It also tells of Altan Khan's annihilation of the "mad and stupid shamans" and "humiliation of shamanesses" (Elverskog, 2003, 159). It invents Altan Khan's genealogical connection to Genghis Khan (Chinggis Khan) and presents him as a bodhisattva khan, destined to spread the dharma among the Mongols.

Among the historical writings
Mongolian and utilizing a genealogic
ogy, the most popular was the chroni
tobči (Precious Summary), written in 1
Sechen, which begins with the origi

Among the historical writings composed in Mongolian and utilizing a genealogical methodology, the most popular was the chronicle *Erdeni-yin tobči* (Precious Summary), written in 1662 by Sagang Sechen, which begins with the origin and formation of the world and the appearance of the first sentient beings. It gives an account of the history of the Mongols up to the Qing conquests and lauds the achievements of the Khutugtu Sechen Khung Taiji, who catalyzed the conversion of Ordos Mongols to Buddhism.

The *Altan tobči* (Golden Summary), composed in Mongolian by the Third Mergen Gegen, Lubsang Dambijaltsan (Blo-bzang btsan-pa'i rgyal-mtshan; 1717–1766), who belonged to the line of incarnate lamas of Inner Mongolia who promoted the usage of Mongolian language in Buddhist practices instead of Tibetan, is a history of Buddhism in India, Tibet, and Mongolia. It chronicles a lineage of local nobles, particularly a genealogy of the Khasarid lineage, linking it to Neichi Toin's tradition of Mongolian Buddhism. Rashipungsug's *Bolor erike* (Crystal Rosary), written between 1774 and 1775, discusses the origin of the Mongols and traces the genealogy of Mongol khans to the legendary Indian and Tibetan Buddhist figures. Referencing certain Chinese historical sources, it criticizes Confucians' denigration of Buddhism and Chinese bias toward the Mongols. Jambadorj's *Bolor toli* (Crystal Mirror), written between 1834 and 1837, which also references a variety of sources, deals with the spread of Buddhist teachings in India, China, Tibet, and Mongolia. Other Mongolian-language-based chronicles that touch on the history of Buddhism in Mongolia to various degrees are the *Altan Kürdün Mingyan Kegesütü* (Golden Wheel with a Thousand Spokes), written by Dharma Güüshi, *Erdeni-yin erike kemekü teüke bolai* (Precious Rosary), composed by Galdan in the 19th century, which pays special attention to the state of Buddhism in Outer (Khalkha) Mongolia during the Qing period, and a short work titled *Erdeni-yin Erike* (Jewel Rosary), which describes the spread of Buddhism to Mongolia from China and Tibet through the development of monasteries and the like and was written by Ishibaldan (Ye shes dpal ldan) in 1835.

In addition to the above histories, Mongolian Buddhist scholars wrote on the history of Buddhism in Mongolia in Tibetan. Among the most prominent histories of Buddhism is the *Gsal ba'i me long* (Clear Mirror), written in four volumes between 1698 and 1702 by the famous Khalkha scholar Zaya Bandida Lubsang Perlei, who left an impressive literary corpus dealing with a wide range of Buddhist topics. To the same category belong the *Dpag bsam ljon bZang* (or *'Phags yul rgya ngag chen po bod dang sog yul du dam pa'i chos 'byung tshul dpag bsam ljon bzang*; The History of the Sacred Teaching in India, Great China, Tibet, and Mongolia), composed by the great polymath, the Upper Mongol Sumpa Gampo Ishibaljur (Sum pa Mkhan po Ye shes Dpal 'byor; see Das, 1908), the *Chen po hor gyi yul du dam pa'i chos ji ltar dar ba'i tshul gsal bar brjod pa pad ma dkar po'i phren ba* (Clear Account of How the Noble Teaching Was Disseminated in the Great Land of Mongolia, Called the Rosary of White Lotuses), composed in 1889 by the Inner Mongolian scholar Darmatāla, also known as Dam chos rgya mtsho (Klafkowski, 1987), the *Chen po hor gyi yul du dam pa'i chos ji ltar byung ba'i tshul bshad pa rgyal ba'i bstan pa rin po che gsal bar byed pa'i sgron me* (A Lamp That Illuminates the Precious Teachings of the Jina: A History of the Sublime Dharma in the Great Region of Hor), authored in 1819 by the Inner Mongolian erudite Tsembel Güüshi (also known as sGeg pa'i Blo gros 'jigs med Rig pa'i rdo rje), Zava Damdin's (Blo bzang rta mgrin) *Ser gi deb ther* (Golden Book), the *Rgya nag chos 'byung* (History of Buddhism in China), composed by the famous 18th-century scholar Gombojab (Mgon po skyabs; *fl.* 1725–1750) in 1736, and so on.

Mongolian authors also left a large body of biographical and autobiographical literature in the Tibetan language. In addition to biographies and hagiographies of the great Mongolian Buddhist figures, we find biographies of Indian and Tibetan figures. There is more than one biography of Tsong kha pa, who has been revered by Mongolian followers of the Dge lugs pa school as the second buddha. One such biography is the *Rje thams cad mkhyen pa tsong kha pa chen po'i rnam thar go slo bar brjod pa bde legs kun 'bying gnas* (The Easily Understandable Exposition of the Life of the Omniscient, Great Holiness, Tsong kha pa, Called the Source of All Blessings), written by the prolific writer and translator Chakhar Gebshi Lubsang Chültim (Cha har dge bshes Blo bzang tshul khrims) in 1802, after he completed the Mongolian-language-based biography of Tsong kha pa in 1786–1790, titled *Boyda Tsongkhapa-yin gegen-ü yeke namtar sayin amuyalang bükün-ü a yarqu-yin oron* (The Field from Which Good Tranquility Emerges: An Extensive Biography of the Brightness of the Holy Tsong kha pa). Worth mentioning is also the biography of the renowned Neichi Toin, the *Čindamani-yin erike* (Jewel Rosary), composed in 1739 by Bilig-ün dalai (also known as Prajñāsāgara).

Liturgies and Devotional Poetry

While in many Mongolian monasteries liturgical services were carried out in Tibetan, some religious personages insisted on the use of Mongolian when performing rituals. One such figure was the previously mentioned Third Mergen Gegen (1717–1766), an incarnate lama from eastern Inner Mongolia of the Urad banner, or clan, who initiated liturgical services in Mongolian (Humphrey & Ujeed, 2013). He systematized liturgical texts, including his new translations of the Tibetan liturgies that he compiled, his adaptations of those liturgies to the rhythm of Mongolian chants, and the liturgical texts that he composed. In order to make Buddhism genuinely Mongolian and more accessible to society at large, he insisted on the Mongolian-language-based liturgies in all monastic services and in other religious practices as well. Equalizing the number of syllables in all the lines of a verse, he created the unique "Mergen Gegen style" of Mongolian poetry, which shows patterns of "strict isosyllabic prosody" with even rhymes (Atwood, 2004, 147). In addition to the liturgies inherited from Tibet, Mergen Gegen also wrote liturgies for the lay practices of worshiping fire, Mongolian deities, and local mountains. Some eight liturgical texts comprise the first set of his collected works, titled *Öljei badaraɣsan süm-e-dür včir dhara Mergen Diyanči Blama-yin gegen-ber ɣol-un aman-u ungshilɣ-a bolɣan toɣtaɣaɣsan nom-un yabudal mashi todorqai gegen oyutan-u qoɣulai-yin čimeg čindamani-yin erike* (A Rosary of the Wish-fulfilling Gems, The Ornament of Throat of the Bright-Minded People, A Very Clear Liturgical Manual Designed for the Services of the Öljei Badaragsan Süm-e by Vajradhara Mergen Diyanchi Lama-yin Gegegen), which was printed in Beijing in 1774. Mergen Gegen also composed the *Nayan nigen ekhitü shilüg daguu khemekhü orushibai* (Eighty-One Songs) of devotional poems, didactic poetry that inspired other Mongolian poetic writings, textbooks with popular Buddhist teachings for laity, prayer books, eulogies, ritual texts for incense offering, confessional readings, readings for offerings and ablutions, prayers for averting inimical forces, ritual texts of beckoning prosperity, and other miscellaneous readings and prayers. These are found in the four volumes of the second section of his collected works, called the *Včir dhara Mergen Diyanči Blama-yin gegen-ü 'bum jarliɣ* (Collected Works of the Reincarnation of Vajradhara Mergen Diyanchi Lama), which altogether contain 138 texts and were first published in Beijing in 1783 (Ujeed, 2009, 116–121). The popularity of Mergen Gegen's collected works extended beyond the regions of Inner Mongolia to Khalkha Mongolia, and Mergen Gegen's poetry had a significant influence on Mongolian folk literature and songs.

Another religious figure, whose more than five hundred devotional and didactic poems, lyrical *sādhanas*, songs, and plays had a profound influence on popular Buddhist culture, was Danzanravjaa (Bstan 'dzin rab rgyas; 1803–1856), the Gobi-yin Noyon Khutugtu ("Fifth Lordly Incarnation of the Gobi"), a prominent writer and music composer born in the line of the Mongolian incarnate lamas associated with the Bka' brgyud-rNying ma school of Buddhism that was practiced in the Gobi region. Danzanravjaa's didactic poetry can be divided into two main categories: the poems that encapsulate the essence of Buddhist teachings and ethics and those that express his social and political criticism and scorn of institutionalized religion. In his short poem called the *Qormusta Tngri* (God Indra), which he composed in his childhood, Danzanravjaa emphasizes the meaninglessness of all conventional and social classifications in light of the inevitable impermanence and death that everyone faces. His two conversational poems, *Ɣaluu Kümün qoyor* (The Goose and the Man) and *Ebügen sibaɣu* (The Old Man and the Birds), express the view of impermanence, karma, rebirth, and call to buddhahood. In his poem *Ičegekü ičegekü* (Shame, Shame), the poet disparages a moral duplicity to which all the members of society may succumb. Among his devotional lyrics, those that abound in the erotic imagery and sentiments, filial love, and the affection for natural environment have been widely disseminated as popular songs. One such song is his most celebrated poem, the *Ülemji-yin činar* (Extraordinary Qualities), which simultaneously expresses the author's sensual rapture of his lover and his offering of the five senses to a deity.

Being inspired by Tibetan-style Buddhist opera, in 1830 Danzanravjaa wrote his first play, *Saran Kököge-yin namtar* (The Tale of the Moon Cuckoo), for which he also composed music and built a three-story theater near his Khamaar Monastery in the Gobi. The melodrama was also staged in Tulgat, in the three monasteries of Galbin Gobi district (modern Omnovgovi), and in other places. The play is an adaptation of the poetical and didactic novel authored by the Tibetan writer Blo bzan bstan pa'i rgyal mtshan in 1737 and translated into Mongolian by Agwang Dampil (Ngag dbang bstan 'phel) in 1770. It was written in Mongolian with some parts sung in Tibetan; in Danzanravjaa's adaptation, religious

It was performed in the Gobi until 1920 and then reintroduced on stage in Ulaanbaatar after the collapse of Communism. Danzanravjaa also authored tantric ritual texts, religious prayers, and liturgies in Mongolian and Tibetan, some of which are still performed today.

The Popular Genre

The popular genre of Buddhist literature that became widespread among the Mongolian peoples consisted of works belonging to two main categories: those translated into Mongolian during the 17th and 18th centuries and the original writings composed in Mongolian and Tibetan.

Among the popular, translated texts of this genre is the *Üliger-ün dalai* (Ocean of Stories; also known as the *Damamūkanidānasūtra* (Tib. *Mdo mdzangs blun*; *Sūtra* of the Wise and Foolish). It was first translated from Tibetan in 1586 by Shiregetü Güüshi Choiji from a version consisting of 52 *Jātakas*. It was preserved under the title *Siluγun onol-tu sudur* (*Sūtra* of the Simple and the Experienced) and was consecutively reprinted in woodblocks in 1714 and 1728. As the most popular version, it made its way into the Mongolian *ganjuur* under the changed title *Üliger-ün dalai* (The Ocean of Stories; Frye, 1981). Around the same time, the Inner Mongolian scholar Toin Güüshi prepared another translation of the same text. In 1655, Zaya Pandita Namkhai Jamtsu (Nam mkha'i rgya mtsho), who translated some 70 works by himself and another 200 in collaboration with his disciples, also translated a Tibetan version with 51 *jātaka* stories, recording it in the Oirat Clear Script under the title *Medeetei medee-ügei-gi ilγaγči kemekü sudur* (*Sūtra* That Distinguishes the Wise and Foolish). The third independent translation was prepared in the first part of the 17th century under the title *Sayin maγu üile-yin ači üreyi uqaγulqui neretü sudur* (*Sūtra* Called "An Explanation of the Results of Good and Bad Deeds") by Darkhan Manjusiri Chültim Lodoi (Tib. Tshul khrims blo gros) at the request of the Kharachin noble, Sechen Chögükür Taiji.

Another work of the popular genre of Indian originals in Mongolian adaptation was the Tale of Zombies, a popular collection of *vetāla* stories from India, the *Vetālapañcaviṃśati*, which was first translated by the famous Mongolian translator Güüsh Tsorj (16th–17th cents.) and was popular in Mongolia under the title *Ülgeriin Dalai* (The Ocean of Stories). Among the popular genre of works of Tibetan origin worth noting are the *Myalin Duulal* (Songs of Milarepa [Mi la ras pa]), translated for the first time in 1618 by the aforementioned Güüsh Tsorj, and the Mongolian adaptation of the Gesar epic, which was published in woodblock prints in Beijing in 1716 and which stands as a principle prose version of the Mongolian *Geser* among various versions of the Gesar epic produced in Mongolian language. It consists of nine chapters written in prose containing sporadic versified passages, whereas manuscript versions that contain up to six other sections are similar but not identical to any Tibetan version. In contrast, the *Ling Geser* version corresponds directly to the Tibetan Gesar of Ling narrative. Different prose and poetic versions of the *Geser* tale, reworked by the epic poets of the Oirat and Buryat origin, became the basis for the bards' singing. In some versions of the Mongolian *Geser* epic, Geser is an emanation of the god Indra, bound to annihilate the enemy of dharma; in other versions, he is Vaiśravaṇa, the lord of wealth; in the *Nomči Qatun Geser* story, he teaches the Dalai Lama in a visionary experience on the manner of accruing merit; in other versions, his life story resembles that of the Buddha Śākyamuni, while in Buryat versions, titled *Abai Geser* (Worthy Geser), he is entirely removed from the Buddhist context (Damdinsüren, 1957).

The didactic narrative of filial devotion illustrated by Maudgalyāyana, who traveled to different hells in search of his mother and rescued her from the tortures of hell, which was popular in China and Tibet, has been commonly known among Mongolian peoples as the *Molon Toyin-i Sudur* (*Sūtra* of the Monk Molon). It circulated in different versified and prose versions under different titles. It was publicly recited for illiterate people until the founding of the Mongolian People's Revolutionary Republic in 1924. Since the early 19th century, the story has been also widely circulated in illustrated picture books. The colophons and internal textual evidence suggest that this story already circulated among the Mongols prior to the appearance of its Mongolian translation from Tibetan. In the 17th-century translation by Altangerel Ubashi, the angels of death mention the queen Molon's killing of pigs and ducks for food, the kinds of meat that traditionally have not been a part of the Tibetan and Mongolian diet, pointing to Chinese influence on the story. Likewise, it has been suggested that the name Molon has its origin in the Chinese name Mulien (Heissig, 1972, vol. I). In Shiregetü Güüshi Chorji's translation, consisting of five chapters and printed in Beijing in 1708, after

Molon Toyin reports to the lord of death his intent of repaying the kindness to his mother by rescuing her from hell, he is instructed that only the compassionate Avalokiteśvara, mentioned under the name Āryabala, who dwells on the mountain Potala in the southern direction of Jambudvīpa is able to rescue her. Written translations from Chinese and Tibetan and the illustrated Mongolian adaptations of the text became widespread, and they formed the basis for the popular, oral versions of the story. The oral versions describe the events and sinful acts in the life of his mother, the queen Molon in more detail and exhibit Mongolian cultural elements (Dalantain, 1997, 254–267).

Other texts belonging to the category of popular genre that circulated among the populace were tales imbued by folk elements that spoke of the adventures and great deeds of Buddhist deities such as Vajrapāṇi and Sitātapatrā. Among many popular legends, various versions of the *Mungqaɣ-yi qarangɣui-yi geigülügči bilig-ün zula* (The Lamp of Wisdom That Illuminates the Darkness of Ignorance), popularly known as the *Čoyijod Dagini-yin Tügüji* (Tale of Choijid Dakini), a didactic story about hell, virtue, sin, and future life told through a 37-year-old woman's encounter with Lord Yama in hell, were also widely disseminated, and the *Gochin khoyer modon khünii ülger* (The Thirty-two Wooden Men), a hagiography of the Indian king Vikramāditya, which was brought to Mongolia from India by a certain Paṇḍita Bhagarāja. Its first translation into Mongolian was produced in 1686.

Local Literatures: Mainland Southeast Asia

The literatures of what are today the Theravāda countries of mainland Southeast Asia – Burma, Cambodia, Laos, and Thailand – are intimately connected to the development of Buddhism in the region. The earliest examples of written texts in the vernacular languages of Southeast Asia are generally associated in some way with Buddhism, for they often mention Buddhist concepts, were inscribed at Buddhist temples, or were written by Buddhist monks. Like Buddhism itself, the art of writing came from the Indic world, most probably from a Southern Brahmi script of the first half of the 1st millennium that was adapted in various places in order to write languages such as Mon, Khmer, Burmese, Pyu, and, much later, Thai (Griffiths, 2014). Much of the early literature was no doubt transmitted orally, and thus it should be assumed that there were a number of great works that have been lost in the course of time because they were not preserved in writing. The earliest examples of writing in mainland Southeast Asia stem from the mid-1st millennium in such locations as the Mon polity of Dvāravatī in central Thailand (dated paleographically to the 6th cent.; see Brown, 1996, 54–55), the Pyu center of Śrī Kṣetra (near present-day Pyay) in Burma (5th cent.; see Stargardt, 1990, 290), and the Khmer region of Funan (for Vo Canh Sanskrit inscriptions from the 3rd cent. found near present-day Nha Trang in Vietnam, see Coedès 1968, 17; for Khmer Inscription from Angkor Borei dated to 611 CE, see Herbert & Milner, 1989, 52). Indian literary styles and motifs were absorbed to a great extent by the people of Southeast Asia, and they were adopted and adapted to fit the local idiom, working their way into existing indigenous cultural formations.

Sanskrit, Pali, and local vernaculars (Pyu, Cam, Mon, and Khmer) were used to write Buddhist inscriptions from the 1st millennium onward in mainland Southeast Asia. In the first centuries of the 2nd millennium, a process of vernacularization began, as the literati of the region started to use the spoken local languages more often for literary purposes. For example in Sukhothai in the 14th century, Thai was employed to write on stone about a wide variety of topics from promulgating laws, through making alliances, to expounding the greatness of the king (Griswold & Prasert, 1992). It is from this period that the development of a truly vernacular literature in Southeast Asia begins, a literature that is replete with Buddhist stories, imagery, and references to merit and the cycle of *kamma*. Even writings on topics that are found across Asia outside of Buddhist literature, such as the worship of spirits of the ancestors, medical issues, war, childbirth, fortune telling, astrology, and legends of heroes who protect the people and save heroines from some evil fate, often bear many similarities to stories of this nature that are found in the narrative portions of the Pali canonical literature.

The earliest vernacular corpus in the two languages that were to host the largest amount and variety of Buddhist literature – Burmese and Thai – developed in the first few centuries of the 2nd millennium in Pagan in central Burma (c. 1050–1297) and Sukhothai in central Thailand (1238–1438), although the extant hard evidence consists solely of inscriptions. *The Epigraphy of Mahādharmarājā I of Sukhodaya* (Griswold & Prasert, 1992, 425–570) serves as an excellent example of the kind of writings that were produced in this period and the large degree to which Buddhist elements were found. A good deal of the epigraphy produced during the reign of the early Thai king Mahādharmarājā I (c. 1347–1374) deals with the production and installation of Buddha images, the support of monks, and praise for the Buddha, alongside accounts of the glorious exploits of the king himself. Likewise, there is a multilingual inscription from Pagan written in Pyu, Pali, Burmese, and Mon known as the Myinkaba Kubyaukgyi (or sometimes Myazedi) inscription from 1113 CE (Duroiselle, 1919). This prose text, sponsored by Prince Rājakumār (b. 1078), deals to a large extent with Buddhist themes such as dedicating Buddha images, enlisting slaves to assist in the maintenance of Buddhist sites, and honoring venerable Buddhist monks. A few generations later, in the middle of the millennium, a vernacular Buddhist literature in Cambodia and Laos also began to leave its mark. Although in all cases Pali literature continued to be produced, a vibrant vernacular corpus also emerged, providing a distinctive local identity that persists to the current day on various levels.

© Koninklijke Brill NV, Leiden, 2015
Also available online – www.brill

As they developed, the vernaculars themselves were ever more deeply infused with an Indic lexicon (for Sanskrit loanwords in Khmer, see Jacob, 1993, 128–139; for Thai, see Gedney, 1947; for Pali loanwords in Burmese, see Hla Pe, 1961) and partook of the prestige accorded to the trans-local, sacred languages of Pali and Sanskrit (Pollock, 2006).

The laity of mainland Southeast Asia, and indeed many of the monks themselves, did not necessarily understand the scriptural language of Pali in which the Theravādin canonical and commentarial texts were composed. It is not surprising therefore that many of the earliest extant works from Southeast Asia are bilingual commentarial texts explaining key canonical passages, terms, or ideas usually in vernacular language. These texts, early examples of which are extant in 16th-century palm-leaf manuscripts, are generally called *nissaya* in Burma (Pruitt, 1994); *nissaya, nāmasadda*, or *vohāra* in Thailand and Laos (McDaniel, 2008); and *saṃrāy* in Cambodia (for an overview, see Jacob, 1996, 49–52; examples in Ou-Chev, 1951), with the main difference between them being the amount of continuous source text cited before a vernacular exegesis begins. Not only are these texts intended to help the user understand the Pali source text, but they also commonly show a deep and creative engagement with the canonical texts around which they are structured. In Burma, they were often used in a scholarly context to help clarify the meaning of the source text, and in other parts of Southeast Asia, they are rather best thought of as notes or guides for making sermons by monks. As such, they are extremely valuable records of how Buddhism was taught to the people, and they tell us what society deemed important. Ethical principles were highlighted using references to topics well known to the laity, or the semantic meaning of certain words was explained, along with obscure grammatical points. A variety of social issues were also addressed in these texts. While a great deal of the canon and commentaries is glossed in various *nissayas*, complete, monolingual translations of the tripartite Pali canonical corpus known as the Tipiṭaka (Three Baskets) into the local languages of Southeast Asia emerged only in the second part of the 20th century: a Burmese edition was commenced in 1962 (*Tipitaka*, 1962ff.), a Khmer edition in 1969 (*Traipiṭak*, 1969) and a Thai edition in 1971 (*Phra Traipitok Phasa Thai Chabap Luang*, 1971ff.). There has not yet been a complete published translation of the Tipiṭaka in Lao, although a few *nikāya* volumes were produced in the early 1970s before the fall of the royalist government to the Marxists (McDaniel, 2008, 51).

The Pali texts of Southeast Asia before the 20th century were most commonly written on palm leaves that had been specially prepared for this purpose, usually inscribed with a stylus after which the grooves would be inked (Berkwitz *et al.*, 2009). Many of these manuscripts bear vernacular colophons written by the scribe that often provide information about the circumstances surrounding the production of the manuscript and the aspirations to gain merit or reach *nibbāna* on the part of the scribes and donors (Hundius, 1990). Vernacular texts were also commonly written on palm leaves, which would thereby link these texts with the prestige of the canon because of the strong association between the palm-leaf medium and the sacred canonical Pali texts. Vernacular texts were also written on folding books made from mulberry bark that were likewise revered (Ginsburg, 1989). A fuller picture of the variety and creativity found in the vast Buddhist vernacular literature of the region can be gained through an examination of the individual literary developments in the countries under study.

Burma

A number of languages influenced by Buddhist culture and ideas have been spoken in the area that is now called Myanmar, including Pyu, Burmese, Mon, and various Tai languages such as Shan and Khün. All of the early examples of vernacular writing in Burma come from inscriptions, known as *kyauk-cā* (lithic writing) in Burmese. There is a wealth of epigraphy that remains from the Pagan period that has been subjected to detailed study and that deals with Buddhist themes (Duroiselle, 1919). Although most of the literature of this period has come down in prose form, some poems, known as *laṅkā* (from Pali *alaṅkāra*, meaning an ornamented literary work) are traditionally held to have been composed during this time, such as a particularly famous one associated with Ānanda Suriya, who was condemned to death by King Narapatisithu (1174–1211; Allott *et al.*, 1963, 561). This poem is a meditation on the impermanence of life, the workings of *kamma*, and the yearning for release from the ongoing wheel of *saṃsāra*. In truth, however, it is impossible to know when this poem was composed, for, other than a few examples of verse that have found their way into the epigraphical record (Hla Pe, 1971, 60), all the

knowledge that we have of poetry supposedly from the Pagan era comes from chronicles written centuries later.

In general, as in all the areas of Southeast Asia, we know little about the literature in Burma beyond what remains in the inscriptional record until well into the 15th century. During the Ava period (1364–1555), one of the forms that became quite popular is the *ratu*, a lyrical ode, many of which dealt not only with love and war but also with the deeper philosophical questions at the core of Buddhism, often in concise and straightforward language. A well-known devotional *laṅkā* from the period is the *Tawla* (Forest Journey) composed by the monk Shin Uttama Kyaw around 1483. It describes a journey of the Buddha to Kapilavatthu using florid imagery drawn from the author's experience on a pilgrimage that he made to a pagoda in Myanmar. Here, nature is described in resplendent language as an homage to the Buddha (Ba Han, 1917).

The very popular *pyui.* (often written *pyo*) style of poetry developed during the Ava period (Hla Pe, 1971, 61–62) and remained popular through the Kon Baung period (1752–1885; for an example and study, see Okell, 1967). *Pyui.* tend to be fairly straightforward verse forms based on the hundreds of Pali *jātaka* tales that narrate stories of the past lives of the Buddha (Fausbøll, 1877–1897). The *pyui.* usually follow the Pali versions quite closely, embellished with some added narrative elements to create drama and interest (Hla Pe, 1971, 73). Two of the most prominent early composers of *pyui.* and other devotional works are Raṭṭhasāra and Sīlavaṃsa, who both flourished in the late 15th century. It should be mentioned that because of the system of monastic education, many of the most educated literati were monks or former monks, and therefore it is only natural that religious themes have featured highly in the literature. However, court poets did start to eclipse the monastic authors toward the late 16th century (Hla Pe, 1971, 64). It is clear that the heavy role of monks in writing poetry, while perhaps reflecting a more lax interpretation of the monastic Vinaya rules, contributed to the promotion of Buddhism to the faithful, who surely had far more acquaintance with the vernacular literature than with the obtuse Pali texts themselves. Interestingly, two poetesses, Mi Hpyu and Mi Nyo, at the Ava court were well respected in the literary scene of the time, both writing *ratu* on Buddhist themes (Khin Maung Nyunt, 1999, 39–42).

During the first Taungoo period (1510–1599), which was marked by almost constant warfare and jostling for power, the literature moved to focus more heavily on military rather than religious themes, leading to a low point of Buddhist literature in Burma. What Buddhist literature there was often came in the form of *ratus* written to extol the virtues of the Buddha (Hla Pe, 1971, 63; Khin Maung Nyunt, 1999, 46–47). However, in the 17th century, during the second Taungoo period (1599–1752), there were a number of important works of Buddhist literature composed, again, largely by monks. An important example is the *Maṇikuṇḍalavatthu* (Jeweled Ring of Stories) by Varābhisaṅghanātha, the abbot of Ava, which was an elaborate retelling of the *Mahāsutasomajātaka* (Peters, 2000, 255). A number of treatises on Buddhist canonical works and philosophy and monastic rules were composed during this period as well. Finally, the *thā-khyaṅḥ* (songs) should be mentioned, many of which were composed by the court poet Min Jeyya Rantamit on the basis of *jātaka* tales (Khin Maung Nyunt, 1999, 49).

The Konbaung period (1752–1885) was marked by brutal warfare with neighboring Siam as well as the steady encroachment of British interests on Burmese territory. Despite this, and of course in some ways promoted by the advent of print, there was often a flourishing literary scene, with old forms being revived and changed to suit expanding tastes and new forms being developed. As in other parts of the world, secular themes began to be ever more prominent in the writings of the period. The long narrative poem called *Ra kan* emerged in the early 19th century, and many of these were based on *jātaka* tales, interwoven with satirical elements tied to current events and personages of the day, doubtlessly to help combat the growing popularity of other, Western forms of literature (Herbert & Milner, 1989, 12). Contact with European literary forms such as the novel in the late 18th and 19th centuries also affected Burmese writing, leading to more of an emphasis on prose compositions. Here again, the *jātakas* were primary subjects for translation into the current Burmese prose idiom, such as the Burmese version of the *Vessantarajātaka* that was produced by U Obhāsa probably in the 1780s (White, 1906). The *Vessantarajātaka* (for background and English translation, see Cone & Gombrich, 1977) recounts the penultimate life of the most recent Buddha during which he was born as a generous prince who gave away all his most valuable possessions, including his wife and children. The final life of the Buddha, in which he was born as Prince Siddhattha Gotama, was also a common theme, and vernacular stories of the founder of the religion captured the attention of early Western scholars and missionaries as well (Bennett, 1853; Bigandet, 1866).

Another literary form that dates back to at least the 16th century and also flourished during the Konbaung period is the *mettā-cā* (epistle), written to advise a ruler about moral conduct and good rulership (Hla Pe, 1971, 68; Maung Htin Aung, 1968). It, too, was crowded with references to the Buddhist scriptures. Light can be thrown on the daily life and challenges during the last years of the reign of King Mindon (1853–1878) through the tales told by the learned monk Thingazar Sayadaw (1815–1886; Maung Htin Aung, 1966). Thingazar Sayadaw, a favorite of King Mindon, saw that life was changing all around him as Burma became more affected by contact with, and control by, the Western world. He was adept at using the traditional Burmese style of folktales to instruct both clergy and laity on how to lead good Buddhist lives and in particular to walk the middle path between what he saw as the moral laxity of the modern world and the reactionary puritanism that was being promulgated at the time by some other monastic leaders.

Burma has a strong tradition of legal literature based on local, Indian, and Buddhist principles, known as *dhammasattha* (treatise on the law). It has served to encode and legislate ideals of statecraft, kingship, and personal behavior and was produced up to the early modern period. There has been extensive production of such texts in all the countries under study as well, in languages such as Mon (Nai Pan Hla, 1992), Burmese and Pali (Lammerts, 2010), Tai (Huxley, 1996a), and Khmer (Leclère, 1898), some of which were ostensibly based on Pali originals, while others were composed originally in the local idiom. An accessible example is the *Manudhammasattham* that was purportedly translated from Pali into Mon by King Wageru during the late 13th century and was subsequently glossed in Burmese before the 18th century (Forchhammer, 1892). While the mythical ancestor Manu is often referred to in *dhammasattha* texts as a lawgiver, these texts are not local versions of the well-known Brahmanical *Manusmṛti* but rather encode quite distinct Southeast Asian traditions, laws, manners, and customs. The *Manu Kyay* composed in Burma during the reign of King Alaung Hpaya around 1756 collects a number of previous *dhammasatthas* and selects the most important sections and ideas from them; it was the first to be published in English (Richardson, 1847). In this work, Manu appears as a wise counselor of the legendary first ruler King Mahāsammata who, despite humble beginnings, attained advanced stages of meditation and then retrieved the law code written on a wall at the edge of the universe (Huxley, 1996b). There is no doubt that ancient local traditions were incorporated into this literature, but legal texts often turn to Buddhist scriptures for support, which also served to provide a higher authority against which powerful people would not wish to transgress. There are also legal works in the *dhammasattha* tradition that continue to be produced, such as the *vinicchaya* (judgment) literature in Burma that records rulings given by learned people (Carbine, 2004, 102).

A number of chronicles were written in literary Burmese, known as *rājavaṅ* (Pal. *rājavaṃsa*). These relate the history of kings and battles and emphasize the continuity of the royal lineage in order to legitimize the dynasty and preserve its triumphs for posterity. There is in general a great deal of attention paid in these works to the royal acts of merit and support for the Buddhist community in the realm and an endorsement of the Buddhist cosmology. Many such *rājavaṅ* exist, such as the famous *Mhan-nanḥ mahārājavaṅ tau krīḥ* (Glass-Palace Chronicle; Luce & Pe Maung Tin, 1960) compiled by a committee of scholars between 1829 and 1832. It relates the whole history of Burma, starting with mythic elements of how Buddhism arrived in the land. An important early modern work along these lines that should be mentioned is the *Sāsanālaṅkāra cā tamḥ* (Treatise on the Adornment of the Religion; Mahādhamma Saṅkraṃ, 1897) from 1831, which deals comprehensively with the history of Buddhism in Myanmar. The Pali *Sāsanavaṃsa* (Chronicle of the Religion; Bode, 1897) which has been used by Western scholars as a major source for the history of Buddhism in both Burma and Sri Lanka is in fact based on this Burmese text (Lieberman, 1976, 139). *Samuiṅḥ* were accounts of the establishment of monasteries, temples, and stūpas that were written to extol these meritorious activities and are similar to the *tamnān* (story, legend) of Thailand (see below).

In the 20th century, there was a strong revival of Burmese literature, and a number of new forms arose. Vernacular *ṭīkā*s (subcommentaries) were written as a form of religious commentary often on current affairs of the time. The Buddhist response to the changing conditions of modernity associated with such figures as the insight meditation master Ledi Sayadaw (1846–1923) also produced much Buddhist literature aimed at explaining meditation practices to the laypeople (Braun, 2013). Ledi Sayadaw was a prolific writer on a number of subjects including Buddhist philosophy, scripture, meditation, and grammar. He also wrote devotional literature about such topics as the life of the Buddha, which are still recited tod

hymns. Another luminary, the well-re

Another luminary, the well-respected monk Manlei Sayadaw (1841–1920), wrote a great deal about religious themes, and his long verse *Mahāsūtakārī Maghadeva* (Manlei Sayadaw, 2005) is an encyclopedic collection of knowledge about religion and other matters as well.

Much of modern Burmese literature continues with the themes of the classical literature, which is in turn heavily influenced by Indian poetic ideas as well as Buddhist stories and philosophical notions found in the Pali canonical literature. Plays (*pya-zat*, "shown story") in a modern style but based on *jātaka* tales were written for performance overnight as was traditional (Hla Pe, 1952). A good deal of commentarial literature has been produced in the modern period, and like the popular *Kuiy Kyaṅ Abhidhamma* (Abhidhamma in Daily Life) written by the anti-sectarian monk Janakābhivaṃsa (1900–1977) in 1933 (U Ko Lay, 1999), it is often heavily tinged with notions from the Abhidhamma, which has always had an important place in the Burmese imagination. Modern handbooks intended for the laity explaining how to follow the religion and properly perform and interpret key rituals are also commonly found in Burma today, such as *Putīḥ cip naññḥ* (Method of Counting Beads; U Taṅ Cui, 1999).

Thailand

The earliest known text in the Thai language is the celebrated Rāmkhāmhaeng inscription from Sukhothai proclaiming that the king developed letters with which to write the Thai language. While it is generally dated to 1292, this dating has been the subject of great controversy, with some scholars even claiming, based on orthographical and lexical evidence, that the text is a 19th-century forgery (Chamberlain, 1991, esp. ch. 1). The inscription is written in an elegant literary style and tells of the respect accorded to a learned monk who had studied the Buddhist scriptures and used this learning to spread the religion in Thailand. The great deeds of King Rāmkhāmhaeng are enumerated, and his exemplary leadership is praised, but there is a clear focus on his merits as a Buddhist monarch, setting the stage for a tradition of deep literary engagement between the rulers and Buddhism that continues to this day.

During the Sukhothai period, collections of didactic verses known as *suphasit* (Skt. *subhāṣita*, that which is well spoken) began to emerge. These are often said to have personally been written by early kings and have come down to us in various recensions, all heavily influenced by Pali gnomic works such as the *Lokanīti* (Bechert & Braun, 1981) and *Dhammapada* (Carter & Palihawadana, 1987), and often written in the simple *rai* meter. The earliest example is said to be the *Suphasit Phra Ruang* (Gerini, 1904), which does appear to be quite old, for it uses an archaic lexicon and terse forms consistent with inscriptions of the period (Gerini, 1904, 15). However, the oldest extant versions do not date back earlier than the 18th century. These *suphasit* have served as wide-ranging moral guides for both rulers and subjects and have the benefit of being easily memorized, thus helping to disseminate some basic Buddhist principles of good behavior throughout the region.

Other texts in which the narrative takes a back seat and that also aim primarily to direct behavior are the *anisong* (Pal. *ānisaṃsa*, blessing) texts, which extol the benefits of various acts of religious devotion (Swearer, 2004, 60–63; Veidlinger, 2006, 189–190). While their origins are unknown, some of the earliest manuscript examples of such texts date from the early 18th century (Veidlinger, 2006, 189). They generally focus on how one can achieve merit by making or honoring sacred items such as relics, stūpas, and manuscripts, or by supporting monks or listening to Buddhist texts.

The most popular cosmological text to have been composed in Southeast Asia, whose influence has spread far beyond the borders of Thailand, is the *Trai Phum Phra Ruang* (Skt. *Traibhūmikathā*; Reynolds & Reynolds, 1982). This is a lengthy vernacular work traditionally attributed to the Sukhothai period telling of the three worlds according to Buddhism, those worlds being the realm of material reality, the realm of pure form, and the highest, formless realms. Its authorship and date are unclear; it was written according to the colophon in what is probably 1345 by Phya Lithai, who was a prince at the time and later held the throne, but similar to the *Suphasit Phra Ruang*, the earliest manuscript evidence for this text dates from the late 17th century (Vickery, 1974). This work lays out in great detail the various conditions in which persons might find themselves based on their *kamma*. The possible realms of rebirth are laid out, with detailed descriptions of the tortures of hell and the rewards of heaven, and the final chapter outlines the greatest bliss of nirvāṇa. Highly creative and fantastical visions of the different realms have ignited the Thai imagination for centuries. Cosmological motifs derived from this work have been ubiquitous in Thai literature as well as architecture and painting, which served to strengthen the court, which was itself associated with the heavenly world.

Another very popular tale in Thailand with cosmological themes is the *Phra Malai* (Brereton, 1995), which is probably based on a postcanonical story about a monk known in Pali as Māleyya (pronounced Malai in Thai; Collins, 1993). Not only has this story been retold in countless versions in the various Tai dialects, but it is also a common theme for temple art and manuscript illumination. In this story, Phra Malai is an enlightened monk who visits the heavens and hells and delivers sermons about the *dhamma*, thereby helping many beings to reach enlightenment. In the course of his adventures, he learns about the different forms of suffering in hell and rewards in heaven and comes to understand that they are the karmic fruit of various sins and meritorious deeds committed in past lives. He is also told by the future Buddha Metteyya how beings might be able to gain enough merit to be reborn during a time when he has come to earth to help beings reach nirvāṇa, which usually involves listening to the *Vessantarajātaka*. As such it is a perfect story to explain the key ideas of Buddhism and has served as the didactic text par excellence throughout Thailand.

The *Vessantarajātaka* has always been one of the most popular stories in Southeast Asia, but the hundreds of *jātaka* tales about the previous lives of the Buddha before he was born as the current Buddha Siddhattha have also been a fecund source of narrative texts composed throughout the history of Buddhism in Thailand. The *Paññāsajātaka*, an extracanonical Pali collection of 50 Buddhist birth stories (Horner & Jaini, 1985–1986) produced probably in Chiang Mai in the 16th century, has proven to be a particularly important source for Thai poetry. Some of the greatest court poets wrote works inspired by this collection, such as Phra Mahārātchakhru, who composed the *Sua Kho*, a story about a tiger and a bull that are transformed into princes because of their good *kamma* (Mahārātchakhru, 1922). There are also a number of retellings of the life of the Buddha, from his birth as Prince Siddhattha through to his experience of the four sights (an old man, a sick man, a dead man, and an ascetic), his renunciation, and eventual enlightenment, with the early 19th-century Thai version of the *Pathomsomphotikatha* (Pal. *Paṭhamasambodhikathā*) written by the royal monk Paramanuchit Chinorot in the mid-19th century being the most highly revered (for a study of the text, see Laulertvorakul, 2003; for a translation of a Thai version, see Alabaster, 1871, 77–162).

Thailand is blessed with an abundance of historical narratives, typically written by monks to record and glorify the progress of the Buddhist religion (for examples, see Rawin, 1995; Wyatt, 1994). Those that focus more on religious matters are usually known as *tamnān* (story, legend), and those that deal more with secular matters are known as *phongsāvadān* (Skt. *vaṃśāvatāra*, tales of dynastic descent). These chronicles characteristically begin with a world history and relate the birth of Gotama Buddha, including sometimes buddhas of previous epochs as well. They then move to narrate the growth of Buddhism and tell of how the religion (and often the Buddha himself in some form) came to Thailand before focusing in on the matter at hand, namely the history of the monastery or region in which the chronicle was produced. Besides merely recording history for posterity, they serve to sacralize the region as well as to inspire the laity through accounts of the great heroes and monks of yore. Their overall form is based largely on Pali chronicles such as the Sri Lankan *Mahāvaṃsa* (The Great Chronicle; Geiger, 1912) and the northern Thai *Jinakālamālīpakaraṇaṃ* (The Sheaf of Garlands of Epochs of the Conqueror; Jayawickrama, 1968, and much of their content is derived from these sources as well. While their value as sources for academic history is debated, there is no doubt that they fulfill an important role in the development of regional identities. A project to collect and publish a large number of chronicles from all over Thailand began in 1996 to celebrate the 50th anniversary of Bhumibol Adulyadej (b. 1927), the king of Thailand, whose regnal name is Rama IX.

Buddhist themes were given pride of place in much of the court poetry of the Ayutthaya period (1350–1767), during which this literature reached a high point. Indian poetry was greatly influential during this period, and Thai poetics tried to emulate Indian ideals in various ways, adapted of course to the very different tonal and uninflected Thai languages. The *Chandāmaṇī* (Jewel of Prosody), written in the 17th century, is the earliest known Thai treatise on Indian prosody; it is based on the 12th-century Pali work *Vuttodaya* from Sri Lanka. The important Indic metrical convention of classifying syllables as light (*lahu*) and heavy (*garu*) is here applied to Thai words. The two Thai poetic forms explicitly based on Indian prosody are the *chan* (Pal. *chanda*, chant) and *kap* (Skt. *kāvya*, poetry) forms, both of which may have come to Thailand through interaction with the Khmer court, which

) and *kap* (Skt. *kāvya*, poetry)
h may have come to Thailand
with the Khmer court, which

was at this point strongly influenced by Indian literary forms, or through participation in the greater Pali literary world (Terwiel, 1996). The earliest example of *chan* verse in Thai poetry occurs in sections of a version of *Vessantara* known as *Mahāchāt Kham Luang*, which can be traced to the mid-15th century during the reign of King Trailokanāt (Hudak, 1990, 16). Native Thai verse forms were also perfected during this era, such as *rai* and especially *khlong*, a poetically translated example of which serves to illustrate the way in which rhyme and meter were used to express Buddhist concepts such as impermanence and *kamma*:

> All on earth alike Pass away; Yet our deeds, they stay; Shadow-fast Pursuing day by day, Good or ill, Their fruit remains at last. This our comfort! This our hope! (*Lilit Phra Law*; trans. Cooke, 1980, 430).

The *lilit* verse, which combines the *rai* and *khlong* forms (Bickner, 1991), is a classical Thai literary form that was often used for epic tales, which tended to be more influenced by Hindu rather than Buddhist sources, such as the *Rāmāyaṇa*, although again modified for Thai tastes. A number of the most highly regarded poetic works are based on various *jātakas*, which commonly served as subject matter during the Ayutthaya and subsequent periods as well. Of particular note is the *Samuthakhot Kham Chan* (discussed in Phromsuthirak, 1979, 48–49), which is based on stories from the *Paññāsajātaka* and is replete with Indian mythological references and Buddhist morality. It was completed by many hands over several centuries starting during the reign of King Narai (1656–1688).

Much Thai art and literature may have been destroyed by the Burmese during the sack of Ayutthaya in 1767, and it is impossible to know exactly what treasures were lost to posterity. However, strong efforts were made during the Ratanakosin period that commenced in 1782 from the new capital of Bangkok to restore Thai culture to its previous state. Like the Burmese, the Thai also possessed a formal tradition of legal literature known as *dhammasattha*; it was translated from Mon, which in turn was translated from Pali. After the cultural destruction of 1767, a major task was to reconstitute this legal tradition and a collection was compiled under the direction of King Rama I (1782–1809).

Perhaps the single most popular work of Thai literature since the Ayutthaya period has been the *Rāmakien* (Olsson, 1968), which is the Thai telling of the *Rāmāyaṇa*, of which there are many different versions, each with slightly different emphases. The most important version was produced during the reign of King Rama I, with his personal assistance. The characters and styles of dress, weapons, and architecture are adapted to Thailand, and Indian gods such as Viṣṇu, here called Narai (Skt. Nārāyaṇa), and Indra feature prominently. Often described as the greatest literary figure of the age, the court poet Sunthorn Phu (1786–1856; Wenk, 1985) wrote a number of works with Buddhist themes, such as the *Nirat Phra Bat* in *khlon* verse about his participation in a pilgrimage to worship the Buddha's footprint in Saraburi in 1807.

Overall, a good sense of the landscape of traditional Thai Buddhist literature can be garnered through a perusal of the *Catalogue of Palm-Leaf Texts on Microfilm at the Social Research Institute, Chiang Mai University* (Buddharaksa & Premchit, 1986). This catalogue of almost a thousand texts includes dozens of examples of vernacular works written in the Northern Thai dialect on such topics as Buddhist history, *jātakas*, the Suttas, Abhidhamma doctrine, disciplinary rules (Vinaya), religious teachings, blessings, cosmology, and poetry in all the well-known meters.

A relatively recent development that is based on older traditions is the printing of cremation volumes (*nangsü anuson ngānsop*) that are commonly produced to honor the dead. The tradition of handing out gifts at important occasions such as cremations in order to build merit has a long history in Thailand and other Buddhist countries, but the practice of preparing short-run printed volumes for distribution at cremation ceremonies in Thailand probably goes back to the 19th century. These volumes are important sources of cultural and historical information and are invariably deeply connected to Buddhism. They often contain some remarks about the life and death of the deceased as well as some Pali verses that might be used at the ceremony. After that, they often discuss the various ways in which one can lead a good Buddhist life, with the aim of helping the recipient gain merit. Warnings against accumulating bad *kamma* are also common, and the principle of karmic retribution is emphasized. Buddhist ethics and aphorisms also feature prominently in these works (Olson, 1992). Also ubiquitous at funerals is chanting of selections from the Abhidhamma that examine in detail the makeup of the human physical and mental aggregates and the relations that obtain among them. These selections are presented and interspersed with Thai vernacular commentary in the *Abhidhamma Chet Khamphi* (Seven Books of the Abhidhamma) manuscripts, which date back to at least the 18th century (McDaniel, 2008, 233–236).

These texts transform the syllables of the titles of the Pali Abhidhamma texts into cosmic elements with creative power, similar to tantric mantras (Swearer, 1995, 336–342). Other texts are also chanted at many ritual occasions besides funerals, and these can be found in Pali with their Thai translations in the *Suat Mon Chabap Luang* (The Royal Thai Chanting Book), which has been published since 1878 (McDaniel, 2008, 234). It includes the most popular *paritta* (protective) texts as well as selections from the canon that are used in ritual contexts, such as the salute to the Buddha known as *iti pi so* and the three refuges confession of faith (for an accessible English version that is substantially the same as the *Suat Mon Chabap Luang*, see *A Chanting Guide*, 1994).

Modern Thai literature starting in the 19th century was heavily influenced by Western literary forms, and novels have become popular in Thailand as elsewhere in Southeast Asia and the world. Many Thai novels include themes that emerge out of the Buddhist worldview, such as karmic retribution or the social role of monks. A fine example of this is former Prime Minister Kukrit Pramoj's (1911–1995) *Lai Chivit* (Many Lives; Pramoj, 1996), which tells of the sinful and meritorious lives of people killed on a boat. One of these is a monk who exemplifies Thai Buddhist values and is one of the more eloquent presentations of the Buddhist ideal in modern fiction. Other modern writers who must be mentioned are Buddhadāsa (1906–1993; Jackson, 1988), who wrote a great deal of canonical commentaries of a reformist bent that are still popular today, and Sulak Sivaraksa (b. 1933), who has written many widely read books on socially engaged Buddhism (Sivaraksa, 1981).

Laos

The Lao language – like Khün, Shan from the northwest, Yuan from the northern Kingdom of Lanna, and Lü – is part of the Tai family of languages, and the broad contours of Lao Buddhist literature are similar to those of Thailand but have seen far less scholarly study. Buddhism has played an important role in bringing the people together to form a Lao identity, but Laos also has a relatively large contingent of non-Tai highland peoples who do not share the Buddhist culture of the majority Lao speakers. Some particularly high periods of literature in the Lan Xang ("One Million Elephants") Kingdom (1354–1707) can be found during the reigns of Visunarāt (1500–1520) and Phothisārarāt (1520–1547) and his son Xetthāthirāt (1548–1571). All of these kings promoted Buddhism and brought learned monks from northern Thailand to strengthen the religion in the Lao region.

Jātaka tales and stories of the life of the Buddha were particularly popular during this early period, including the apocryphal birth stories from northern Thailand. The Lao have a distinctive version of the *Rāmāyaṇa*, known as *Phra Lak Phra Lam*, in which Rāvaṇa conducts himself in a noble manner and is greatly admired (Sahai, 1973). Like other versions, it tends not to have a great deal of Buddhist imagery. There are other versions of this text in Laos, however, such as the one in Tai-Lü known as *Phommachak* (Skt. Brahmacakra [The Wheel of Brahma]; Lafont, 2003), that have the contours of a *jātaka*. Here, Rāma is associated with the Buddha-to-be (Bodhisatta), Rāvaṇa takes the position of Māra within the Buddhist pantheon, and the main characters' adherence to Buddhist principles is mentioned throughout. Religious stories of Ānanda, the Buddha's main disciple, and tales of other Buddhist saints such as Upagupta are known (Strong, 1992, 220). Stories and legends about the Buddha traveling to the region and leaving his footprint and about the way in which various relics were obtained and enshrined in stūpas abound. As at other sites in the region, in Laos there is a great love of folktales known as *nithān* (Skt./Pal. *nidāna*), which tend to focus on stories of love and adventure. The most important of these is the *Nithān Khun Borom* (Phothisane, 1996), which tells of the introduction of Buddhism during the legendary reign of King Borom. Other chronicles relate tales of the historical founder of Lan Chang, King Fā Ngum (1353–1374), and developments in the religion, including the reforms of King Xetthāthirāt, who tried to remove some of the more superstitious elements connected to spirit worship. Various versions exist of this important text, which covers a great swath of Lao history (Phothisane, 2002). Perhaps the most beloved stories are the tales of Xieng Mieng, a former novice monk with a quick wit and impish personality, who is eternally tricking his superiors in one way or another (Epstein, 1995). Xieng Mieng would be happy to find himself mentioned in the august company of the other works herein, for, in truth, there is not much Buddhism in his stories.

Lao Buddhism has been affected greatly by northern Thailand and Burma, as monks from Chiang Mai and other places came to centers such as Vientiane and Luang Prabang bringing texts and images, especially during the formative years of the 16th century. Perhaps even more than in other countries, there is a strong admixture of spells, potions, astrology, and

than in other countries, there is
of spells, potions, astrology, and

apotropaic magic in the Buddhist texts and practices of Laos. *Anisong* are well known in Laos, and they are often used in a magical context, as are the similar *xalong*, which help guide the performance of religious ceremonies and are commonly found throughout the country. There are also Lao *tamnāns* whose function is similar to that of Thailand *tamnāns*, namely, to record the history of specific monasteries, relics, and Buddha images. Although very little of this literature has been published in accessible forms, examples of all these texts can be found online in the Digital Library of Lao Manuscripts (www.laomanuscripts.net).

One text – in several Lao versions – that has been subjected to the most in-depth study by Western scholars is the *Saddavimala* (Purification by Words; Bizot & Lagirarde, 1996). This text, which is also found in Yuan, Lao, Khün, and Lü collections, discusses the importance of employing the correct pronunciation of Pali in order to create a ritual body of the Buddha that substitutes for the impure body of the aspirant to assist in achieving liberation. It is part of a genre known as *yogāvacara* (the application of yoga; Crosby, 2000), which was common throughout the region before the modern era and incorporates many tantric elements into the local practice of Buddhism. The use of the vernacular languages to spread the teachings of the Buddha helped to imbue Pali with the esoteric function seen in the *yogāvacara* texts. As Pali became less commonly used and more removed from daily experience, it also became ever more mysterious and powerful.

Cambodia

Khmer is the most commonly used language of Cambodia, and it is related to Mon in the Austroasiatic family. The literature written in this language is rich in Buddhist-themed cosmology, history, narratives, and ethics. Some of the earliest vernacular inscriptions in Southeast Asia are in Khmer and date from the 7th century (Herbert & Milner, 1989, 52), and Indian metrical influence can be seen as early as the 10th century (Coedès, 1968, inscription 173; see also Terwiel, 1996, 313). The early Khmer Empire was largely Hindu, with Buddhism only eclipsing it in the 13th century (Chandler, 1996, ch. 3), but Buddhism was certainly practiced in the area in the 1st millennium, especially in the southeast region that was known to the Chinese as Funan (Chandler, 1996, 12–21).

The most important literary work in Khmer to this day is the *Reamker* (Skt. *Rāmakīrti* [The Glory of Rama]; Jacob, 1986; Bizot, 1989), which is a version of the *Rāmāyaṇa*. While the text follows the general contours of the Indian version, one key difference is that here, as in some of the Lao versions, Rāma is reconfigured as the Bodhisatta (Buddha-to-be), thus injecting Buddhist themes into the story, which ends up looking something like a *jātaka*. The *jātaka*s themselves are also commonly read in Khmer and have been an influential source for Khmer literature, as they have throughout Southeast Asia (for a selection of Khmer versions of *jātaka*s, see Huffman & Proum, 1977, 251–304). As in other Southeast Asian countries, the *Vessantarajātaka* has been the most popular of the *jātaka*s, and numerous versions of it exist (Leclère, 1902). *Jātaka*s have commonly been turned into *sātrā lpaeṅ*, which is narrative epic poetry dating from the 16th century that typically has exciting scenes of love and battles (Leclère, 1895, 291–293; 1906, 121–340). *Jātaka*s were also common themes for the longer *rioeṅ* verse-fiction tales, which had their heyday in the 18th and 19th centuries (for summaries of many of these poems, see Jacob, 1996, 148–182). Another very popular literary poem throughout Cambodia is the *Tum Teav*, which is ostensibly based on events from the 16th or 17th century and rendered probably in the 19th century in a form that straddles traditional and modern Khmer writing (Chigas, 2005, 16). There are many versions of this tragic tale of forbidden love between a monk and a beautiful young woman. *Kamma* plays an important role in the fate of the protagonists, and the story depicts the severe consequences of uncontrolled desires.

Cpāp provide codes of conduct to guide people on a proper Buddhist life, instructing them in moral behavior and religious values, and have been produced since at least the 17th century (Chigas, 2005, 202n75). One might find passages telling of how the light of the *dhamma* is the greatest, for it lasts forever while that of fire can be extinguished and that of the sun is lost each night (Jacob, 1996, 30). They are similar to the already mentioned *subhāṣita* that are known in other countries as well as Cambodia. They have often been memorized and taught to the next generation in order to ensure that the right ways to behave are passed on (for a selection of representative *cpāp* in Khmer, see Huffman & Proum, 1977, 149–181; for selections in Khmer along with French translations, see Pou, 1988).

There was much sharing of stories and literary styles across Southeast Asia, and works such as the *Traibhūmikathā* and *Paṭhamasambodhi* (Leclère, 1906, 7–114) were translated from Thai into Khmer in the 19th century and became very popular. As in the other countries of the region, chronicles were also composed by monks and royal scribes that record the history of various dynasties and also of sacred relics or the Buddhist religion in general. These chronicles are generally known in Cambodia as *baṅsāvatār* (Skt. *vaṃśāvatāra*; Mak, 1981; 1984; Khin, 1988) and are similar in form to the texts of the same name in Thailand.

Many oral tales with a Buddhist flavor were collected in the early 20th century and published by writers such as Ukñā Suttantaprījā Ind (1859–1925), who wrote the narrative ethical treatise *Gatiloke* (Ways of the World), advocating the development of *satisampajañña* (moral discernment/mindfulness) through tales collected from Cambodian folklore (Carrison & Kong Chhean, 1987). Many of these stories involve monks and novices who behave in ways that the faithful should emulate and also poke fun at the Brahmanical hierarchy. The former monk and Pali scholar who compiled this collection was part of a group of modernist reformers who emphasized the importance of moral conduct and following the *dhamma* properly in pursuit of self-purification, rather than adhering to the older forms of Buddhism that deviated from the canonical texts and were too laden with mythology at the expense of rationality. A popular literary form at the time was the *saṅkhep*, which aimed to deliver abbreviated versions of seminal texts especially to the laity, in order to instruct them as directly as possible in the key ideas of the religion, as seen by modernist monks. These works helped to build an understanding of Buddhism in Cambodia in which Khmer Buddhist values could be reflected through proper behavior in the modern colonial context (Hansen, 2007). An important journal that helped to shape the public reception of Buddhism in modern times was *Kambujasuriyā*, which was launched in 1926 by L'Institut Bouddhique and became a venue for articles about a variety of religious affairs (for a comprehensive list of texts published in *Kambujasuriyā*, including *jātakas*, *cpāp*, and narrative verse of all kinds, see Jacob, 1996, 214–228).

Languages

Languages: Indic

The linguistic history of Buddhism begins with a lost language, that of the Buddha. The most ancient languages extant are Pali, Gandhari, and Buddhist Hybrid Sanskrit. These, however, are derived from a still earlier language (Buddhist Middle Indic), which can be reconstructed, if only to a very limited extent. From the very beginning, a large variety of Middle Indic languages, later also Sanskrit, was used by Buddhists, out of which, in the course of time, certain individual languages were selected and adopted by Buddhist schools as one of the marks of their identity. Only two of these languages, Pali and Sanskrit, are described by indigenous Buddhist grammarians. A large number of different scripts were used to write down Buddhist texts in manuscripts.

From the very beginning, Buddhism was, it seems, multilingual in stark contrast to the Vedic religion absorbed by and continued in contemporary Hinduism, which allows only Vedic Sanskrit as the language of the holy texts (Vedas). In the same way, the Jainas limit their languages to a Prakrit, that is, Ardhamāgadhī, and Sanskrit.

In a famous but poorly understood episode preserved in the original Indian language only in the *Vinayapiṭaka* of the Theravāda school in Pali (for Chinese parallels, see Brough, 1980), the Buddha is supposed to have been approached by two monks who were brothers, and were – in spite of their outlandish name, Yameḷutekula (Yameḷakekuṭa in the Burmese tradition; Meṭṭhakokuṭṭha in the Siamese tradition) – introduced as Brahmans well versed in many ways of speech. They complained that there were (at the time of the Buddha) many monks with different linguistic backgrounds who spoiled the word of the Buddha by using their own ways of speech (*nirutti*). Therefore, the two brothers suggest that they commit (*āropeti*?) the word of the Buddha to a uniform way of speech, which they call *chandaso*. According to the tradition, their request is rejected. In this context, the exact meaning of the Pali words *nirutti* and *chandaso* (Vedic language?, verse?; see also Ruegg, 2000; von Hinüber, 1995, 191) is unclear. This intervention of the two Brahman brothers is interpreted by later Theravāda tradition in the *Samantapāsādikā*, about a millennium after this text was conceived, as the intention to propagate the use of Vedic language (Sp 1214). However, the objective of this episode seems to be that the words and the message of the Buddha should be conveyed without any restriction in the use of languages.

This generally very liberal approach to linguistic usage becomes visible also in the legal procedure applied if a monk wishes to leave the saṅgha: the necessary declaration can be made in any language as long as the person, in whose presence the relevant words are spoken, understands the intended meaning (on use of different languages, see Schopen, 2009). In contrast, when entering the saṅgha, the formulas to be spoken at that occasion are strictly fixed and prescribed in a very detailed way, including even the correct pronunciation of each individual word (von Hinüber, 1987).

Moreover, the Theravāda tradition understands, following again the interpretation of the *Samantapāsādikā*, the term *nirutti* (speech) as referring to the language used by the Buddha himself. This language, according to the traditional understanding of the Theravādins and others, was of course the language of Magadha (Pal. *māgadhiko vohāro*, speech current in Magadha), where the Buddha lived and taught. Magadhi was and is supposed by the Theravāda Buddhists to be identical with Pali, which was, at the same time, considered the original language of mankind (*Ursprache*) spoken naturally by any human growing up alone in the wilderness and being unable to listen to his or her mother or father (von Hinüber, 1977, 80ff., 239). This concurs with corresponding ideas in Hinduism, in which Sanskrit holds the same position particularly in the Vedic tradition, and Ardhamagadhi in Jainism.

However, very soon after Western linguistic research on Buddhism began in the early 19th century with the Pali grammar by E. Burnouf and C. Lassen (1826; additions in Burnouf, 1827), it became clear that Pali can have been neither the language of the Buddha nor the language used in Magadha, which roughly corresponds to contemporary Bihar. This was demonstrated first of all by the French Buddhologist S. Lévi in his fundamental article "Observations sur une langue précanonique du bouddhisme" (1912). Here, S. Lévi sums up earlier research of the 19th

century and presents the new and seminal idea that the phonetic shape of some words found in Pali and Buddhist Hybrid Sanskrit can be explained only by recurring to phonetic developments, which do not operate in either language. This observation was explained by S. Lévi as pointing to a third, lost language as the common ancestor of both Pali and Buddhist Hybrid Sanskrit – the *langue précanonique*.

Arguing this way was possible only after the decipherment of the script of Aśoka's inscriptions by J. Prinsep in 1837, because these texts provide a solid basis for tracing the linguistic development and the linguistic geography of India during the 3rd century BCE. Aśoka Maurya (Skt.; Middle Indic: Asoka Moriya; r. c. 269–232 BCE) decided to convey his message to his subjects in three linguistically different versions in his 14 major rock edicts. The large majority of these texts is composed in an eastern variety of Middle Indic (described in Oberlies, 2003b), supposed to correspond to the language used by the Maurya administration in their capital in Pāṭaliputra (modern Patna). The same Middle Indic is also found in the minor rock edicts and in two separate edicts in Kalinga (i.e. modern Orissa). A linguistically different version of the major edicts was engraved on a rock in west India, at Girnar in Gujarat, where a variety of Middle Indic close to Pali was preferred. The third Middle Indic language (Gandhari; see below) was employed in the northwestern inscriptions at Mansehra and Shahbazgarhi in Pakistan.

This distribution allows demonstrating without much effort that Pali as the oldest surviving Middle Indic language (besides the northwestern Gandhari) is as close to the version of Aśoka's edicts at Girnar as it is different from the eastern official language of the Maurya Empire. An easy example of how to discern the eastern from the western variety of early Buddhist Middle Indic is the different development of *r* and *l*. While the western language preserves the sound *ra* and has *rājā* like Sanskrit, in the east *ra* changes into *la*, and consequently *rājā* is converted into *lājā* (king). However, the traces of the pre-canonical language, dealt with by S. Lévi and later systematically explored by H. Lüders (1952), show some affinity to Aśoka's eastern inscriptions. Therefore, H. Lüders named the administrative language of the Maurya court "Old Ardhamagadhi (half Magadhi)" (to distinguish it from the later Ardhamagadhi used by the Jains), the language used by the Jainas, which is more developed and younger (see Alsdorf, 1980).

Considering that the Buddha lived and taught in eastern India, the conclusion to be drawn from these linguistic observations is obvious: the oldest Buddhist texts, which were superseded and consequently lost probably rather soon, were originally transmitted in an eastern variety of Middle Indic, the precanonical language most likely similar to an old variety of Ardhamagadhi. However, when Buddhism began to expand over a wider area in North India, far beyond the borders of its homeland Magadha, texts were recast into a western form of Middle Indic (Pali) in order to adapt them to a language that would reach a larger audience.

Consequently, the language used during the beginnings of Buddhism and by the Buddha himself was superseded, given up, and completely lost because of these developments. Being a native of Kapilavastu, the Buddha most likely would have spoken and used in his instructions the eastern Middle Indic current in his native town or a close variant. It is, however, impossible to get a more precise picture of the very earliest language of Buddhism, which certainly was a vernacular, and not Sanskrit. In abandoning the Vedic language, the Buddha followed the general trend of his time (Deshpande, 1994). This can be seen by comparing the Middle Indic language used by the Jainas (Ardhamagadhi) and probably also by the "six heretics," contemporary sectarian leaders such as Makkhali Gosāla at the head of the Ājīvikas. The exact nature of the language of the "heretics" remains, however, as elusive as that of the Buddha himself (von Hinüber, ^{2}2001, § 351, 407, 409).

Together with the language spoken by the Buddha, the original wording of the oldest texts is irretrievably lost, while the content of the teaching is transmitted in Pali, Gandhari, and other languages. This also raises the question if and how these lost texts might have been arranged. H. Lüders assumed an original canon (*Urkanon*) in Old Ardhamagadhi (Lüders, 1952). Subsequent research, however, demonstrated that there is no clear indication of the existence of an *Urkanon* but only of individual texts preceding the extant T(r)ipiṭakas (Bechert, 1980; von Hinüber, 1983b).

As literary languages, both Pali and Buddhist Hybrid Sanskrit are, in contrast to Gandhari, not the spoken idiom of any well-defined area. This is obvious at once from the language name "Pali" and even more so from the "nameless" Buddhist Hybrid Sanskrit, because names of Indian languages with very rare exceptions such as Sanskrit and Paishaci (von Hinüber, ^{2}2001, § 51, 98ff.) refer to the area where they were or are spoken. Pali, however, originally means "Canonical Text" in opposition to *aṭṭhakathā* (commentary on the canon [Tipiṭaka]), and it was used as a name of the (canonical) language only at a

very late date, perhaps since about the 12th century (von Hinüber, ²2001, § 3; Crosby, 2004).

Pali is clearly an ancient literary language used over a large area, originally perhaps conceived as a "common language of the Gangetic plains" as pointed out by the Swedish linguist H. Smith (*κοινή gangétique*; von Hinüber, ²2001, § 29). At the same time, Pali is the Middle Indic nearest to the Vedic language. Pali precedes the texts preserved in classical Sanskrit as described and fixed by the grammarian Pāṇini (c. 350 BCE[?]) and thus in a way bridges the gap between Vedic and classical Sanskrit. Therefore, Pali is of importance also for the linguistic history of India beyond Buddhism.

When the original texts in the eastern language were recast into Pali, eastern words and forms were usually replaced by their western equivalents. This, however, was not done systematically. Retaining eastern forms occasionally resulted in a unique mixture of both eastern and western features found side by side in Pali, such as the optative forms of the verb "to be." The western form *assa* is employed besides the synonymous eastern *siyā*, both meaning "could be." This and other traces of the eastern language can be explained as remnants from the superseded and lost earlier texts.

Besides the choice to keep certain old eastern forms, the change of language was not always executed in a perfect way, and errors occurred in many details. These errors were used by S. Lévi and particularly by H. Lüders as the methodological clue to detect and to describe the linguistic developments starting from the original Buddhist language and ending in the formation of Pali and Buddhist Hybrid Sanskrit. Technical terms or place names in particular were liable to be misunderstood. Many place names were unknown beyond Magadha and consequently could not be adapted properly. Thus the eastern name of the mountain Isigili (near present-day Rajgir) was preserved in Pali and explained as the "(mountain, by which) ascetics (Pal. *isi*; Skt. *ṛṣi*) were devoured (Pal. *gilati*)" instead of being converted correctly into western Isigiri ("Mountain of the Ascetic[s]") with the abovementioned development of *r* to *l* in the word *giri* (mountain) reverted.

Moreover, giving up the original eastern language and trying a new linguistic approach opened the opportunity for changes far beyond recasting an eastern into a western idiom. Sometimes even Sanskrit forms were introduced into Pali perhaps already at this early date. This can be demonstrated by the help of verses in the *Suttanipāta*, where the word *brāhmaṇa* is explained by a popular etymology that makes sense only if the original eastern Middle Indic word **bāhaṇa* is inserted (Norman, 1980). Interestingly, the redactors composing the western version of the Aśokan inscriptions found at Girnar acted in a similar way by using *brā̆hmaṇa* instead of the genuine ancient Ardhamagadhi form of the Mauryan administrative language: *bābhana* or *bambhana* as preserved in other versions (von Hinüber, 2012a). The early intrusion and use of the very typical Brahmanic word *brāhmaṇa* into Middle Indic is confirmed by a coin from Sonkh near Mathura (1st cent. BCE; Härtel, 1993, 312) reading *bramamitasa* (of [the King] Brahmamitra), where *brama* (Skt. *brahma*) is a Sanskritic form, while *mita* (Skt. *mitra*) is clearly Middle Indic.

The Buddhists, however, went far beyond the hesitant attempts of the ancient Indian "linguists" at work in Girnar and began at an uncertain, but probably early, date to introduce also certain artificial forms only loosely based ultimately on Sanskrit. The best example is one of the endings of the absolutive, which ends in *-tvā* in Sanskrit and develops into *-ttā* in Middle Indic. In Pali the ending *-tvā* is reintroduced with traces of the original and genuine Middle Indic form remaining: *kattā* the rare variant of Pali *katvā* (having done), both derived from Sanskrit *kṛtvā*, was still known to the author of the *Samantapāsādikā* and to the even later commentator Dhammapāla (von Hinüber, 1982, 136). This conscious shaping of Pali continues in various forms over a very long period and is still visible in the early northern Thai manuscript tradition beginning during the late 15th and early 16th centuries (von Hinüber, 1988; 2013, no. 108). Sometimes, truly artificial forms such as the instrumentals *petyā* (by the father) and *mātyā* (by the mother) are generated, which have no basis in Sanskrit (*pitrā*/*mātrā*) at all but are formed by analogy within Middle Indic.

This process of developing Buddhist languages artificially is not confined to Pali alone. In two respects, the Pali word *disvā* (having seen) is particularly instructive, because it is an early artificial formation derived from epic Sanskrit *dṛśya* (Oberlies, 2003a, 284, § 9.7.2), which should have developed into **dissā̆* in Pali. However, when the regular Middle Indic absolutives, such as *kattā* (< Skt. *kṛtvā*), were converted to "semi"-Sanskrit forms, such as Pali *katvā*, **dissā̆* was also drawn into this process by mistake and changed into *disvā* instead of (correctly) keeping **dissā̆* as the common form of this absolutive besides the rare but regular *diṭṭhā* developing from Vedic Sanskrit *dṛṣṭvā*. The unusual phonetic shape of Pali *diṭṭhā*, however, protected this absolutive from being changed. Moreover, Pali *disvā* corresponds to Gandhari *diṣpa* (there are also absolutives in *-tva* in Gandhari), which not only underlines the high age of the shaping of Buddhist languages but also shows that languages of schools other than Theravāda are also based on the same old texts and share similar developments.

The high importance of Gandhari was for a long time more suspected than recognized from immediate evidence in Western linguistic research on Buddhist languages. The only Buddhist text known to be written in Gandhari was the *Gāndhārī Dharmapada* (renamed *Khotan Dharmapada* recently, since more versions of the same text in Gandhari surfaced). It was, however, recognized first, if vaguely, by the French sinologist P. Pelliot already in 1914 that some transcriptions of proper names in Chinese translations of Buddhist texts were based on northwestern Middle Indic forms, that is Gandhari, and not on Sanskrit (Pelliot, 1914, 407n4). This was further elaborated by E. Waldschmidt (1932, 231) without, however, referring to P. Pelliot. The importance of this discovery was confirmed during the last two decades, when, beginning in 1994, more and more fragmentary texts in Gandhari were recovered and edited (Salomon, 1999).

For a long time, Gandhari was attested mostly by epigraphic evidence, beginning with the northwestern inscriptions of Aśoka (see above). In the same way, as the number of manuscripts increased considerably, many new inscriptions gradually came to light in the recent past (1,079 inscriptions in Gandhari are listed in February 2015; gandhari.org/a_inscriptions).

A major obstacle to understanding Gandhari texts is the Kharoshthi script (see below), which has been used in the northwest since the time of Aśoka and is only badly adapted to the needs of Indic languages (e.g. long and short vowels are not distinguished, nor are geminates written). Therefore, the graphic representation of the language is generally inadequate.

Within Middle Indic languages, Gandhari, which is by no means uniform in itself (Fussman, 1989), holds an exceptional position because of a number of phonetic peculiarities, such as the spirantization of *-tha-* resulting in *tasagata* (Pal.; Skt. *tathāgata*), or a metathesis of liquids, such as Gandhari *dhrarma* corresponding to Sanskrit *dharma*, are unique in Middle Indic. These features are continued in the modern Dardic languages (von Hinüber, ^{2}2001, § 19), such as Gandhari *krama* derived from Sanskrit *karman* surviving as Dardic (Shina) *krom* (travail; Fussman, vol. II, 1972, 357). Gandhari is indeed the only Middle Indic language with an unbroken history traceable from the time of Aśoka until the present. The texts composed in Gandhari seem mostly, but not exclusively, to belong to the school of the Dharmaguptakas.

The use of Gandhari as a Buddhist language was discontinued by the year 500 CE. It remained unknown to the indigenous Indian grammarians, and consequently no ancient name was preserved. Therefore the British linguist H.W. Bailey coined the now generally accepted name "Gāndhārī" referring to the area where this language was once used (Bailey, 1946). The history of Gandhari and a survey of documents at present known to exist in this language are provided by R. Salomon (2007).

Although Gandhari does not fully share the artificial developments observed in Pali (see, however, Salomon, 2001), a large number of Gandhari texts represent the northwestern adaptation of very early Buddhist material as amply shown by texts running parallel in both these and other varieties of Buddhist languages. The same is true for Buddhist Sanskrit. Here, however, early Buddhist "linguists" faced quite a different problem, because they did not have to recast ancient eastern texts into a different, but linguistically similar, variety of Middle Indic thus moving, as it were, horizontally on the same level, but they were faced with a real change of language when converting Middle Indic into Sanskrit. However, instead of deciding to translate Middle Indic into a Sanskrit following the norms as laid down by Pāṇini, quite a different approach was chosen during the earliest phase, when the texts were only brought near to Sanskrit with many Middle Indic features preserved (Deshpande, 1994, 100f.). The method followed in this process was very similar to the way in which certain areas of Pali grammar and vocabulary were remade and developed from Middle Indic toward Sanskrit, but in Buddhist Hybrid Sanskrit, the redactors went much farther than in Pali. This can be observed in the comparatively few texts preserved in the original language, because in translations into Chinese or Tibetan, almost all linguistic peculiarities are lost. Only phonetic transcriptions in Chinese offer some limited help to trace the underlying Indic language.

As far as we can see today, only the members of the Mahāsāṃghika-Lokottaravāda school tried to keep their language as close as possible to Middle Indic when approaching Sanskrit. Consequently, a Middle Indic form corresponding to Pali *ahosi* (was), which is a genuine Middle Indic formation

see today, only the members of
-Lokottaravāda school tried to
e as close as possible to Middle
aching Sanskrit. Consequently,
m corresponding to Pali *ahosi*
enuine Middle Indic formation

without any immediate ancestor in Sanskrit but developed from the Sanskrit root-aorist *abhūt*, was transformed in texts such as the *Mahāvastu* into *abhūṣi*, a form alien to Sanskrit, instead of being simply translated into correct Sanskrit *abhūt* or any other form of the past, such as the Sanskrit imperfect *abhavat* or the perfect *babhūva*, all meaning "was." The Mahāsāṃghika-Lokottaravādins thus created a truly artificial form in producing *abhūṣi*, as such corresponding to the equally artificial forms *disvā* or *petyā* in Pali discussed above. This process of Sanskritization could not yet be properly understood when F. Edgerton wrote his still fundamental *Buddhist Hybrid Sanskrit Grammar and Dictionary* (1953). Therefore, F. Edgerton erroneously considered *abhūṣi* a trace of an underlying living Middle Indic language, from which he supposed Buddhist Hybrid Sanskrit to have developed (Edgerton, vol. I, 1953, § 1.92).

While *abhūṣi* is the result of creative grammatical thinking, other forms were converted wrongly out of ignorance, where words of the Vedic language were concerned that had fallen out of use and consequently were no longer understood. Thus the Sanskritization could result in phonetically correct, but semantically almost nonsensical, backformations. A good example is the Middle Indic (Pali) word *pabbhāra* (slope) based on the Vedic adjective *hvara* (bent, crooked), which does not survive in later Sanskrit as observed by T. Zachariae (1851–1934) as early as 1883 (von Hinüber, 2002, 158). Therefore, the Mahāsāṃghika-Lokottaravāda redactors were obviously unfamiliar with Vedic **prahvāra* (bent forward, slope) and consequently unable to retrace this correct Sanskrit correspondence. Instead, the word *pabbhāra* was replaced by the phonetically correct, but semantically fanciful, *prāgbhāra*, formed from *prāg* (turned forward) + *bhāra* (burden, mass, etc.), which, in spite of (or because of?) its somewhat "exotic" character, was accepted into the Mahāsāṃghika-Lottaravāda language. Similarly, the correct derivation and original meaning of the legal technical term *pārājika* based on the Vedic verb *parā + aj-*, "to drive away," probably originally belonging to the vocabulary of cattle keepers and therefore unknown to the Buddhist tradition, which sought a connection to *parā + ji-*, "to defeat" (*pārājika* > *pārājayika*), were found out by one of the pioneers of Western Buddhist studies, E. Burnouf, as early as 1844 and confirmed again by H. Smith in 1966 (von Hinüber, 1988, 3).

A third type of the problems faced when converting Middle Indic to Sanskrit is presented by those words that are ambiguous due to the phonetic development from Vedic Sanskrit to Middle Indic. Therefore, choices had to be made, which were not always easy, nor was the result always correct. In Middle Indic, the future Buddha is called *bodhisatta*, which allows two possible Sanskritizations as *bodhisatva* (on the orthography of this word, see Bhattacharya, 2010) or **bodhisakta*. Although the latter form is probably the correct one, and although the ancient Buddhists were well aware of this possibility, *bodhisatva* was preferred because of exegetical considerations in spite of considerable difficulties opposing any explanation of this compound according to the rules of grammar (von Hinüber, 2007, 387).

The language of the Mahāsāṃghika-Lokottaravādin school created by this process is called "Buddhist Hybrid Sanskrit" by F. Edgerton (von Hinüber, 1989b). Although this terminology is often criticized, other suggestions such as *ārṣa* (language of the *ṛṣi* [i.e. Buddha]), used by the ancient Buddhists themselves occasionally (see below), did not find universal acceptance, mainly because *ārṣa* is also used by the Jainas for their language and by Pāṇini for the language of the Veda (von Hinüber, 2012b, 243n1).

When comparing the process of Sanskritization in both schools, Theravāda (Pali) and Mahāsāṃghika-Lokottaravāda (Buddhist Hybrid Sanskrit), it is obvious that the principles applied are the same in both languages, although the degree of application is different and consequently also the results: Theravāda kept a Middle Indic form of their school language Pali, while Buddhist Hybrid Sanskrit moved much closer to Sanskrit.

Therefore, the linguistic basis from which both languages were created and shaped should have been the same. Words like Pali *isipatana migadāya*, the name of the famous deer park in Sarnath, where the Buddha delivered his first discourse, corresponding to Buddhist Hybrid Sanskrit *ṛṣivadana mṛgadāva* (and other forms) clearly form part of a very early Buddhist tradition and, consequently, originally belonged to the eastern language as an old eastern place name. Although the first part of this place name is explained traditionally as derived from *isi* (ascetic; Skt. *ṛṣi*) and the second either from *patana* (flying) or from *vadana* (face, speech), it has been demonstrated by C. Caillat (1968) that the ultimate basis of both Pali and Buddhist Hybrid Sanskrit is a linguistic form of the place name corresponding to a reconstructed Sanskrit **ṛṣya-vṛjana* (deer park), which, however, developed into **issavayana* in the early eastern Buddhist language. This reconstructed form of the place name shows that phonetic laws operated here, which are alien to both Pali and Buddhist Hybrid Sanskrit, such as the loss of intervocalic palatals (*vṛjana* > *viyana*) as pointed out already by S. Lévi (1912). This early "Buddhist Middle Indic" was used in the ancient texts, which were composed during the period of oral tradition in between the time of the Buddha and our oldest texts. Consequently, the early eastern language was different from all later Buddhist languages. How this inferred Buddhist Middle Indic relates to the language of the Buddha himself is impossible to determine.

While some phonetic features of the reconstructed Buddhist Middle Indic point to a rather advanced development, clearly further advanced than in contemporary western languages such as Pali, the eastern morphology, however, was more conservative. A considerable number of the aorist forms expressing past action is still preserved in Pali, which is thus again connected to the Vedic language, while other aorists are transformed by creating new forms such as *ahosi* discussed above. In younger Middle Indic languages, the aorist system is gradually given up, while a number of aorists is still preserved in Gandhari and less so in Ardhamagadhi. Only in Pali, even rare forms such as the reduplicated aorist can be traced buried under the cover of changes introduced by redactors, who no longer were familiar with this particular grammatical category. The same is true for the perfect. Both grammatical categories survive only in the very early language of verses, which often preserve ancient forms (von Hinüber, ^{2}2001, § 480 [perfect], 482 [aorist]).

Stylistic features typical of Buddhist Middle Indic are the combination of synonyms, such as Pali *isipatana migadāya*, where both words mean "deer park," as pointed out by H. Smith (1948, 33; see s.vv. "syn.," "tautol. cpd."; 1949, 1136, § 6.1.2.1f.), and the use of formulas particularly during the period of an oral text tradition. These formulas are mostly combinations of three or more words arranged in such a way that there is a string of near synonyms with an increasing number of syllables or that two words of the same number of syllables are followed by a longer one – for instance Pali *dubbaṇṇa duddasika okoṭimaka* (3+4+5; ugly, unsightly, bent down) or, for the second type, Pāli *jiṇṇa, vuḍḍha, mahallaka* (2+2+4; worn out, old, aged; Smith, 1948, 35; see s.vv. "wax. comp."; 1949, 1127, § 5.3.1). Sometimes, synonym compounds and formulas meet in combinations such as Pali *ākāse antalikkhe* (2+4; sky) or in *hantvā jhatvā vadhitvā* (2+2+3; having slain, killed, murdered). The high age of these formulas belonging at least partly to the linguistic level of ancient Buddhist Middle Indic is underlined by the vocabulary used. Some words occur almost exclusively in formulas such as *okoṭimaka* (bent down, of short statue?), and, consequently, their exact meaning remains doubtful, because their use is restricted to one particular context.

In later language, these formulas, which were used as a help to memorize texts during the period of oral tradition, were partly destroyed when they were transferred into Sanskrit with a reversal of phonetic developments such as Pali *paṇḍito viyatto medhāvī* (3+3+3; shrewd, clever, wise), which must be transformed in Sanskrit into *paṇḍito vyakto medhāvī* (3+2+3). An easy emendation could have saved the faulty rhythm by simply changing the position of the first two words **vyaktaḥ paṇḍito medhāvī* (2+3+3). This was not done, and it seems that there was a certain dislike of these formulas perhaps felt as being an outdated stylistic feature that should be avoided, as the formula found in the *Mahāparinibbānsuttanta* Pali (*paṭhavī*) *kampati saṃkampati sampavedhati* (3+4+5; D 2.108.11; [the earth] trembled, shook, moved), transformed into Sanskrit *mahāpṛthivīcālaś ca bhavati* ("and there was a big earthquake"; von Hinüber, 1994, 38). However, formulas were not systematically replaced, and further research is needed on their development in Buddhist Sanskrit. These examples may, at the same time, demonstrate how much insight into the development of Buddhist literature can be gained from linguistic and philological research (Norman, ^{2}2006) and from a close observation of the varying stylistic features used in different schools (von Simson, 1965; 1985; Allon, 1997).

Besides Pali, Gandhari, and Buddhist Hybrid Sanskrit, there were other Middle Indic languages used by different Buddhist schools. These are, however, for the better part very poorly attested. When a version of the *Dhammapada* found in a single manuscript retrieved as a photograph from Tibet and preserved in Patna was edited for the first time by N.S. Shukla in 1979 under the name *Patna Dharmapada* (edition: Cone, 1989), a new Buddhist language appeared, which is neither Pali nor Buddhist Sanskrit, but similar to both and somewhere in between. In contrast to Pali, the consonant groups in the *Patna Dharmapada* such as Sanskrit *putra* (son) are kept against Pali *putta*, and likewise is *pratiṣṭhitā* (PDhp 67b; "established") besides Middle Indic *pati-*° (also found in the *Patna Dharmapada*) against Pali *patiṭṭhita* (never *pra-* nor *-ṣṭh-* in Pali). However, the *Patna Dharmapada* keeps the Middle Indic form of the absolutive *dṛṣṭā* (the Pali parallel has *disvā*, Gandhari

dispa) corresponding to Sanskrit *dṛṣṭvā* in contrast to Pali *disvā*, which again is alien to *Patna Dharmapada*. It is very likely, as argued by P. Skilling (1997), that the language of *Patna Dharmapada* is the variety used in the Sāṃmitīya school.

Another similar variety different from but near to both *Patna Dharmapada* and Pali is attested in an inscription from Devnimori in Gujarat, in which *padicasamupādo* (Pal. *paṭiccasamuppāda*; dependent origination) and *avijjāpraccayā* (on the basis of ignorance) occur side by side (note *paḍī-* for Skt. *prati-* besides *-praccayā* from Skt. *pratyayād*). This brief text and a similar one found in Ratnagiri in Orissa, however, cannot be attributed to any particular Buddhist school (von Hinüber, 1985; Chowdhary, 2010).

These inscriptions underline that there were many more Buddhist schools that cultivated their own language as part of their identity. Candrakīrti quotes in his *Prasannapadā Madhyamakavṛtti* (7th cent. CE) a Middle Indic verse and attributes it to the Pūrvaśaila school (Harrison, 1982). This school is known from Prakrit (Middle Indic) inscriptions preserved in South India in Andhra Pradesh.

In the course of time, the preference for Middle Indic languages gradually diminished. The growing influence of Hinduism and consequently of Sanskrit as the leading literary language of Indian culture during the early 1st millennium induced Buddhists to follow this general development, and they began to create canonical texts in Sanskrit. In the field of literature, early Buddhist authors such as Aśvaghoṣa used excellent classical Sanskrit, while few traces of the original Middle Indic remain in the canonical language of the Sarvāstivāda and Mūlasarvāstivāda schools. The final change to Sanskrit is difficult to date. As the Vinaya of the Mūlasarvāstivāda school mentions the Kuṣāṇa ruler Kaniṣka, this text was closed at the earliest by the mid-2nd century or later. A Sanskrit version of the verses of the householder Upāli from the *Madhyamāgama* found in Central Asia shows traces of an underlying Gandhari, which might have been recast into Sanskrit by around 500 CE (von Hinüber, 1983a). This date, if correct, would concur with similar observations made in the Buddhist inscriptions from Ratnagiri (von Hinüber, 1985, 198). A surviving fragment from a Sarvāstivāda legal text in some sort of Buddhist Sanskrit (von Simson, 1985) allows tracing a development from Gandhari via Buddhist Sanskrit to (almost) classical Sanskrit in this school, which is perhaps shared by the Mūlasarvāstivāda school as well (Brough, 1962, 45; Schopen, 2009, 175b on *yava: yabha*).

In spite of the fact that a huge philosophical and exegetical literature was composed in classical Sanskrit, seen from the outside, the use of Middle Indic seems to have been felt as typically Buddhist for a long time. This is indicated by the drama *Mṛcchakaṭika* (The Little Clay Cart) written during the 3rd century (?) CE by the non-Buddhist author Śūdraka, who introduces a Buddhist monk speaking linguistically slightly comical verses in Magadhi. These verses, perhaps composed by Śūdraka himself, are at any rate the only Buddhist verses preserved in Magadhi (*Mṛcch.* 149 [VIII 1f.]).

This view on languages used in Buddhist literature can be supplemented by the ideas that the Buddhists themselves developed at a later date. The relevant Tibetan sources discussed by D.S. Ruegg (1985, 116; see also von Hinüber, 1989b, 354) attribute languages to Buddhist schools in the following way: Mūlasarvāstivāda, Sanskrit; Mahāsāṃghika, Prakrit (i.e. an unspecified Middle Indic); Sāṃmitīya, Apabhramsha (a late form of Middle Indic preceding the transition into the new Indo-Aryan languages); and Sthavira (i.e. Theravāda), Paishaci. The description fits the surviving texts of the Mūlasarvāstivādins, the Sarvāstivādins, and the Mahāsāṃghikas, if "Prakrit" is understood as the Middle Indic Buddhist Hybrid Sanskrit of the Mahāsāṃghika-Lokottaravāda texts. The language of the *Patna Dharmapada* attributed to the Sāṃmitīyas is rather remote from the very late Apabhramsha, which, however, is used in late Buddhist Tantric texts, such as the *Caryāgīti* composed in Old Bengali or Old Maithili (Kværne, 1986). The attribution of Paishaci to the Sthaviras is perhaps less problematic than it might seem at first sight. Very little is known of the Middle Indic literary language mysteriously called Paishaci ("[Language] of the Ghosts/Spirits") and used by the non-Buddhist author Guṇāḍhya (1st[?] cent. BCE) in his once enormously influential but lost collection of stories, the *Bṛhatkathā* (Great [Collection] of Stories). Paishaci is probably an old eastern Middle Indic perhaps even based on Buddhist Middle Indic and therefore not totally unlike Pali (von Hinüber, ²2001, § 101). Interestingly, the knowledge of the once very important Gandhari as the language of the early Buddhist mission to Central Asia and to China was completely lost even to this Buddhist tradition on languages.

It is remarkable that including Paishaci into the list might point at least to a vague knowledge of Pali in this most likely northern tradition. For, although Pali flourished in Ceylon and even spread to large areas of Southeast Asia, the presence of this language in North India is difficult to trace. There is a puzzling 8th-century fragmentary manuscript of the Theravāda *Vinayapiṭaka* in Pali surviving in Nepal and written in a northern script. Other Theravāda Pali texts, such as the *Vimuttimagga* (Path to Liberation), were known in North India and translated into Tibetan (Skilling, 1993). Moreover, there seems to have been an at times at least rather strong Theravāda connection to South India, where also other schools using different sorts of Middle Indic such the Pūrvaśailas flourished. South Indian Dravidian languages were also not alien to Buddhists, although it is impossible to tell which schools might have used Tamil (see article "Local Literatures: Tamil"). Moreover, it is impossible to decide if some epigraphic languages in South India are at least partly a continental variant of Pali (von Hinüber, 1985, 197).

While the use of Pali, and particularly Gandhari, can be attached to a more or less well-defined area – for Gandhari northwestern India and western Central Asia – this is impossible for Buddhist Hybrid Sanskrit or even more so for Sanskrit, which eventually was present everywhere in the Buddhist world.

In spite of the turn to Sanskrit, other languages continued to be used. The late commentary on the *Laghukālacakratantra*, Puṇḍarīka's *Vimalaprabhā*, provides a survey of languages used for different types of Buddhist scriptures beginning, of course, with (imaginary) Magadhi for the Tripiṭaka, continuing with Sanskrit, for example, for Prajñāpāramitā texts and *tantras* besides Middle Indic (Prakrit and Apabhramsha), before mentioning languages even beyond India such as the *bhoṭabhāṣā* (Tibetan language), *cīnabhāṣā* (Chinese), *pārasikabhāṣā* (Persian [or Iranian languages]?), and *suvarṇaviṣayabhāṣā* (the language of the Golden Land – most likely Southeast Asian language[s]) before stating summarily that there are no fewer than 96 languages used in Buddhist texts, which, however, are not enumerated (Vimalaprabhā, 1986, 41). Thus this text again demonstrates at a late date the deeply rooted multilingualism prevailing throughout the history of Buddhism right into modern vernaculars such as Nepali or Sinhala.

Different Buddhist languages were described by indigenous grammarians. There is a particularly rich grammatical tradition in Theravāda (Scharfe, 1977, 194f.; Pind, 2012) with the Burmese grammarian Aggavāmsa being the most influential. His *Saddanīti* (Guide [to the Correct Formation] of Words) completed in 1154 CE exercised a strong influence on the linguistic form of the manuscript tradition in Pali (Smith, 1928, VI). Moreover, there are also grammarians of Buddhist Sanskrit (Scharfe, 1977, 162–167), the oldest being the fragmentary Sanskrit grammar by Kumāralāta (manuscript fragments dating from the early 4th cent. CE; Lüders, 1930, 711f.), who also describes specific features of the language of the Buddhist canon, which he calls *ārṣa* (language of the *ṛṣis*), including also features of Buddhist Hybrid Sanskrit.

The only dictionary explaining Pali words is the *Abhidhānappadīpikā* (Illuminator of Words) ascribed to Moggallāna and supposed to be compiled in the late 12th century (Vogel, 1979, 313; see also Nandawansa, 2001). It is based on the Sanskrit dictionary by Amarasiṃha, who, very likely himself a Buddhist, wrote his highly influential *Amarakośa* (Dictionary of Amara) or *Nāmaliṅgānuśāsana* (Instruction on Nouns and Their Gender) perhaps during the 6th century CE (Vogel, 1979, 310). Lexicographic material (verses), which is even older than the *Amarakośa* is preserved in the commentaries to the Theravāda canon (von Hinüber 1998/2009). The *Mahāvyutpatti* (Great Analysis) is an encyclopedic Sanskrit-Tibetan dictionary of Buddhist technical terms and phrases conceived during the 9th century CE as an aid to standardize the Tibetan translations of Buddhist Sanskrit texts (Vogel, 1979, 381; Verhagen, 1994, 15f.).

Finally it should be noted that, when after a prolonged period of oral transmission Buddhist texts were committed to writing, the different languages were, and still are, written in a large variety of scripts. With the only exception of Gandhari written in Kharoshthi, a script running from right to left because it is derived from the Semitic Aramaic alphabet (Falk, 1993, 84ff.), all other scripts of ancient India, including also Tibetan and Southeast Asian scripts, are ultimately derived from Brahmi, introduced by Aśoka (on the written sources on the beginning of script, see von Hinüber, 1989a). While the meaning of "Kharoṣṭhī" is not clear, "Brāhmī" (i.e. the script [*lipi*]) means "script invented by the god Brahmā." Both names are taken from chapter 10 of an early biography of the Buddha, the *Lalitavistara*: when the Bodhisattva enters school, he already knows all 64 scripts, which are enumerated. The names "Brāhmī" and "Kharoṣṭhī" are found at the very beginning of this list. The exact meaning and reference of most of the names of scripts remain, however, obscure. Many, if not most, of them, such as "script of the *kiṃnaras*" or "script of the *asuras*," clearly belong to the world of fantasy.

Languages: Tibetan

Tibetan is a member of the Trans-Himalayan language family. Also known as Tibeto-Burman and Sino-Tibetan, this family includes Chinese, Burmese, Newar, Lepcha, Meithei, and several hundred languages without literary traditions; agreement prevails that Tibetan is on the family's Bodish branch (see fig. 1).

Tibetan enters history as the language of the Yarlung Valley, the cradle of the Tibetan Empire (Takeuchi, 2012b, 4). Together with the troops of this empire, the language colonized the entire Tibetan plateau, extinguishing the languages formerly used across that territory (Takeuchi, 2012b, 6). The use of Tibetan across and beyond the plateau at the height of the empire set the stage for its breakup into the spoken languages of today. Researchers often classify Tibetan languages into groups based on the provinces of Tibet in which they are spoken (Denwood, 1999, 23–36; Tournadre & Dorje, 2003, 28–32), but the identity of such geographic groupings with genetic groupings remains to be demonstrated (see Sun, 2003, 794–797). The monograph series Beiträge zur tibetischen Erzählforschung provides a good point of departure into the vast research on Tibetan dialects.

The Earliest Tibetan Literature

Paleographic analysis indicates that the Tibetan script derives from a late Gupta script as used in Nepal and northern India in the early 7th century (van Schaik, 2011; but also comp. Schuh, 2013). Although an often repeated legend avers that a writing system was developed with the express purpose of recording the Buddhist scriptures being imported from India, there is little doubt that during the empire's initial expansion, writing was introduced circa 650 CE to facilitate administration (Hill, 2010a, 111n4). A gap of about a century separates the invention of the alphabet and the earliest securely datable extant Tibetan documents. A stele inscription in front of the Potala Palace, known as the Zhol or Ngan lam Sri inscription (post-763 CE), is generally recognized as bearing the oldest sample of Tibetan writing (Hazod, 2010). However, a bell discovered circa 2010 in Dpa' ris in eastern Tibet may date to the earlier reign of Khri Lde gtsug brtsan (704–755 CE; Lha mchog skyabs, 2011). The capacity to inscribe writing on a cast bell implies significant prior familiarity with a writing system. Although the *Old Tibetan Annals*, representing the official version of imperial history, recorded as it happened, dates in part back to the invention of writing (Dotson, 2009, 10–11), the extant manuscript is probably postimperial (Iwao, 2012).

Two types of material date from the Tibetan Empire: inscriptions (Li Fang-Kuei & Coblin, 1987; Iwao *et al.*, 2009) and documents excavated at the Central Asian forts of Miran and Mazar Tagh (van Schaik, 2013, 119; Takeuchi, 1997–1998). Old Tibetan continued to function as a *lingua franca* of commerce and administration in the oasis cities of the Silk Road for some decades after the Tibetan Empire lost control of these territories in the 9th century (Uray, 1981; 1988; Takeuchi, 1990, 187–189; 2012a; 2012b, 7–9). Paper manuscripts preserved in the library cave of Dunhuang, sealed during the first half of the 11th century (Imaeda, 2008), generally date from this postimperial period. The documents from Dunhuang include historical texts, official documents, foreign literature in translation, divination

Also available online – www.brill

texts, and both canonical and noncanonical Buddhist texts. The most important collections of these documents are found now in London and Paris, with smaller collections elsewhere. The collections of both the Bibliothèque nationale de France (Lalou, 1939–1961) and the British Library (La Vallée Poussin, 1962; Iwao *et al.*, 2012) are partially catalogued; images and metadata for many are available on the website of the International Dunhuang Project (http://idp.bl.uk/), and transliterations of many are available at Old Tibetan Documents Online (otdo.aa.tufs.ac.jp). J. Dalton and S. van Schaik (2006) more recently recatalogued the tantric manuscripts of the British Library. Y. Imaeda *et al.* (2007) provide 65 well-known and well-studied Tibetan Dunhuang documents in transliteration with complete bibliographic references.

The Translation of Buddhist Texts

Begun already in the 8th century, the translation of Buddhist literature into the Tibetan tongue continues to this day. For example, Dge 'dun chos 'phel published his translation from Pali of the *Dhammapada* in 1946 (Chompel, 1946), and in 2010 'Bri gung skyabs mgon che tshang translated the second section of the Chan-related *Leng qie shīzī ji* (楞伽師資記; Records of the *Laṅkāvatāra* Masters) to augment the missing sections of an existing old Dunhuang version. The flow of texts also goes in the other direction; there is currently an ongoing project to translate Tibetan *sūtras* found in the Kanjur into Chinese (http://khyentsefoundation.org/2014/03/ddbc/), and the 84000 project (http://84000.co/) aims to translate the entire Kanjur into English. Nonetheless, the preponderance of translation work took place long ago. The bulk of non-tantric material was translated already during the latter part of the Tibetan Empire (c. 760–850 CE), and tantric materials were translated mostly before the decline of Buddhism in India in the 13th century.

Standardization and Language Reform in Translations of the Imperial Period

Important for an understanding of the language of Buddhist texts is the existence of a particular style of "Translationese," which characterizes most translations into Tibetan, not only from Indic language sources but also from Chinese and other languages. This style of language attempts at times to mechanically reproduce the syntax of its source, at the same time that it creates a vocabulary from Tibetan wordstock with which to render new ideas, terms, and concepts. There was, moreover, a self-consciousness to this process among the Tibetan scholars responsible for translation and editing of Buddhist literature. One example of this self-consciousness is the effort at standardization that was undertaken both to revise existing translations and to set parameters for new translation works. The colophons of revised early Tibetan translations refer to the language reform that resulted in a "new terminology." For example, the *Lalitavistara* was translated and corrected "in conformity with the decision relative to the new terminology" (*bskad gsar bcad kyis kyang bcos nas gtan la phab pa*; see Simonsson, 1957, 223n2; Scherrer-Schaub, 2002, 310n133). What this reform meant in terms of the daily practice of translators and editors remains unclear. The confused tale of reform is a story of three triples: three edicts, three treatises, and three catalogues.

The timing and import of the three edicts are subject to disagreement. For example, Bsod nams rgyal mtshan in the *Rgyal rabs gsal ba'i me long* (1368) explains that at the time of Khri Gtsug lde brtsan (r. 815–841), translation practices were standardized according to a "new terminology" (*skad gsar bcad*) following the prescriptions of three edicts (*bka' bcas rnam pa gsum du mdzad do*; Uray, 1989, 7; Sørensen, 1994), but Rin chen bkra shis in his *Li shi gur khang* (1536) separates each of the "edicts" from one another in time: the first is from the invention of the alphabet (c. 650 CE) until the reign of Khri Srong lde brtsan (742–800[?]), the second during the reign of Khri Gtsug lde brtsan (r. 815–841), and the third from the time of Rin chen bzang po (958–1055) until the time of Dharmapālabhadra (1441–1526; see Taube, 1978, 173–174). Relying on the oldest available primary sources, C. Scherrer-Schaub (2002) concludes that the dating of the first edict is uncertain, the second edict was issued probably in 783 CE (but possibly in 795), and the third edict appeared in 815 CE. It seems that the third edict was essentially a renewal of the second, and the first edict could be a retrospective invention, part of the public-relations efforts of Khri Srong lde btsan to present the national conversion to Buddhism as a renewal of the efforts of his ancestor Khri Srong brtsan (605[?]–649).

Three lexicographical works assisted the authorized work of translating Buddhist texts and revising earlier translation: the *Bye brag tu rtogs byed chen*

po (*Mahāvyutpatti*), the *Bye brag tu rtogs byed' bring po*, and the *Bye brag tu rtogs byed chung ngu*. The second work is better known under the title *Sgra sbyor bam po gnyis pa*. The third work is no longer extant. The two extant works were in circulation at least by 814 CE (Uray, 1989; Panglung, 1994; Scherrer-Schaub, 2002; Hermann-Pfandt, 2008).

As the work of translation progressed, it became necessary to keep track of the completed translations. Three catalogues aided in this purpose, *Lhan kar ma*, *'Phang thang ma*, and *Mchims phu ma*, reflecting respectively the collections held at the imperial residences of Lhan kar, 'Phang thang, and Mchims phu. The *Mchims phu ma* is no longer extant. The exact dating of the catalogues is controversial – G. Halkias (2004) and B. Dotson (2007) date the *Lhan kar ma* to 824 CE, and the *'Phang thang ma* to 842 CE, whereas A. Hermann-Pfandt (2008) dates them respectively to 812 and 806 CE.

N. Simonsson (1957) remains the seminal study comparing Sanskrit originals with early and later translations of the same text as a window into the ateliers of translators and revisers. However, his detailed study has not yet been followed up by enough subsequent research to yield a coherent overall picture. Because no available Tibetan Buddhist text is securely datable to before 783 CE, even an exhaustive diachronic study of Tibetan translations may fail to shed light on the effects of the reforms associated with the "new terminology." While later Tibetan writers, such as the aforementioned Rin chen bkra shis, place all of those linguistic features now associated with "Old Tibetan" into the period before the first edict (Taube, 1978, 173–174), this view is not correct. These features are pervasive in Dunhuang texts and other materials that postdate the Tibetan Empire (see Tropper, 2010, 17), and the occasional old feature, such as *la stsogs pa* instead of *la sogs pa* (generally "et cetera"), is found even in the 18th-century Derge Kanjur (comp. D 341, mdo sde, a, 138a5).

The translation of such a large volume of Buddhist works, mostly from Sanskrit, required the redeployment of inherited vocabulary to Buddhist ends and the coining of new terminology. Many existing terms received new interpretations or new associations. For example, the word *mdo* originally (and frequently still) refers to a place where roads or rivers meet. This word was then apparently used as a metaphor for a text in which various points were brought together – used in this sense, for example, in the term *mjal dum gyi mdo chen po* (great treaty accord) in the east face of the Sino-Tibetan treaty inscription of 821/822 CE, which stands in front of the Jokhang Temple in Lhasa. From that metaphorical use, it was only a small step to use *mdo* as a calque of Sanskrit *sūtra*, the discourse of the Buddha. However, the word *mdo* is not a literal translation of *sūtra*, which means "thread," "string," and so forth. In other cases terms were carefully calqued on the Sanskrit original, thus Sanskrit *tathāgata* ("thus-gone") became Tibetan *de bzhin gshegs pa* ("thus gone"). For example, the Sanskrit word arhat, which derives from the root *arh-*, "to be worthy," is translated in Tibetan as *dgra bcom pa* ("one who conquers the enemy"), utilizing a traditional Indian idea that arhat is formed from the noun *ari* (enemy) and the root *han-* (to slay). Although such neologisms may be based on historically incorrect etymological analyses, in the vast majority of cases, it is demonstrable that the etymologies on which the translation equivalents were created are found deployed in Indian Buddhist literature, and thus represent traditional Buddhist interpretations of important terms (Simonsson, 1957, 269–270; Verhagen, 2001, 67–69, 75).

Reading "According to Context"

One often encounters the claim that the elaborate inflectional categories of Sanskrit allow for a greater reliability and precision in the interpretation of Sanskrit Buddhist texts, whereas in Chinese and Tibetan, one must "rely on context" to know who is doing what to whom. It is, however, merely a greater familiarity with Sanskrit grammar as opposed to Tibetan grammar and a comparative lack of research into Tibetan that leads to such an impression.

Despite the fact that Tibetan translations from Sanskrit, which make up the vast majority of translated Buddhist literature, often allow a rather close reconstruction of both the word-stock and syntax of the underlying Sanskrit source text, the Tibetan system of case marking is quite different and rather incompatible with that of Sanskrit. Tibetan distinguishes ten cases:

1. absolutive: Ø;
2. agentive: *-kyis* (~ *-gyis, -gis, -yis, -s*);
3. genitive: *-kyi* (~ *-gyi, -gi, -'i, -yi*);
4. allative: *-la*;
5. locative: *-na*;
6. terminative: *-tu* (~ *-du, -ru, -su, -r*);
7. ablative: *-las*;

8. elative: *-nas*;
9. associative: *-dang*; and
10. comparative: *-bas* (~ *-pas*; Hill, 2012).

Tibetan does not mark case on each individual word as does Sanskrit but instead only once at the end of each noun phrase (*Gruppenflexion*). The incompatibility of the grammatical structures of the two languages has led to confusion both within the Tibetan grammatical tradition and in the study of Tibetan in modern academia. As Tibetan distinguishes ten cases, two more than the eight cases of Sanskrit, one cannot claim that in this regard Tibetan is by nature less precise than Sanskrit.

Tibetan is a so-called ergative language. From the perspective of European grammar, this means that in intransitive clauses, the "subject" is in the absolutive case, but in transitive clauses, the "subject" is in the agentive case and the "object" is in the absolutive case. Thus, the case alignment of Tibetan transitive clauses is superficially similar to passives in European languages (Schmidt, 1839, 61; Schiefner, 1855, 418; von der Gabelentz, 1861, 472; Giraudeau, 1916, iv; Tournadre, 1996; Vollmann, 2008). Restating these case uses from the Tibetan perspective, the absolutive is used for the single nominal argument of an intransitive clause (*ngus pa'i mchi ma Ø char bzhin du bab nas* : "the tears of [their] weeping fell like rain"; D 341, mdo sde, a, 132a1–2) and the patient of a transitive clause (*ngas de dag kun Ø bsad nas*: "I killed them all"; D 341, mdo sde, a, 169b1), whereas the agentive is used for the agent of a transitive clause (*bcom ldan 'das* kyis *chos bstan pas*: "the Bhagavān taught the dharma"; D 341, mdo sde, a, 153b2). The agentive also marks instruments: *bcom ldan 'das kyis utpal sngon po dang 'dra ba shin tu rno ba'i ral* gris *sha bcad cing*: "The Bhagavān cut flesh with a very sharp sword like a blue *utpala* lotus"; Bailey, 1951, 42).

A Tibetan verb consists of four monosyllabic stems: present, past, future, and imperative (Hill, 2010b). Not all verbs separately distinguish the four stems (e.g. *gshegs*, " to go," has only one form); those that do distinguish all four do so in a complicated way involving ablaut, prefixes, and suffixes (e.g. *gsod, bsad, gsad*, and *sod*, "to kill"; *za, zos/bzas, bza'*, and *zos*, "to eat"); these morphological processes are complex and opaque (Hill, 2010b; 2014). Although broadly speaking the names of the four stems do say something about their use, their meaning and function is also poorly understood (Zeisler, 2004; for a study of the verb forms in Sanskrit and Tibetan as used in the *Bodhicaryāvatāra*, see Taube, 1953–1954).

Although Tibetan lacks person agreement, other means do much the same work in making explicit who is doing what. The modern Tibetan languages are well known for encoding the source of information by which a speaker has come to know of what he or she says (Tournadre, 1996; Hill, 2013c), and such evidential systems have been characteristic of the language from an early period (Takeuchi, 1990, 12; 2012b, 11–12; 2015, 410; Hill, 2013b). Similarly, clause-marking morphemes are not well understood; there are many options, *-na, -nas, -te, -cing, -pa-la, -pa-las, -pa-dang*, and *-pas*, all of which mean something like "then" or "and." These suffixes appear to distinguish whether or not the subject changes from one clause to the next (Zadoks, 2002; Haller, 2009). Increasing scrutiny of Tibetan grammar will no doubt lead to an appreciation for the refinement of the structure of the Tibetan language and yield new insights into and better understanding of Buddhist canonical literature.

The Tibetan language has a refined system of honorific terminology, in which certain vocabulary items replace others when used, for instance, of the Buddha or an honored teacher. This applies equally to nouns, adjectives, and verbs. An example of this is the variety of verbs that all can be translated as "to speak"/"to say": *smra ba/lab pa* conveys a neutral stance with regard to the person who speaks or is spoken to; *gsung ba* indicates that the speaker is someone who is highly regarded by the person who reports this act; *zhu ba* marks that the person addressed is considered to be of high standing, while giving lesser importance to the speaker himself. The latter category is often found in the first person. These three different levels of honorific verbs are less systematized in the earliest Tibetan literature but soon after became very common in written and spoken Tibetan alike (Kitamura Hajime, 1975; Takeuchi, 1987; DeLancey, 1998).

In overall sentence structure, there is a tendency for translations to maintain a syntax that attempts fidelity to the original; these in many cases might be called calques, both in their syntax and in the formation of their vocabulary. This can lead to shorter sentences than would be expected in native Tibetan, usually terminated by final particles (e.g. in the case of the copula, *yin no*). A clear instance of the artificiality of translations is the precise calquing of Sanskrit preverbs in Buddhist neologisms. For example, *rab tu 'byung ba* at face value in Tibetan means "to emerge thoroughly," but is used to mean "to take ordination" with Sanskrit *pravrajyā* as a model (comp. Inaba Shōju, 1954, 101–105; Dimitrov, 2007).

954, 101–105; Dimitrov, 2007).

In contrast, original Tibetan compositions tolerate extremely long sentences that make use of extensive subordination and generally eschew final particles. While the vocabulary of Buddhist texts composed in Tibetan generally follows established translation equivalents for technical terms (in contrast to the nonreligious literature of legal documents, contracts, etc., which tends to innovate or borrow terms from neighboring languages such as Chinese, Mongolian, or Manchu), a hallmark of this style is an extensive use of clipping (a common pattern abbreviates phrases with an AB-CD structure as AC, such that *thal rang* stands for *thal 'gyur ba* and *rang rgyud pa*, i.e.*Prāsaṅgika and *Svātantrika), as well as the coining of new terminology for concepts not present in the inherited Indic tradition.

Comparable with the syntactic divergence witnessed in translations versus indigenous compositions, there is a large difference between the syntax of prose versus that of verse or poetry. Due to strict restrictions on the syllable length of lines, extensive compounding in the latter often leads to the omission of relational morphology. An example is *khrag 'thung dam can rgya mtsho* ("blood-drinking-guardian-ocean"; de Jong, 1959, 119) where in prose one might have expected *khrag 'thung ba'i dam can gyi rgya mtsho* ("ocean of guardians who drink blood"). This phenomenon has received scant attention. Another understudied area of Tibetan poetry is metrics (Poucha, 1950, 1954; Vekerdi, 1952). Tibetan does not allow reproduction of the often complex meters of Sanskrit verse, and in place of Sanskrit heavy and light syllables, Tibetan verse utilizes stressed and unstressed syllables. Translators, therefore, although not in an always unified or systematic manner, attempted to reproduce variations in Sanskrit meters by varying the length of the lines of Tibetan verse. An aspect of Tibetan prosody that should not be overlooked is the increasing poeticization of Tibetan prose that begins in the second half of the 13th century, under the influence of the Tibetan translation of Daṇḍin's *Kāvyādarśa* (Mirror of Poetics; see Tucci, 1949, 104; van der Kuijp, 1996), a process in which increased awareness of Indian norms of poetics more or less directly shaped developing Tibetan styles of composition.

Language Change

Like all languages, Tibetan continuously changes. As an example, although modern pronunciation of Tibetan is related to orthography in complicated ways, reading out Tibetan in transliteration, with its plethora of consonants, giving value to each element, well approximates the language's sound during the early imperial period; dialects such as Balti, spoken in areas remote from the political center, provide evidence of such pronunciations by maintaining complex onsets (e.g. Balti *bzhi*, "four"; see Sprigg, 2002, 38). Nonetheless, in a few places, orthography misleads – that is, the entire initial cluster agrees in voicing, and finals are voiceless (Hill, 2010a). Thus, *bsgrub* was pronounced [bzgrup], and *bskal* was pronounced [pskal]. In contrast, a reasonable approximation to the pronunciation of these syllables in the speech of Lhasa today would be [trup L] and [kää H] (where L and H represent "low" and "high" tones). The system of personal pronouns offers a second example of language change (Hill, 2007; 2010d; 2013a). In Early Old Tibetan of the 8th and 9th centuries, the respectful use of the plural *khyed* for a singular (*pluralis majestatis*) is absent, but by the advent of Classical Tibetan one or two centuries later, this usage was in place (Hill, 2013a).

Grammars and Dictionaries

S. DeLancey (2003) provides a short overview of Classical Tibetan grammar. P. Schwieger (2009) offers the best reference grammar, but K. Gyurmé (1992) is also profitably consulted. Generations of Tibetologists began their study of Tibetan with M. Hahn's *Lehrbuch der klassischen tibetischen Schriftsprache* (1994), and C. Sommerschuh's *Einführung in die tibetische Schriftsprache* (2008) provides an excellent more recent alternative (comp. Hill, 2010c). Inaba Shōju (1954) offers a detailed comparison with Sanskrit grammar.

The single most impressive work of Tibetan lexicography is the ongoing *Wörterbuch der tibetischen Schriftsprache* published by the Bayerische Akademie der Wissenschaften (Francke *et al.*, 2005ff.). Each entry gives copious citations of original sources precisely cited to page and line number. The use of previous dictionaries is carefully distinguished from the evidence of textual attestations. In addition, thorough reference to previous scholarship is given when relevant. Especially so long as this work remains incomplete, several other resources are also valuable. H.A. Jäschke (1881) wrote a lexicographical work of the highest standard that is still important today. Lokesh Chandra compiled a 12-volume Tibetan-Sanskrit dictionary on the basis of canonical Buddhists texts available in both languages (1958–1961), continued with seven supplementary volumes (1992–1994) and a one-volume Sanskrit-Tibetan index (2007). J.S. Negi (1993–2004) compiled another 16-volume Tibetan-Sanskrit dictionary. It includes extensive quotations in addition to citations and makes reference to a larger number of texts than does Lokesh Chandra's. In addition, there are bilingual indices available for a number of Tibetan translations of Sanskrit Buddhist texts, including the *Abhidharmakośabhāṣya* (Hirakawa, 1973–1978), *Bodhicaryāvatāra* (Weller, 1952–1955), *Kāśyapaparivarta* (Weller, 1933), *Mahāyānasūtrālaṅkāra* (Nagao, 1958–1961), *Meghadūta* (Chimpa *et al.*, 2011), *Nyāyabindu* (Obermiller, 1927–1928), *Prasannapadā Madhyamakavṛtti* (Yamaguchi, 1974), *Yogācārabhūmi* (Yokoyama, 1996), *Laṅkāvatārasūtra* (Suzuki, 2000), *Sukhāvatīvyūhasūtra* (Inagaki, 1984), and *Saddharmapuṇḍarīkasūtra* (Ejima *et al.*, 1985–1993). Ngag dbang tshul khrims (1997) provides a dictionary of difficult or archaic words, drawing heavily on Tibetan commentarial literature. This work provides attestations and cites the works in which they are found, but it does not specify page and line numbers and has an inadequate bibliography; consequently, these citations are not easily verified. The most widely used Tibetan dictionary is Zhang Yisun's (1985).

Languages: Central Asian Languages

The following survey covers several languages that reflect the spread of Buddhism from India to the north, that is, to Iranian-speaking territories of present-day Pakistan, Afghanistan, eastern Iran, and Transoxiana, and to Chinese Turkestan, in present-day Xinjiang, and finally to the interior of China and the steppes of Mongolia, roughly from the last centuries before the Common Era until the 15th century CE. These languages belong to different linguistic families: Middle Iranian and Tocharian languages are two separate branches of the Indo-European language family, while Old Turkic (alternatively Old Uighur) is the earliest representative of the Turkic language family. For the most part, those languages were totally unknown or only indirectly recorded before the discoveries of manuscripts, inscriptions, and artifacts of Buddhist culture made in eastern Turkestan and more widely in the whole Serindia from the 1890s onward, and especially during the early 20th century. Due to the amount of documentation and its partly fragmentary nature, a thorough description of these languages by way of grammars and dictionaries is still in progress, all the more so because of the constant advances through new findings in the same area.

Iranian Languages

Buddhist texts are attested in several Middle Iranian languages: Bactrian, Sogdian, and two varieties of Saka, Khotanese and Tumshuqese. All these languages belong to the northeastern dialectal branch of Iranian languages (Sims-Williams, 1989; Schmitt, 2000, 43–65). They use different writing systems.

Our knowledge of the Bactrian language has made much progress since the still useful surveys given by G.D. Davary (1982) and N. Sims-Williams (1989), due to discovery in the 1990s of documents on leather belonging to the royal archives of Rōb (modern Ruyi, province of Samangan, to the north of the Hindukush, in present-day Afghanistan) and dated from the 4th century onward. The edition of this material by N. Sims-Williams (2000–2007) contains an updated survey of the grammar, a glossary, and a reverse index. On the whole, the available Bactrian sources range in date from the period of the Kushan Empire (1st–3rd cents. CE) to early Islamic times (8th–9th cents. CE). For their coins and monumental inscriptions, the Kushan kings decided to use the Greek alphabet of Bactria's former Greek rulers with one additional sign (þ) to note the fricative š, the so-called Graeco-Bactrian script. The rectangular shape used during the Kushan era was succeeded later by a cursive script. The major inscriptions of this period, from Rabatak (Kaniška I), found in 1993 (Sims-Williams, 2008), and Surkh Kotal (Huviška), found in 1957 (Gershevitch, 1966), do not show any specific Buddhist features. There are very few extant Buddhist texts in Bactrian, and those that exist are of a relatively late date. However, the Kushan rulers, as much as their predecessors in the same region, supported and sponsored Buddhist communities, as shown by the testimonies of Buddhist art and architecture, as well as the activities of the Sarvāstivādin school in the northwest. Among the so-called Hephthalite Bactrian fragments of manuscripts from the Berlin collection, some contain nouns borrowed from Sanskrit and are probably of Buddhist content (Gershevitch, 1967, 37–56). In addition, two fragments of a leather manuscript of the Schøyen collection, in cursive Graeco-Bactrian script, dated presumably around 5th century CE, contain names of some buddhas pointing to the Pure Land school of Buddhism (Sims-Williams, 2007, 176–177). Moreover, there is evidence for the impact of Bactrian on several languages of Central Asia (Khotanese Saka, Prakrit of Kroraina, and Common Tocharian), through loanwords, the borrowing of which was simultaneous with the spread of Buddhism and Indian culture in the Tarim basin under the Kushan domination. In addition, the symbiosis of Bactrian and Indian culture is reflected by the large number of proper names of Indian, and especially Buddhist, origin (see Sims-Williams, 2010).

Documents written in Sogdian, which range in date from the 2nd until the 11th century CE, are of very different types: inscriptions, graffiti, legends on coins, secular documents, and religious texts – the last named belong to the three different religions that were adopted by the diverse Sogdian diasporas that developed in the Tarim basin, the

Turfan region, and China, namely Buddhism, Manichaeism, and Christianity. Except for a few fragments of texts translated from Sanskrit, either of Buddhist or of medical content, which use the Brahmi script of North Turkestan, most Sogdian inscriptions and manuscripts use a script that derives from the Aramaic script introduced in Sogdiana during the Achaemenid period (550–330 BCE). This Sogdian script, while being used for all kinds of texts, is the only one employed for secular documents and Buddhist texts, some of them featuring a more formal variety. Moreover, the Sogdian writers of Manichaean and Christian confessions used two different varieties of scripts, Manichaean and Syriac, which are also derived ultimately from the Aramaic script. There is as yet no comprehensive grammar of Sogdian including the three varieties, Buddhist, Manichaean, and Christian. The best up-to-date orientations on the Sogdian language are given by N. Sims-Williams (1989) and Y. Yoshida (2009). Besides the glossaries added to the editions of several texts, a working tool is provided by the dictionary authored by B. Gharib (1995), to be complemented and corrected with the help of further studies. The Sogdian personal names are covered by N. Sims-Williams (1992) and P.B. Lurje (2010). The examples of Buddhist literature in Sogdian have not been found in Sogdiana proper, but farther east, in Dunhuang and in the Turfan region: during the most powerful period of the Tang dynasty, in the 7th–8th centuries CE, some Sogdian groups were converted to Buddhism under the influence of Chinese Buddhists, and they produced many Buddhist texts (surveys by Utz, 1978; Dresden, 1983; Walter, 2006). These texts are for the better part translated from Chinese originals, and, consequently, seem to attest a highly literary language, if compared with other varieties of Sogdian. They mirror in content the Buddhist literature in Chinese of that time, although some of them have no exact match in the extant Chinese Buddhist canon. A few texts may derive from non-Chinese originals, either in Sanskrit or Tocharian. Some pieces may reflect Sogdian retellings of Buddhist narratives, rather than translations (see e.g. Durkin-Meisterernst, 2009). The identification and edition of further fragments of Buddhist texts in Sogdian is still in progress (bibliography in Lurje, 2010). Despite the wide area of diffusion of the language, the evident differences that can be observed among the various texts are more often chronological or orthographic than dialectal.

An Iranian people, the Sakas formed the ruling class in Khotan (Chn.; previously Yutian [于闐], nowadays Hetian [和田]), the capital of the most powerful kingdom of southern Chinese Turkestan, on the southern branch of the Silk Road. The population of the city and the region included both Indian and Chinese colonies. Their conversion to Buddhism happened during the first centuries of the Common Era, as testified by Chinese sources. By the 4th century CE, Khotan was a center of considerable importance for the study of Mahāyāna. Numerous texts have been translated into Khotanese from Sanskrit, which was considered there the sacred language of Buddhism. There are also original compositions in Khotanese Saka, both of Buddhist and of tantric inspiration, in addition to a large number of profane documents (Emmerick, 1992; Skjærvø, 1999; 2002). The designation of the language is based on the term *hvatana* (i.e. Khotanese), which the authors of texts used themselves. There is not yet any comprehensive grammatical description of Khotanese. The best orientation is given by the surveys provided by R.E. Emmerick (1989; 2009) and by the monographic studies of the verbal system and the nominal inflection given by R.E. Emmerick (1968). The meritorious and pioneering dictionary by H.W. Bailey (1979) is based on transcriptions and interpretations of manuscripts that are partly obsolete. It does not cover borrowings from Sanskrit or Middle Indic that are quite numerous. The revision of the Khotanese lexicography is in progress, thanks to the studies by R.E. Emmerick and P.O. Skjærvø (1982–1997; Emmerick, 1989) and by other scholars (Emmerick & Maggi, 2005).

Another Saka language, closely related to Khotanese Saka but more archaic, is known from documents found in Tumshuq, in an oasis north of the Taklamakan Desert on the northern branch of the Silk Road. Altogether more than 50 Tumshuqese documents are known, of which about 15 have been identified and edited. Most of them are secular documents, of legal or economic content, except for one, which is probably from a Manichaean community. Moreover, there are several significant Buddhist documents: an extract from a *Karmavācanā* text (P 410), fragments of Buddhist legends (*Araṇemijātaka*, *Haṃsasvarajātaka*), and a piece from an unidentified literary text. The *Karmavācanā* text has been studied in depth (Emmerick, 1985; Skjærvø, 1987), and evidence suggests that it has been translated from Tocharian B (Schmidt, 1988). The name

sts that it has been translated
(Schmidt, 1988). The name

Tumshuqese has been proposed for the language by R.E. Emmerick (1985), in order to differentiate conveniently this form of Saka from the Khotanese Saka, often simply called Khotanese. Nevertheless, Tumshuq (based on a Turkic noun) was not the name of the area at the time of the documents. In the dating formula of one secular document, the name of a certain king is preceded by an adjectival form now read as *gūẓdiya*, which presupposes a toponym *Gūẓdik. This would correspond to the name Jushide (据史德), attested for the main city of this area in Chinese records of the Tang dynasty, also known as Gus tik in Tibetan documents (Maue, 2004; Rong Xinjiang, 2005). This may have provided the name of the language, but it is not yet definitely proven by colophons.

Khotanese and Tumshuqese are written in different varieties of (Indian) Brahmi script of the Gupta type as transferred and adapted in the Tarim basin, respectively South Turkestan Brahmi for Khotanese and North Turkestan Brahmi for Tumshuqese. In fact, the script used for Tumshuqese has been borrowed from the North Turkestan Brahmi used for Tocharian B (see below), with some additional signs.

In addition to the rich documentation available in the Central Asian languages known through Buddhist texts, one can assume that, starting in the 3rd century BCE, Buddhism extended toward other Iranian-speaking communities in northern regions, from which no written Buddhist text survives. This is the case with Parthian, which constitutes, together with the closely related Middle Persian, the western branch of Middle Iranian languages, while the languages covered so far belong to the northeastern branch (Sundermann, 1989; Skjærvø, 2009). The Parthian language is attested in inscriptions of the Arsacid (247 BCE–224 CE) and Sasanian (224–651 CE) periods and in Manichaean texts found in the Turfan region. As the official language of the Arsacid Empire, it came to be used also in the east of Iran, in Margiana and Aria, where the Parthian state bordered the Kushan Empire. Archaeological evidence and external testimonies make it likely that Parthian speakers there were reached by Buddhist missions around the turning of the Common Era. They soon became conveyors of the Buddhist faith. In the 2nd and 3rd centuries CE, some Parthians whose names are recorded were active in China among the first translators of Buddhist texts. There was then ample opportunity for the borrowing of Indian, mostly Buddhist, vocabulary into the eastern form of Parthian as reflected by the Manichaean texts, which date back to the 3rd century CE. The majority of Indian words in Parthian are derived from Gandhari and only a few from Sanskrit. Some of them have been transmitted to other Iranian languages, such as Middle Persian or Sogdian, and from the latter to Old Turkic (Sundermann, 1982; Sims-Williams, 1983).

Tocharian Languages

Tocharian is the conventional name given to two different, albeit closely related, languages that belong to a separate dialectal branch of the Indo-European language family. These two languages are derived from a single original Common Tocharian (or Proto-Tocharian) but so deeply diverged that they were mutually unintelligible at the time of the attested manuscripts, as much as present-day English and Swedish, two languages derived from Proto-Germanic. Some fragments of manuscripts came to light in the 1890s, but the wide majority of written documents were found by the archaeological expeditions organized by different countries (British, German, French, Russian, and Japanese) in the first two decades of the 20th century; later findings are due to Chinese archeological teams, from the 1920s onward. The findspots are all located at the northern border of the Taklamakan Desert, in the Tarim basin, along the northern branch of the Silk Road, in present-day Xinjiang, China. Roughly three major zones are identifiable by names of oases that cover actually several separate sites of Buddhist remains: around Kucha in the west, through Yanqi (ancient Agni; Uig. Karashahr), to Turfan (ancient Khocho; Chn. Gaochang) in the east.

At the time of the decipherment (1908) of these manuscripts, written in a language completely unknown and brought by the first German (Prussian) expeditions, Emil Sieg (1866–1951) and Wilhelm Siegling (1880–1946) identified two different varieties of the language, which they named "Tocharian," with the noncommittal designations A and B. In fact, manuscripts in Tocharian A were found exclusively in the areas of Yanqi (precisely Shorchuk) and Turfan, whereas manuscripts in Tocharian B were found in all areas, and in large numbers around Kucha, to the west. There is also some evidence that Tocharian B was used farther west, around Maralbashi, and precisely in the Buddhist site of Tumshuq, at least because one Buddhist text in Tumshuqese Saka is actually a translation from Tocharian B (see above). This explains the inaccurate terms "East-Tocharian" (*Osttocharisch*) for Tocharian A and "West-Tocharian" (*Westtocharisch*), alternatively "Kuchean" (*koutchéen*), for Tocharian B, but such traditional designations are bound to a hypothesis about the eastward expansion of the latter, which, however, is not confirmed by any independent evidence. It is therefore preferable to use the neutral names Tocharian A and Tocharian B. In addition, some traces of an older language of the same family, which would differ both from Tocharian A and Tocharian B, are attested in the local substrate of the business and legal documents, dated to the 3rd century CE, of the Kroraina (Shan-shan) Kingdom, around Niya on the southern branch of the Silk Road, which use a variety of the Gandhari language, the so-called Niya or Kroraina Prakrit (see also Burrow, 1937). The coining of the name "Tocharian" (*Tocharisch, tokharien*) rests on the speculative interpretation of the name written in Uighur script *twqry*, read *toχrï* (now transliterated as *tohrı*), which refers in colophons to the language of the Buddhist drama *Maitreyasamitināṭaka*, originally written in Tocharian A, and translated (around 9th cent. CE) in Old Turkic (Uighur) under the title *Maitrisimit nom bitig*. This language name was connected by Emil Sieg and Wilhelm Siegling to the name of the people of Tokharistan (Bactria, upper Indus), known under various forms (Skt. *tukhāra*; Grk. *Τόχαροι*; Lat. *Tochari*; Chn. *duhuoluo* [覩貨羅] – one of several variants). This has proven false with the discovery of inscriptions that attest to the language of the Kushans, which is Middle Iranian, and now called Bactrian (see above). Besides *twγry* (according to Manichaean orthography) as the name of Tocharian A, several Uighur texts refer presumably to Tocharian B by the name *kwys'n* (often preceded by an obscure, non-Turkic word as *'wkw kwys'n*), which ought to be read *küsän*, instead of *küšän*, although the latter reading has been supposed to point to the name of the Kushans (Mid. Pers. *kwš'n*; Pkt. *kuṣaṇa, kuṣāṇa*, etc.; Bact. κοϸανο). It is more likely that Uighur *küsän* has been borrowed from the Tocharian A match of Tocharian B $\underset{u}{k}$*śiññe* ("Kuchean, from Kucha"), which is attested as part of the title of Kucha's kings. The reading of *'wkw* is quite uncertain, but among the possibilities, *oku* would allow a further connection with Tocharian A. It is likely that Tocharian B $\underset{u}{k}$*śiññe* referred also to the local language in manuscripts and inscriptions found near Kucha; it is an adjective derived from a variant of the ancient name of Kucha, that is *kuci* in Sanskrit texts, besides *kutsi* (with dental voiceless affricate) known through the oldest Chinese transcriptions. In addition, in texts in Tocharian A, the local language of Yanqi (ancient Agni) appears to be designated by *ārśi*, which refers also to the country. In conclusion, neither the external (Sanskrit, Old Turkic, and Chinese) evidence nor the few internal references to languages in Tocharian texts speak in favor of the name "Tocharian," which ought to be kept for the sake of tradition, however (Pinault, 2002; 2013, 343–351).

A comprehensive selection of texts, with translations and commentaries, is provided by G.-J. Pinault (2008). Most of the Tocharian literature is of Buddhist content and belongs to the Sarvāstivādin and Mūlasarvāstivādin schools, which does not exclude Mahāyāna influence in several texts (Pinault, 2008). There are a few fragments of Manichaean literature, found in the Turfan region, among them a complete hymn to Mani in Tocharian B with an Old Turkic translation, but this text shows a strong imitation of Buddhist phraseology. Leaving aside this rare exception of a text in Manichaean script, all Tocharian texts are written in the North Turkestan Brahmi script, which is known by numerous Sanskrit manuscripts found in the same sites of the northern Silk Road; it has been adapted to Tocharian phonology by adding special letters. This script features an array of styles that can be chronologically ordered. The formal or calligraphic type is used for the Buddhist texts, whereas an informal or cursive type is used for the profane texts. In the ruins of Buddhist settlements, a significant number of secular documents have been found, which are almost exclusively in Tocharian B – accounts of Buddhist monasteries, business letters, caravan passes, inscriptions, graffiti, and so on, reflecting the economic and social life in the oases of the Tarim basin. The rarity of nonreligious texts in Tocharian A is one of the arguments that led to the conclusion that Tocharian B was the spoken vernacular in the whole Tocharian area, whereas Tocharian A was a fossilized liturgical language (Lane, 1966). Other arguments are the uniformity and formulaic style of Tocharian A texts, the numerous lexical interferences between both languages, where Tocharian A has been the receiver language of borrowings from Tocharian B, and glosses as well as additions in Tocharian B found in Tocharian A texts. However, glosses in both languages are found in Sanskrit manuscripts, and the living status of Tocharian A – at least in some places and clans – is suggested by further facts: the existence of a manual of medicine

and magic in a portable format, several manuscripts of a Buddhist drama (*Maitreyasamitināṭaka*) conceived to be performed in public and translated into Old Turkic, numerous loans from Tocharian A in Old Turkic, and finally some influence of Tocharian A in relatively late Tocharian B manuscripts of the Turfan region. This does not contradict the undeniable and pervasive impact of Tocharian B on Tocharian A speakers and scribes during the centuries of composition of texts (Peyrot, 2010). One should also note that the two languages have different terms for rendering the major Buddhist concepts, which may point to separate Buddhist missions at the time in which these languages were alive in different oases and kingdoms.

While Tocharian A was transmitted in a normalized and frozen form, Tocharian B kept changing. Its internal history can be divided into three periods, roughly from the 5th to the 9th century CE: archaic, classical (or standard), late and popular, the last variety being found in profane Tocharian B texts (Peyrot, 2008). These distinctions on the phonological, orthographic, and morphological levels correlate nicely with the results of paleographic analysis, building on the relative chronology established for the Sanskrit manuscripts written in the same regions (for the different varieties of the formal Brahmi, based on imported northwestern Gupta types, and their developments and relations in Sanskrit, Tocharian, Khotanese, Tumshuqese, etc., see Sander, 2005). The specific Tocharian variant of the Early Turkestan Brahmi (introduced into Khotan, on the southern route, in the 5th cent. CE) may have been developed in the early 5th or late 4th century CE and was devised in accordance with the archaic stage of Tocharian B (5th–6th cents. CE; see Malzahn, 2007). This script certainly attained its standard form by the early 7th century, which is confirmed by the historical dating between 620 and 650 CE of caravan passes and inscriptions in Tocharian B, in standard language and normal ductus. The dates that have been obtained so far by means of carbon dating are based on a relatively small sample of Tocharian documents (see also Adams, 2006; Tamai, 2011, 370–375). Although one should keep in mind that they offer the dating of materials (paper, wood, stucco, etc.), those numbers confirm on the whole the preceding picture. Moreover, they prove that Tocharian A manuscripts range at a much later date, from around the late 7th century onward, than Tocharian B manuscripts.

Even though the dating of a proto-language involves some amount of speculation, it is generally agreed that the degree of divergence in phonology and morphology between Tocharian A and Tocharian B reflects a time of separation of at least five hundred years. Therefore, one may surmise that the Common Tocharian period ended in the last century before the Common Era, from which time the two languages developed separately. The dialectal position of Tocharian among the other Indo-European languages remains a moot issue (Adams, 1984; Carling, 2005). The only point of consensus is the separate evolution of the Tocharian branch from the Indo-Iranian branch, with which it does not share any isogloss.

Old Turkic

The language of Buddhist texts belongs to the earliest known stage of the Turkic language family, called Old Turkic, and is found in the remains discovered in the Asian domains of the early Turks. It consists basically of three corpora (Erdal, 1998, 139; 2004, 6–10):

(1) Inscriptions in the Old Turkic runic characters, around two hundred, dated presumably from the 7th to 10th centuries CE. Most of them were discovered in present-day Mongolia, in the area covering the territory of the Second Türk Empire and the Uighur steppe empire following it, and the upper Yenisey basin in central South Siberia. The majority consists of long epitaphs, written on steles for kings or members of the aristocracy, but some are graffiti on prominent rocks.

(2) Manuscripts from the eastern part of present-day Xinjiang and Gansu, China, from the 9th century until the establishment of Mongol rule, in the mid-13th century CE. These documents are written in different scripts: runic form, Sogdian, Uighur (an adaptation of the preceding), Manichaean, Syriac, Brahmi, and Tibetan. This corpus is the most extensive among the three and reflects the multifarious culture of the Uighur societies, after the Uighur royal clans, pushed out from their steppe empire by the Kirghiz, had established their rule in the Tarim basin around 840 CE and eventually made Khocho (near Turfan) their capital. Therefore, the term Old Uighur is appropriate as an equivalent to Old Turkic, when referring to the language of the manuscripts of this corpus. Much of this corpus consists of Buddhist, Manichaean, or Christian religious texts; addition-

ally, there are secular documents such as contracts, personal or administrative letters, medical or astrological treatises, glossaries, folkloric sources, and narratives. The Buddhist material (Elverskog, 1997) amounts approximately to three-quarters of the whole. In colophons of Buddhist texts, the local designation of the language fluctuates between *türk tili*, *türk uygur tili*, and *uygur tili*.

(3) No Buddhist scriptures are preserved in Turkic texts from the Qarakhanid state, dated in the 11th century CE. There is, however, a work, albeit written by a Muslim, which is most valuable for the understanding of Buddhist texts in Old Uighur: the *Dīwān luγāti't-Türk* (Compendium of the Turkic Dialects), a Turkic-Arabic lexicon and encyclopedia, composed (between 1072 and 1083) by Maḥmūd al-Kāšγarī. This author quotes forms from dialects other than the Qarakhanid, his own native speech, which was close enough to Uighur. He gives thus the earliest evidence for other early varieties of Turkic that are quite relevant for the understanding of Old Turkic as a whole. The latter should not be confused with Common Turkic, nor Proto-Turkic, the hypothetical language reconstructed through external comparison (Johanson, 1998). In addition, Old Turkic should not be understood as a common language, which would be relatively uniform and standardized. This language is documented during several centuries in distant places and in different cultural contexts that were open to various cultural influences. The language of the members of the upper class, who sponsored the writing of Manichaean and Buddhist texts, was certainly different from other varieties deemed popular or vulgar. However, one cannot deny that Buddhist texts were intended to be understood by a wide array of people from all social classes. In addition, texts of the second corpus are mostly translations or adaptations from texts in various languages, and these translations were carried out by bilingual (or even trilingual) committees. This may have triggered, at least in part, the influence of the source texts on syntax and word order. One may define Old Uighur of the second corpus as the "standard" or "classical" language, but it is by no means devoid of variations. Several scholars have collected orthographic, phonological, morphological (forms and uses of suffixes), syntactic, stylistic, and lexical features that point to different dialects or different stages of evolution (see e.g. von Gabain, 1974, 3–8; Erdal, 1979; 2004, 11–22, 33–36, 71–75, 91–96; Doerfer, 1993). In terms of relative chronology, it is commonly assumed that many Manichaean texts appear to be pre-classical and closer to the language of the inscriptions of the first corpus. But some of the Buddhist texts, belonging to the first phase of Uighur Buddhism, show also signs of having been composed at an early stage.

A related issue concerns the sources of the Buddhist vocabulary. According to the "Sogdian hypothesis" (adopted by Laut, 1986, 1–12, 59–88, see further discussion by Moriyasu, 1990), members of the nobility of the First Türk Empire made their first acquaintance with Buddhism in the 6th century CE through contacts with Sogdians, who acted as traders in oases along the commercial roads leading from Iranian countries to China; they were also influential in the transmission of writing and of bureaucratic practice in the court of the Türk rulers. This was reflected by the significant number of Buddhist terms going back to Sanskrit, which has been adapted into Old Turkic on the basis of their shape as Sogdian loans. These terms surface in Uighur Buddhist texts, which show otherwise pre-classical features, akin to Manichaean texts. At the further, classical stage, a much larger amount of Buddhist technical terms found in Old Uighur texts were borrowed through Tocharian A, which is known as the source language of several texts translated into Old Uighur (Laut, 1986, 120–148). Moreover, it is notable that in the early phase of Uighur Buddhism, the translators tried often to coin equivalents of Buddhist concepts in their own language, according to a pedagogical trend.

Although the languages surveyed in the present chapter are quite different, under both genetic and typological perspectives, they show some common tendencies in their respective Buddhist corpora. A major issue for the Buddhist communities of these regions was the creation of a Buddhist vocabulary. This was accomplished partly by loans from the languages of the Buddhist missionaries; the first of them spoke varieties of Middle Indic, and mostly Gandhari. The impact of Middle Indic is obvious in the most ancient layer of borrowings in Iranian and Tocharian languages. In further layers, the influence of Sanskrit became increasingly prevalent, because the local Buddhist scribes translated texts that had been previously put into Sanskrit. But not all the different communities were influenced by the Indian culture at the same level. In order to convey the Buddhist faith into various classes of society, it was also felt necessary to create genuine local expressions of Buddhist concepts, which often competed with loanwords. Another interesting dimension lies in the amount of mutual borrowings between the languages in question, which concern of course not only the whole lexicon but also the Buddhist vocabulary. An example is the

An example is the title *bodhisatta* of Middle Indic, which has been misinterpreted as Sanskrit *bodhisattva*; the latter form has been borrowed as such in Parthian *bwdysdf*, Sogdian *pwtystß*, Tocharian A *bodhisattu*, Tocharian B *bodhisatve*, and Old Uighur *pwdystv*, whereas Khotanese has both the loanword *bodhisatvu* and its translation *balysūñavūysaa* (striving for enlightenment), which is more faithful to the original *bodhisatta* as from *_bodhisakta_ (attached to the enlightenment; von Hinüber, 2007, 387–390). From Middle Iranian languages, there have been independent loans in Tocharian languages and Old Turkic, which itself has borrowed from Tocharian. With the introduction of Buddhist literature, the local writers were also led to follow the stylistic habits and to adopt (or to adapt) literary genres that were originally of the learned Indian tradition foreign to their native cultures.

In addition to translating canonical texts, local Buddhist scholars gradually became able to themselves compose narratives and poems that are original compositions based on Buddhist material and framework, such as the Tocharian A *Maitreyasamitināṭaka*, translated in Old Turkic with the title *Maitrisimit nom bitig* (Elverskog, 1997, 139–145; Geng Shimin *et al.*, 2004). The lexical, grammatical, and syntactical peculiarities of the various literary languages used in Buddhist texts are striking, when compared with the forms of secular texts that belong to the same periods.

Languages: Mainland Southeast Asia (Mon, Khmer, and Thai)

Several major vernacular languages in which Buddhist texts were transmitted in continental Southeast Asia are, in chronological order, Mon, Khmer, Burmese, and Thai; peripheral literary traditions confined to the northwest include Shan, Tai Khün, and Pwo Karen.

Affiliations and Structural Characteristics of the Languages

Mon and Khmer belong to two distinct and independent branches of the Austroasiatic language family, the former originating in the center of what is today northeastern Thailand. What structural similarities their early forms may have are due to mutual contact toward the last quarter of the 1st millennium CE.

Burmese and Karen are Tibeto-Burman languages; Karen, a cluster of languages found along the Salween River down to the Gulf of Martaban, is distantly related to Burmese, and Mon speakers have been in contact with it since early historical times. Thai, Shan, and Tai Khün are part of the Tai-Kadai family of languages; while belonging to its southwestern subgroup, Shan has been, over centuries, exposed to profound influence from Burmese.

Given that the advent of vernacular writing spans a period of a millennium and a half, philologists are in a position to document and date linguistic change. The fact that Mon represents the language of the earliest Buddhist traditions while at the same time extending over the largest geographic area on the continent, ranging from northeastern Thailand up to Laos (Vientiane and environs), to central and northern Thailand, lower Burma (Gulf of Martaban), the lower Irrawaddy Delta, and central Burma (Pagan, Kyaukse, and Pegu), gives it a unique position in the linguistic history of the peninsula.

Mainland Southeast Asian (MSEA) languages differ structurally at all levels of grammar from Indo-Aryan (IA) languages in fundamental ways. Writing systems originally devised for IA languages proved to be inappropriate for the phonological complexity of MSEA languages – for not only their consonant and vowel inventories but also their tone systems, including phonation types (whereby lexical meanings are distinguished by differences in voice quality such as modal, creaky, or breathy) and different syllable and word structures, requiring thus extensive adaptations.

Writing Systems and Writing Support

Some of the earliest writing on the mainland originated in central Thailand and southeastern and northwestern Cambodia in the 6th to 7th centuries CE. The script is Indic in origin, and the languages are Old Mon and Old Khmer. Mon exhibited by then already modifications to the script: thus /ɓ/ is written with a modified *akṣara* (syllabic character) *ba*. At first, vowel notations were underdifferentiated in both languages, specifically for /ɯ ~ ø/, or the diphthongs /iə uə/; later on digraphs were used, such as *ui* for /ɯ/, or new graphs were created, such as in Thai, and then adapted in Khmer. By the 9th century CE, local differentiation appeared, and one can speak of distinct Mon and Khmer scripts proper, from which two branches in the development of MSEA scripts developed – a southeastern one, yielding central and southern Thai derivatives, and a northwestern one, leading to adaptations of Burmese, northern Thai (Lanna), and Shan, among others.

Thai, the central and southern variety of which had adapted Khmer script by the 14th century, had to create symbols for its series of velar fricatives /x ɣ/ – modified *akṣaras* for *kha* and *ga* – as well as its labiodental fricatives /f v/, for which *ba* and *pha* were modified. *Pa* and *ta* had to be modified to accommodate the Thai distinction between voiceless stops /t p/ and voiced implosives /ɗ ɓ/, a distinction not present in pre-Angkorian Khmer – that is, prior to the 9th century. Voiceless nasals were written as nasals with *ha* in front; notation for tones consisted at first in a short vertical stroke and a cross placed above an *akṣara*. In this variety of Thai, subscripts are unknown. Finals are not marked by *virāma*, a mark used to suppress

Also available online – www.brill

the inherent vowel of an *akṣara*, but in early forms of Thai by reduplicating the final consonant, as was the case in Late Old Mon and some early Khmer varieties. By contrast, the northern variety of Thai was written in Mon script.

By the early 12th century, Burmese was written in Mon script, and here, too, modifications had to be made due to differences in Mon and Burmese phonology: depending on scribal preference, tones in Burmese were marked by *visarga -ḥ* (/-h/ in Mon) and the vowel support, used to note a glottal stop /ʔ/ in Mon, being placed below an *akṣara* in final syllable position in Old Burmese script to denote "creaky voice." As Mon and Burmese lack distinctive vowel length, the respective vowel signs *a, ā, i, ī, u*, and *ū* are used to encode different phonological properties, such as "inherent" final glottal stop or a "stopped" tone in the case of graphically short vowels /-aʔ, -iʔ, -uʔ/ as opposed to /-a, -i, -u/. *Anusvāra*, which was originally in IA a diacritic mark to indicate nasality, may have been used since Middle Mon of the 14th century in velar-final contexts to modify the inherent vowel /a/ > /ɔ/ and in yet others to mark a glottal stop /-ʔ/ or final /-h/, besides being the standard notation for final /-m/.

Generally, *akṣara*s for retroflex consonants have either been dispensed with as they do not exist in vernaculars or assumed another phonological role (e.g. *ḍa* for vernacular /ɗ/ instead of IA /ɖ/); similarly, voiced aspirated stops are unknown in native vernaculars and are thus confined exclusively to loans.

As for writing support, MSEA vernaculars show a great variety of material and kinds of objects inscribed: stone (slabs, pillars, and *stambha*s [columns] for supporting *cakra*s [wheels of the law]), clay/terracotta (seals, tablets, plaques, and miniature stupas), metal (gold, silver, copper, bronze, and lead for bells, statues, and low-relief repoussées), and textile as well as captions attached to mural paintings (specifically Mon and Burmese at 12th-cent. Pagan temples), in addition to documents written on palm leaf and local paper.

The longest inscriptions in MSEA languages are from Burma, written in Mon: 18 faces from Kyanzittha's palace in Pagan (12th cent.) and 10 slabs from the Kalyāṇī Sīmā Pagoda in Pegu (1480), the latter a key text for the history of Buddhism in Burma. (For the Pali text of the latter, see Taw Sein Ko, 1892; for the Mon faces, see Blagden, 1928.)

Mon

The earliest forms of Mon, attested in 6th- to 8th-century inscriptions from central and northeastern Thailand, are close to a reconstructed proto-Austroasiatic (AA) ancestor (see Shorto, 2006). Up to the 12th century, several dialects and distinct scribal schools can be distinguished as well as a western regional cluster exhibiting affinities with contiguous Austronesian dialects (personal pronouns in some of the Pagan epigraphs and word structure in 11th-cent. texts from Thaton and Tavoy). Old Mon distinguishes in initial position a series of unaspirated voiceless stops /k-, c-, t-, p-/ from an aspirated series /kʰ-, cʰ-, tʰ-, pʰ-/ and contrasts the former with a series voiced stops /g-, ɟ-, d-, b-/. Unaspirated voiceless and voiced stops in turn contrast with prenasalized stops /ⁿk-, ᶮc-, ⁿt-, ᵐp-, ⁿg-, ᶮɟ-, ⁿd-, ᵐb-/. Initials include further implosives /ɗ- ɓ-/, glottal stop /ʔ-/, nasals in all four positions /ŋ-, ɲ-, n-, m-/, liquids /r- and l-/, semivowels /j- w-/, and spirants /s- h-/. Consonants that may occur in final position include voiceless stops, nasals, liquids, semivowels, spirants, and the glottal stop. A distinctive AA feature are palatals and liquids in final position. Initial cluster combinations are numerous, varied, and generally conformant with AA. Old Mon vowels include /i, e, a, ai, ə, u, ø, ɯ, o, ɔ, ai, uə, iə/. Native word structures are C(C(C))VC, CVC(C)VC, CCVC(C)VC, and, exceptionally, CVCVCVC (where C refers to a consonant and V to a vowel).

Characteristic for Mon as an archaic AA language is the fact that words must end in a final consonant; open syllables do not occur. This has implications for the treatment of IA loans as open syllables in IA loans must be closed in Old Mon, either by dropping the final vowel in IA, as in Sanskrit/Pali *vihāra* > *wihār*, or by an artificial spelling device, such as adding *-h* or *-w* as in Sanskrit *śrī* > *srīh* ~ *srih*, Sanskrit/Pali *devatā* > *dewatāw*, and *pūjā* > *pūjāw*. By the 13th century in northern Thailand, there is first evidence of shifts in final consonants /-s/ > /-h/, with subsequent changes in final palatals /-c -ɲ/ and liquids /-r -l/ by the mid-14th century in a text from Twante township, near Yangon, marking the beginning of Middle Mon.

Additional changes affect medioclusters, which in turn leads to restructuring and mergers of affixes in Mon morphology. By the late 16th century, the complete breakdown of voicing distinctions in the initial

stop series had led to two different phonation types, modal voice and breathy voice, sometimes known as "register distinctions" (Middle Mon /teʔ/ "that (dem.)" – /deʔ/ "younger sibling" > modern Mon /teʔ/ – /te̤ʔ/). These changes were followed around the 18th century by further simplifications of initial nasal clusters leading to a contrast between voiced and voiceless nasals /ŋ-, ɲ-, n-, m-/ and /ŋ̊-, ɲ̥-, n̥-, m̥-/, respectively, still attested in modern speech. Shifts of /cw-/, /sw-/, and /ɟw-/ clusters gave rise to a bilabial fricative /ɸ-/, while /sl-/ > /l̥-/. Contrastive vowel length is absent in Mon. Mon dialects in Burma today are highly diverse and can be phonetically complex, such as possessing prestopped nasals in final position or three different phonation types (modal, breathy, and pharyngealized vowels /V, V̤, Vˤ/).

Old Mon morphology is both inflectional and derivational, with most affixes being reconstructible at AA level. Inflections include the verbal prefix *s-* for the "irrealis," a homorganic nasal infix *-N-* for the "frequentative," and the infix *-m-* to form non-predicative, attributive verbs. Derivational affixes include *p-* for the "causative," *-n-* for nouns marking the "instrumental," and *-r-* and *-w-* (< AA *-p-) for forming nouns and a vocalic infix in complementary distribution. Inflections disappear with Middle Mon, while modern varieties show a completely restructured and leveled derivational system including syllabic prefixes such as /hə-, kə-, tə-, pə-/ and complex substitutions of base initials. Old Mon requires stringent morphophonemic rules, reminiscent of those attested in Aslian languages of the Malay Peninsula. Some derivational infixes, such as *-r-*, are actually put in front of the base initial, and the base initial is then copied in initial position of the derived word, as in *das* (to exist) > *dirdas* (existence); if the base initial belongs to a glottal class (/ʔ-, ɗ-, ɓ-/), then it is being replaced by an /r-/ initial in its derived form, as in *ḍuk* (to have completed) > *rinḍuk* (to complete, perfect), by way of the infix *-n-*.

Word order in Mon syntax conforms to a verb-medial pattern, with the subject initial position. Unusual for MSEA languages, Mon has no classifiers (descriptive nouns in quantified expressions), which, however, is to be expected given that plurality is marked in addition to definiteness. Equally

unusual is a four-term demonstrative system, two of which may occur as sentence initial predicates as are a set of noun-focus particles.

A special feature in Mon textual tradition attested since the 12th century, which was to be borrowed later on by Burmese, is a set of translation particles used in Pali-Mon bilingual texts, called in Mon *trāy*, spoken Mon /krai/, and now conventionally known by its Pali term "*nissaya*" (Skt. *niśraya*). It comprises native particles, in abbreviated form, denoting Pali case marking, which Mon lacks, such as "nominative" *yaṅ*, abbreviated in bilingual texts as *ṅ*, or "accusative" *hān* ~ *han* ~ *hin*, abbreviated as *h*. On palm-leaf manuscripts, the Pali text is written above the Mon, usually in a smaller style of writing, or, when written in a linear fashion, each Pali phrase immediately precedes the vernacular one. A fixed set of grammatical markers and verbs serves to indicate other case endings and mood (see Pruitt, 1994, for further references). The Mon lexicon does not distinguish social levels of speech, except for an honorific particle, in Middle Mon, preceding verbs of motion, *kña* V, or the preverbal element *cin* V, both applied to monks.

Khmer

Khmer of the pre-Angkorian period differs significantly from Mon, although speaker communities are assumed to have been neighbors in the Mul and Chi basin of northeastern Thailand by the 8th or 9th century.

In comparison with proto-AA, Khmer had by then innovated its phonological inventory, having lost its original AA implosives. Today's implosives derive from later Angkorian plain voiceless stops /t- p-/ > /ɗ- ɓ-/, a shift that explains the necessity for Thai to provide consonants symbols for those voiceless stops, on the one hand, and the reason why the Thai writing system cannot have been adapted prior to that Khmer shift, on the other. In other respects is the consonant inventory for finals identical with Old Mon, as is the one for initials, except that Khmer lacks the series of prenasalized stops. Khmer also tolerates, from its written inception, open syllables, unlike Old Mon. It is generally phonologically more stable throughout its history than Mon, possessing palatal and liquid finals to this very day. While vowel length in modern Khmer is distinctive, one still cannot say if that distinction goes back to Old Khmer.

Innovations in the writing system, such as notation of vowels, occur by the Middle Khmer period from the 14th century onward and are due to Thai influence, which grew increasingly strong, adding /ɯə/ – confined to Thai loans – to the vowel inventory.

Although modern standard Khmer does not distinguish phonation types, a register phase is to be reconstructed but cannot be dated. As phonation affects, among other parameters, vowel articulation, this permeated the Khmer vowel system to such an extent that it eventually duplicated its vowel inventory, making phonation as a phonological feature redundant.

Morphology is skewed by extensive analogical leveling and internal restructuring. Inflections, such as in Mon, had never been attested in its history. Infixes *-n-* for "instrumental," *-m-* for "agentive," and, when in complementary distribution in case of CC base initials, for "causative" are AA reflexes as is *-p-* and the "causative" prefix *p-*, which today is fused with the co-occurring *-N-* "frequentative." Distinctive in comparison with other AA languages – and thus likely to be yet another innovation – is a rhotacized series of prefixes of the form *Crə-* with a diverse set of functions.

The periodization of Khmer is much less clear-cut than of Mon. The beginnings of Middle Khmer have not yet been determined but can be assumed to go back to around the 14th century. Equally uncertain is the identification of early dialects.

The study of early syntax is hampered by the fact that most Old Khmer inscriptions are donation records, featuring a limited vocabulary and phraseology. Buddhist inscriptions of the 16th to 18th centuries show a greater range of grammatical constructions, sufficient to identify discontinuities in its historical development. While early Khmer numeral systems are vigesimal and native, from the 16th century onward, numerals higher than ten were borrowed from Thai.

A pronominal system inherited from AA was gradually being replaced, presumably under Thai influence, by a complex set of terms of address. The early modern period is characterized by an increasing syntactic and lexical convergence with Thai.

Thai

The linguistic history of Thai is to be divided into two distinct phases, marked by a fundamental shift

in its tonal system, which, in turn, was initiated by a collapse of its voicing distinctions.

While central Thai script was adapted from Khmer by the early 14th century in northwestern Thailand at Sukhothai and its adjacent provinces, three other scripts were concurrent at this site complex: (1) northern Thai, derived from Mon, (2) Khmer proper (for Pali and Khmer), and (3) another of its derivate, which is the ancestor of Lao script, the Fak Kham script.

Thai had three lexically contrastive tones, referred to as A, B, and C, since the exact phonetic characteristics cannot be reconstructed. A fourth tone, D, occurred before final stops /-k, -t, -p/ and was not contrastive. In writing tone, A remained unmarked, tone B was marked by a short vertical stroke, and tone C was marked by a cross. In some inscriptions, tones were not marked at all, in others inconsistently, and in still others in a consistent manner.

Initial consonants differ markedly from AA: Sukhothai retained from proto-Tai two sets of fricatives /x- ɣ-/ and /f- v-/ and two sets of nasals, voiced /ŋ-, ɲ-, n-, m-/ and voiceless /ŋ̊-, ɲ̥-, n̥-, m̥-/ as well as /w- ʍ-/, two labialized velar approximants, voiced and voiceless, respectively. These typically Tai sets complemented the pan-Southeast Asian unaspirated stops, voiced and voiceless, aspirated voiceless stops, initial liquids, and semivowels. Finals were, in comparison with AA, more restrictive, being confined to the three stops above, semivowels, and open syllables. Complex clusters posited for proto-Tai had by the 14th century already been simplified, as had numerous diphthongs. On the basis of Sino-Thai bilingual glossaries (*hua-i i-yü*), Mon loanwords, transcriptions of names in European records, and Thai verse texts, it is possible to date sound shifts in Thai, even though the actual writing system remained stable (Bauer & Gedney, 1989; Shintani, 1974). It thus appears that sometime during the 16th century, voicing distinctions were lost, leading to a merger of formerly voiced stops and voiceless aspirated stops resulting in the latter series, which was also the target for the velar fricatives. The voicing distinctions in the labiodental fricatives were lost, leaving again the voiceless one. By contrast, the voiceless nasals got devoiced as were /l̥-/ merging with /l-/ and /ʍ-/ merging with /w-/. The loss of voicing distinctions with its subsequent merger led to a split in the tonal system, duplicating the number of tones from originally three to six.

Vowel length in Thai is distinctive; the vowel inventory equals that of Old Mon except for /ø/ but to which should be added /ɛ/; the diphthongs /ɯə, aw, iw, ew, uy/; and the triphthongs /iəw, uəy, and ɯəy/. Native word structures are simple, being confined to C(C)V(C) and C^{h}(C)V(C); all other forms as they may occur are loans.

Word formation is by composition; morphological pairs in the lexicon, consisting of base and derivative, are actual loans from Khmer. Since the 19th century, neology has frequent recourse to IA formatives. Worth remembering, though, is the fact that early IA loans entered Thai by way of either Khmer or Mon; witness the tendency to naturalize IA loans. Etymological spellings are a phenomenon of the 19th century (e.g. *sāssanā* ~ *sas*^{1}*nā* ~ *sāshnā* [religion] for the modern prescriptive spelling *śāsanā*).

In syntax as well as lexicon, a couple of layers can be discerned – an earlier Mon layer and a subsequent Khmer one. There are quite distinct syntactic convergence phenomena in the inscriptions of Sukhothai and its environs due to Old Mon; while these are structural features, actual grammatical particles have been borrowed from Khmer. Convergence with Mon also suggests that its textual resources may have found their way in to Thai epigraphs of the 14th and 15th centuries. If nonnative authorship was present remains to be demonstrated but should be considered given the kind of orthographic variation. At least two different dialects can be postulated, and further investigation may reveal an even more complex picture. Unlike later varieties, epigraphic Thai shows a personal pronominal system intact, including a dual. Classifier usage is more restricted than at later stages of the language.

Quantitative analysis of loans in early Thai remains a desideratum; on the basis of the 1982 edition of the Thai dictionary of current usage issued by the Royal Institute, Bangkok (*Bacanānukram chpăp rājapăṇḍityasathān ba.śa. 2525* [The Royal Institute Dictionary, BE 2525]), covering almost ten thousand lemmata, the rate of loans approaches 40%.

Bibliography

Only the most basic lexical and grammatical references to medieval languages are given, as these are most relevant to the transmission of Buddhist texts. Comparative dictionaries cited should provide help to identify native words and thus preclude false etymologies of borrowings. Text editions and indexes are to be found there. For all other references up to the year 1985, readers should consult F.E. Huffman (1986); for up-to-date information, see Brill's online *Linguistic Bibliography* (http://bibliographies.brillonline.com/browse/linguistic-bibliography).

Physical Bases

Manuscripts and Printing: South, Southeast, and Central Asia

The Buddhist text tradition begins at the end of the period of orality in India. Once script was introduced by the time of Aśoka, it seems that the Buddhists were keen to avail themselves of the new medium, quite in contrast to the followers of the equally oral vedic tradition, who remained reluctant to use script (von Hinüber, 1989, 71). The following chronological survey describes major collections of extant manuscripts beginning in the northern periphery of India including Central Asia with the exception of Tibetan and Chinese manuscripts and then proceeding to Sri Lanka, Burma, Thailand, and Cambodia. (A handbook on Indic Buddhist manuscripts is provided by Harrison & Hartmann, 2013; comp. Berkwitz, Schober & Brown, 2009.)

It is impossible to know when the first Buddhist texts were written down. Only the Theravāda tradition – which preserves the oldest extant history of the Buddhist order in two chronicles, the *Dīpavaṃsa* (Chronicle of the Island [Ceylon (Sri Lanka)]) and the somewhat later *Mahāvaṃsa* (Great Chronicle) – mentions the 1st century BCE as the approximate date at which the Tipiṭaka was committed to writing. The reason was the fear of losing the texts during politically unstable times (Bechert, 1992). According to later traditions, however, which had forgotten all about the early orality, the Bodhisattva learned how to read and to write in school, and the Buddha himself even writes using his own blood (von Hinüber, 1989, 72).

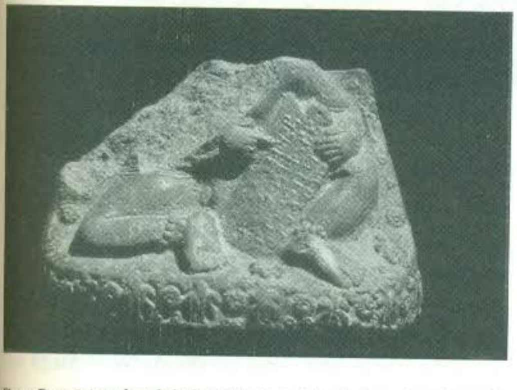

Fig. 1: Practicing the alphabet (Shunga, Ahicchatra, 1st cent. BCE).

The writing material traditionally used in India and consequently also by Buddhists is palm leaf (Skt. *tālapatra*), which is prepared in a complicated process from the leaves of the talipot palm tree (bot. Corypha umbraculifera). The form of the palm leaves determines the oblong shape and the measurement of the books (see fig. 2, 3, and fig. 4). Only in the northwest are texts copied also on birchbark (Skt. *bhūrjapatra*; Janert, 1995, after Hoernle, 1901). Birchbark manuscripts (see fig. 5 and fig. 6) are either scrolls or imitate the shape of palm-leaf books, and even modern printed books can stick to this traditional format. Small formats like "pocket books" mentioned occasionally in Buddhist literature are rare but exist, for example, a *Prātimokṣasūtra* manuscript in about 166 folios measuring 4 × 9 cm (Karashima, 2007, 71).

The script is either scratched into palm leaf with the help of a sharp pointed metal stylus (Pal. *ārakaṇṭaka*) in South India and Southeast Asia or written by using ink made from lampblack and a pen made of bamboo, the latter method being preferred in North India and beyond. After being made with a stylus, the grooves in the palm leaves must be filled with lampblack in order to make the script visible. This process has to be repeated after a while, because the lampblack disappears in the course of time. Moreover, oil must be applied regularly to palm leaf to prevent it from becoming brittle. The structure of birchbark allows only the use of pen and ink. The ink, which is kept as a liquid or in dried form as pellets (earliest reference can be found in the *Mṛcchakaṭika* [1938, 63]), is usually made from lamp black (Gode, 1946). Occasionally, red ink is used to highlight certain parts of the text. Palm leaves can be and were reused as palimpsests after the script in ink was removed (Lüders, 1940, 192). A so far unique palimpsest with erased Kharoshthi script overwritten by a text in Brahmi is fragment MS 2376/99 in the Schøyen collection (personal communication by K. Matsuda).

Paper as a writing material was introduced in India only during the Muslim period (Gode, 1944). However, a unique "protopaper" was used already

during the 6th and 7th centuries when the Gilgit manuscripts (see below) were copied (Kishore, 1963–1964). Moreover, Nepalese Buddhist manuscripts are written on a local variety of paper (Trier, 1972), and so are the folding books, which are called *parabaik* (or *pura puik*) in Burma and *samut khoi* in Thailand, where also black paper may be used, with the texts copied in white chalk. In Central Asia, Buddhist texts were in rare cases written also on wood or leather (see below).

Occasionally, other materials such as precious metals or ivory are mentioned in Buddhist literature as a writing material besides cloth (Skt. *paṭa*; Diskalkar, 1979; Sarma, 1985; Konishi, 2005–2006). Rarely, texts on costly materials are preserved such as the gold folios containing the *Paṭiccasamuppāda* and other short texts, which were recovered from Prome (Pyay [Praññ]; see fig. 11) and Maunggun in Burma (Falk, 1997). Of a later date is a fragmentary manuscript of a large text, the *Pañcaviṃśatisāhasrikā Prajñāpāramitā* (seven folios extant), also written on gold leaves and found during excavations in the Jetavana Monastery in Anuradhapura (Sri Lanka) in 1982 (von Hinüber, 1983; see fig. 12). On the special occasion of the celebration of the beginning of the year 1000 of the Cūḷasakkarāja era (i.e. Mar 31, 1638 CE), the king of Burma ordered the Tripiṭaka to be written on 1,008,000 folios of palm leaf and on 10,008 tablets each of ivory, gold, and silver (Tun, 1983, 92, 96, 98).

In Burma, moreover, it is usual to present to monks richly decorated lacquer manuscripts containing *kammavācā* formulas – formulas used in formal acts of the saṅgha – and written in special ornamental script.

The individual folios of palm leaf, birchbark, or paper are held together by a string, rarely wooden pegs, running through one or two holes pierced into each individual folio and through the wooden book covers that protect these piles of loose folios on the upper and lower sides. Very often, these loosely "bound" books fall apart, because the strings tend to break in the course of time. Losses affect mostly the first and last folios, and consequently particularly the colophons (see below).

Sometimes, individual folios are illuminated and book covers richly decorated. Consequently, both are an important source for book painting.

When the book is closed, the cotton strings are pulled and wrapped around the wooden book covers, thus forming a tightly closed package (see fig. 2). This again is wrapped in cloth and again secured by a second string from the outside. To identify the content, a wooden peg (Tha. *chalāk*) bearing the title of the book can be fastened to the outside of such a bundle in Thailand. In Burma, a ribbon (Bur. *cā caññḥ kruiḥ* [or *sazigyo*]) with the name of the owner and the aspiration for merit worked into it may be wrapped around the book (Peters, 2006).

There is no typically "Buddhist" script, with one possible exception, the *bhaikṣukī lipi* ("script of the *bhikṣus*"; also called "arrow-headed script") found only in Buddhist texts of the Sāṃmitīya school (Hanisch, 2008). Otherwise, the manuscripts are written in a large variety of scripts differing according to time and place, all of which, with the exception of Kharoshthi which is based on the Semitic

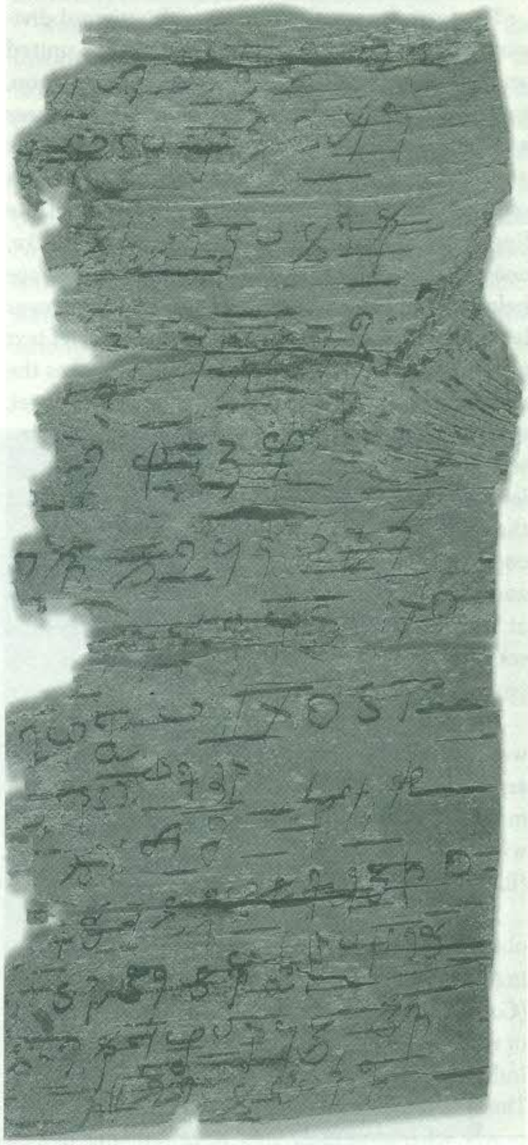

Fig. 5: Birchbark scroll, Kharoshthi script (Salomon, 1999, frontispiece).

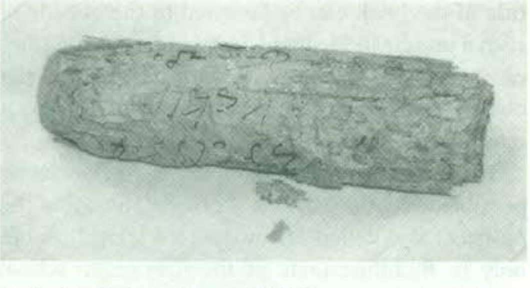

Fig. 6: Birchbark scroll unscrolled (Salomon, 1999, plate 6).

Aramaic alphabet and consequently written from right to left, are ultimately derived from the Brahmi script used in the inscriptions of Aśoka.

The texts are usually written without word division, but occasionally groups of words are united and this unit is separated in manuscripts (Renou, 1957, 16n45; comp. Scharfe, 1967). Sometimes, verses are numbered (von Hinüber, 2013, xviii). Mistakes are occasionally corrected, and words or sentences omitted are added in the margin or between the lines by using different markers in the text (Einecke, 2009; Laut, 1992 [for Uighur manuscripts, see below]). The titles can be found either on a cover leaf or more often only in the colophon, a brief text at the end, which may contain a date as well as the name of the author and the title of the text (Vogel, 1974), the name of a scribe, donor, patron, monastery, and the like. Occasionally, colophons were copied and consequently the date of the exemplar that the scribe used is thus preserved besides that of the copy itself (von Hinüber, 2014b, 110; comp. Buescher, 2011, nos. 6–7 in the catalogue). These colophons are at the same time important, but so far little-used sources for Buddhist and Indian cultural history (von Hinüber, forthcoming).

How books in manuscript form (Skt. *pustaka*) were produced in India can be learned from a mediaeval legal Hindu text, the *Dānasāgara*, composed in Bengal by the Sena king Ballālasena (c. 1158–1179) with the help of his teacher Aniruddhabhaṭṭa (Ballālasena, 1956, ch. 43).

Manuscripts were and are highly estimated as objects of worship (Kim, 2013), while books containing "heretical" scriptures were occasionally burnt (Collins, 1990, 98). Special stands used for reading or worshipping books are known from Thailand and India (von Hinüber, 2013, xxivn34; Kim, 2013, 26). There is some faint evidence that, like in Tibetan prayer wheels, manuscripts were put into revolving cases to "mechanize" recitation also in India (Schopen, 2005). Old and worn manuscripts containing Buddhist texts could be ritually interred in pots (Salomon, 2009). In Thailand, they were and are sometimes burnt and the ashes are incorporated into Buddha images.

Hardly anything is known about Buddhist libraries in ancient India. Only the holdings of the library of Gilgit (see below) survive. There is, however, some evidence from Southeast Asia (von Hinüber, 2013, xxivff.) and library buildings are common in present day Thai Buddhist monasteries (see fig. 7).

The oldest extant Buddhist (and Indian) manuscripts stem from the northwestern corner of the Indian cultural area, Gandhara. The very oldest manuscript was for many decades a version of the *Dhammapada* written on birchbark in Kharoshthi script and Gandhari language, which was bought by the French explorer Jules Léon Dutreuil du Rhins (1846–1894) in about 1892 near Khotan in Central Asia (Brough, 1962, 2). Since 1993, however, a still growing number of even older Buddhist manuscripts of the same type have become available. The exact provenance of these manuscripts is unknown, but Afghanistan or the northwestern provinces of Pakistan are a likely guess (Salomon, 1999, 68). According to carbon dating, the oldest among these manuscripts might date back to before the start of the Common Era. These dates are partly confirmed by paleography when the script of the manuscripts is compared to that of dated Kharoshthi inscriptions.

These Kharoshthi manuscripts are preserved today in the various collections: the British Library fragments (Salomon, 1999), the Schøyen collection

Texts from the British Library and Senior collections have been and are published in Seattle in the series Gandharan Buddhist Texts (Jongeward *et al.*, 2012, 310).

Following the exploration of Buddhist Central Asia during the first quarter of the 20th century, numerous mostly fragmentary manuscripts on paper but rarely also on palm leaf imported from India, or on birchbark but rarely on wood (Nakatani, 1987), or even on leather (Sims-Williams, 2000, 275), were recovered by British, French, German, Japanese and Russian expeditions. The manuscripts thus collected are preserved in London, Paris, Berlin, Kyoto, and Saint Petersburg. Only the Sanskrit texts of the Turfan collection in Berlin are almost completely catalogued (Waldschmidt *et al.*, 1965–2008; with copious facsimiles in X/1–3), while there is a survey of the Hoernle collection in the holdings of the British Library (Hartmann & Wille, 1992; Sims-Williams, 2006). A substantial part of the fragments from all collections is edited in a large number of various publications. Texts from the Turfan Collection began to appear in the series Kleinere Sanskrittexte (1–5; 1911–1939; Hoffmann & Sander, 1987) continued as Sanskrittexte aus den Turfanfunden (1–13; 1955–1990) with selected manuscripts also published as facsimiles (Waldschmidt, 1963). The palaeography of these Sanskrit manuscripts is described in great detail by L. Sander (1968). Fragments from the Hoernle Collection in the British Library are published together with facsimiles (Karashima & Wille, 2006–2009). The manuscripts brought back by the Ōtani Mission (1902–1913), led by Kozui Ōtani (1876–1948) and kept today in Kyoto, are briefly described by Y. Wakahara (2010).

Numerous Sanskrit manuscripts are kept in the Institut vostokovedenija (Oriental Institute) in Saint Petersburg. These were also acquired from Central Asia partly by the Russian consul Nikolaj Fedorovič Petrovski (1837–1908) in Kashgar (from 1882 onward). Others were found during excavations, among them the Bairam Ali manuscript discovered near Merv in Turkmenistan in 1966, which is the westernmost findspot of any Buddhist manuscript (Bongard-Levin, 1975–1976, 78). It contains among other texts part of the *Sarvāstivādavinaya*,

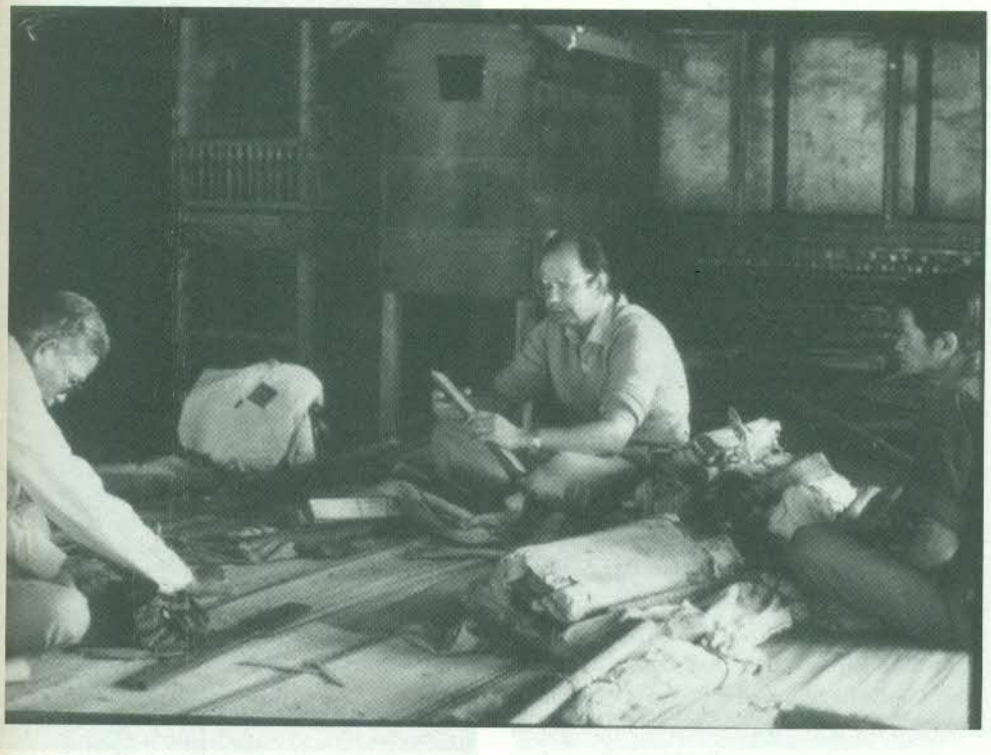

Fig. 8: Sorting out the holdings of a monastic library (Vat Lai Hin, north Thailand).

which is confirmed by the colophon mentioning the scribe Mitraśreṣṭhī, a Vinaya expert (Skt. *vinayadhara*) and Sarvāstivādin; such information on school affiliation is extremely rare in colophons. The holdings of the Institut Vostokovedenija are partly published in three volumes of the series Pamâtniki indijskoj pis'mennosti iz Central'noj Azii (Monuments in Indian Script from Central Asia; Bongard-Levin & Vorob'ëva-Desâtovskaâ, 1985, 1990, 2004), which form at the same time part of the Bibliotheca Buddhica (see below).

At the turn of the millennium, numerous (about 5000) fragmentary Buddhist texts from Afghanistan were acquired by the Norwegian collector Martin Schøyen as part of his huge manuscript collection. These fragments, which are being edited since 2000 in the series Manuscripts from the Schøyen Collection: Buddhist Manuscripts (Braarvig, 2000, 2002, 2006; Braarvig & Liland, 2010), contain texts dating from Kushana times to approximately the 7th century. Some of them can be attributed to the Mahāsāṃghika school. The palaeography of this collection is investigated by L. Sander (2010).

Together with this Buddhist Sanskrit literature found in Central Asia, manuscripts containing texts in a variety of languages other than Sanskrit and in various scripts (Maue, 1997) were discovered since the early 20th century, among them the Iranian languages Khotanese (or Saka; Emmerick, 1992), Sogdian (Utz, 1978; Yoshida, 1991), and very rarely even Bactrian (Sims-Williams, 2000). Khotanese manuscripts, written in a variety of the Indian Brahmi script between the 7th and the 10th centuries (Sander, 1984; 1988; for facsimiles, see Leumann, 1934; Bailey, 1938; and Vorob'ëv-Desâtovskij & Vorob'ëva-Desâtovskaâ, 1965), were found mostly in the Khotan area as well as in Tumshuq on the northern branch of the Silk Road (Emmerick, 1985; comp. Schmidt, 1988). Sogdian manuscripts, which are written in a script that was derived from Aramaic like Kharoshthi (see above) and can be written either vertically or horizontally (Yoshida, 2013), are to be dated to the 8th and 11th centuries (Henning, 1958, 54ff.). They were found at Turfan in Xinjiang and Dunhuang in Gansu (McKenzie, 1976). Collections of Khotanese manuscripts are listed by P.O. Skjærvø (2002, xxxiv) and those of Sogdian manuscripts by X. Tremblay (2001, 203–206).

An unusual paper manuscript discovered in Dunhuang contains a fragment of Kumārajīva's Chinese version of the *Vajracchedikāprajñāpāramitā* not in Chinese characters but transcribed into the variety of Indian Brahmi script otherwise used for late Khotanese texts (Emmerick & Pulleyblank, 1993).

Buddhist manuscripts, which were also written in a variety of the Brahmi script (Schmidt, 1997; Tamai, 2011, comp. Pinault, 2012; for facsimiles, see Sieg & Siegling, 1921) but in an unknown Indo-European language named Tocharian after its decipherment (Durkin-Meisterernst, 2013), and which were copied between the 5th(?) and 8th century, began to surface on the northern Silk Route in the Tarim Basin in the early 20th century. They are preserved today mostly in Berlin (for the catalogue, see Schaefer, 2013), London, Saint Petersburg, and Paris and in the Ōtani collection in Tokyo and Kyoto (Pinault, 1991, 234ff.; 1994).

Furthermore, there are Buddhist manuscripts found in Turfan in a non-Indo-European language, the old Turkic Uighur (Elverskog, 1997). Uighur manuscripts and block prints dating from the 9th to the 14th century are written either in a variety of the Indian Brahmi script, or mostly in a script derived from the Sogdian, or, very rarely, even in Tibetan script. The larger part of the holdings of Uighur manuscripts and block prints in Germany preserved mainly in the Turfan Collection at Berlin are catalogued by D. Maue, among others (Maue,

Occasionally, new finds are recorded from Xinjiang, such as the spectacular discovery in 1959 of 293 fragments of the Uighur *Maitrisimit* (The Encounter with Maitreya), followed by the discovery of about 450 fragments of this text in a cave near Hami in Xinjiang in 2012, as well as of 20 folios of the Uighur version of a lost Sanskrit original entitled *Daśakarmapathāvadānamālā* (Collection of Great Deeds [Called] Ten Courses of Action; Laut, 1996) and 44 folios of the Tocharian *Maitreyasamitināṭaka* (The Drama [Called] the Encounter with Maitreya) at the Buddhist ruins at Šorčuq (Chn. Qigexing) near Yanqi (Karashahr; the ancient Tocharian city Agni) in 1974 (Geng, Laut & Pinault, 2004, 349).

The most spectacular single find of Indic Buddhist manuscripts occurred by chance in the small village Naupur near Gilgit (today northern Pakistan) in 1931. Subsequent excavations conducted at the site in 1938 brought to light a few more partly complete texts.

At present, it is impossible to exactly count the Buddhist and other manuscripts or texts once preserved in the Gilgit library, because after discovery many manuscripts were split up, the folios confused and never sorted out or rearranged. By way of an estimate, there were approximately 50 manuscripts containing about 57 titles, and in addition 17 *avadāna* texts, which perhaps formed parts of one or more collections. The largest manuscript is a voluminous, though incomplete, *Mūlasarvāstivādavinaya*. Exceptionally well-documented are the otherwise little-known *Saṃghāṭasūtra* (eight mss.), besides the *Bhaiṣajyagurusūtra* (five mss.) and the *Saddharmapuṇḍarīkasūtra* (four mss.). Furthermore, there are various *sūtra*, abhidharma, and other texts as well as texts on Indian logic (von Hinüber, 2012; 2014).

This material allows a rare glimpse into the structure of an ancient Buddhist library, because no comparable collection from ancient India has come down to us (see above). It is important to note that this library comprised not only Buddhist texts, but also a grammar, small fragments of various medical texts such as the *Carakasaṃhitā* and Ravigupta's *Siddhasāra*, and non-Buddhist narrative literature (the *Tantrākhyāyika*).

Most of the manuscripts discovered in 1931 are published as facsimiles. The first editions were prepared by Nalinaksha Dutt (1893–1973) and published in the series Gilgit Manuscripts in three volumes comprising nine parts from Srinagar and later from Calcutta between 1939 and 1959. A comprehensive survey of the Gilgit manuscripts, of editions and facsimiles is given by O. von Hinüber (2013b).

The majority of complete Buddhist texts in different varieties of Sanskrit is preserved in Nepal, where, in contrast to India (with the exception of the deserts in Rajasthan), the climate allows for a longer life of books. Therefore the once extremely rich Buddhist manuscript tradition of India was lost almost completely after the decline and final disappearance of Buddhism during the Muslim period, when the necessary replacement of worn out manuscripts by recopying ceased. An exception are a few fairly old manuscripts, which are extant because they were either brought to Tibet and survived (Steinkellner, 2004; Krasser, 2013), or were taken from Bengal to Nepal later at the time of the Muslim conquest of eastern India during the 13th century. Moreover, there is one single Buddhist Sanskrit manuscript containing the *Mañjuśrīmūlakalpa* found in Kerala and copied perhaps in the 16th or 17th century by a scribe coming from North India (Ganapati Sastri, 1920–1925; comp. also Vaidya, 1964), and manuscripts of three Buddhist texts in Tamil. The *Vasudhārādhāraṇī* (also known as the *Sucandrāvadāna*), a Buddhist text also found among the Gilgit Manuscripts (see above), is preserved and used by the Śvetāmbara Jaina community (Jaini, 1968).

The first Buddhist Sanskrit manuscripts were sent from Nepal to Europe by Brian Houghton Hodgson (1800–1894), the second British resident in

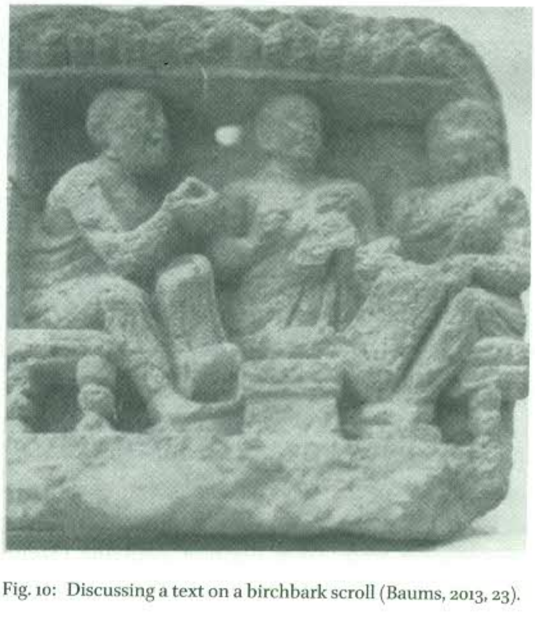

Fig. 10: Discussing a text on a birchbark scroll (Baums, 2013, 23).

Kathmandu in accordance with the Sagauli Treaty (1816). Brian Houghton Hodgson, who stayed in the country from 1820 to 1843, provided manuscripts for Eugène Burnouf (1801–1852), professor at the Collège de France in Paris and one of the pioneers of Buddhology in Europe. On the basis of these manuscripts, Eugène Burnouf prepared his famous *Introduction à l'histoire du Bouddhisme indien* in 1844 and his still invaluable translation of the *Saddharmapuṇḍarīkasūtra* in 1852 (Yuyama, 2000; Kotsuki, 2008). Other manuscripts were procured for Cambridge University by Daniel Wright, surgeon to the Kathmandu Residency between 1866 and 1876. C. Bendall (1856–1906) described them in a catalogue with a groundbreaking historical introduction (Bendall, 1883). Later, in 1884–1885 and in 1898–1899, C. Bendall himself traveled to Kathmandu and discovered among others the oldest manuscript preserved in Nepal, a copy of the *Daśabhūmikasūtra* dating back perhaps to about 500 CE (Matsuda, 1996), and, strangely enough, a fragment of the Theravāda *Vinayapiṭaka* written in Pali and in a local northern script, which is approximately two or three centuries younger (von Hinüber, 1991). A second important early catalogue of Nepalese Buddhist manuscripts in the Durbar Library in Kathmandu was prepared by H.P. Shastri (1905; 1915; 1989).

The heritage of Buddhist manuscripts preserved in Kathmandu, which is still very rich, suffered much from negligence particularly during the 19th century, when centuries-old manuscripts as well as coins and copperplates, some dating back to late Gupta times, were carelessly discarded, once a Buddhist monastery fell into disuse (Bendall, 1883, xxxix). Buddhist manuscripts from public and private collections in the Kathmandu valley were preserved in the form of microfilms by the Nepal German Manuscript Preservation Project from 1970 to 1999 (Grünendahl, 1989). One copy each of this microfilm collection – which also contains a large number of Buddhist manuscripts, for instance old manuscripts of the *Mahāvastu* (Yuyama, 2001) – is preserved in the National Library of Nepal in Kathmandu, and in the Staatsbibliothek zu Berlin-Preußischer Kulturbesitz. At present, the texts on microfilms are being catalogued in Hamburg. A similar project, restricted to Buddhist manuscripts in Nepal, was carried out in Japan (Takaoka, 1981). Holdings of Buddhist manuscripts from Nepal are also catalogued by S. Lienhard (1988) and H. Buescher (2011).

It was only during the 1930s that Buddhist Sanskrit manuscripts from Tibet became available (Steinkellner, 2004). During three journeys (in 1934, 1936, and 1938), the Indian scholar Rahula Sankrityayana (1893–1963) was able to trace and to photograph Buddhist Sanskrit manuscripts in different monasteries. These photographs are preserved in the Kashi Prasad Jayaswal Research Institute in Patna and at the Seminar für Indologie und Tibetologie in Göttingen (Bandurski, 1994; Bretfeld, 1997). They are edited in the Tibetan Sanskrit Works Series published in Patna since 1953, including the *Bhikṣuṇīvinaya*, the Patna *Dhammapada*, the *Bodhisattvabhūmi*, and the *Śrāvakabhūmi*.

Almost simultaneously the Italian scholar Giuseppe Tucci (1894–1984) traveled widely in Tibet and Nepal and photographed or collected Buddhist Sanskrit manuscripts, which are held in the library of the Istituto Italiano per l'Africa e l'Oriente in Rome (Sferra, 2008).

In the late 20th century, more Buddhist Sanskrit manuscripts from Tibet became accessible. The varied fate of these Sanskrit manuscripts during the difficult period between 1960 and 1995 is traced in H. Hu-von Hinüber (2006; contains a survey of publications). In spite of a handlist of 259 titles prepared by Wang Sen (Hu-von Hinüber, 2006, 297–334), the content of the Tibetan collection is far from being known in detail. A small number of texts such as the *Vimalakīrtinirdeśa*, the *Abhisamācarikādharma*, and the *Śrāvakabhūmi* are available as facsimile editions, usually prepared in cooperation with Japanese scholars (Hu-von Hinüber, 2006, 294f.). Text editions are being published systematically from Vienna since E. Steinkellner signed a memorandum for a joint venture of the Österreichische Akademie der Wissenschaften (Austrian Academy of Sciences) and the Chinese Center for Tibetan Studies in Beijing in 1996 (Steinkellner, 2004, 35f.). So far, volumes 1–8, 11 and 14 have appeared in the series Sanskrit Texts from the Tibetan Autonomous Region between 2005 and 2013. Current Chinese activities to edit Buddhist texts within various projects are described by H. Luo (2013) and Saerji (2013).

In a very early period, Buddhist Sanskrit manuscripts dating back to the second half of the 1st millennium were brought from China to Japan, where some folios survive in various temples. Around 1880 they attracted much attention in Europe as the oldest Buddhist manuscripts then known to be extant. Some of them were published immediately in the *Anecdota Oxoniensia* (Müller, 1881). A copy of the *Mahāparinirvāṇamahāsūtra* was brought back to Japan by the founder of the Shingon sect, Kūkai, who stayed in China from 804 to 806 and who is supposed to have copied the text himself, of which

only the Kōyasan Fragment survives (Yuyama, 1981). Besides temples, several universities in Japan hold important collections of Buddhist Sanskrit manuscripts (e.g. Matsunami, 1965).

Of course many Buddhist Sanskrit texts are found in different libraries all over the world. These are described in a large number of catalogues mostly together with other manuscripts from India (Janert, 1965). A comprehensive survey of titles of texts is provided by the yet uncompleted *New Catalogus Catalogorum* published in Madras in a revised edition since 1968. The journal *Dhīḥ: Journal of Rare Buddhist Texts Research* reports regularly on manuscripts and texts since 1986 (thus far 53 issues).

Editions of Buddhist texts have appeared as individual volumes or in various series such as the Bibliotheca Buddhica, the Sobranie buddijskih tekstov izdavaemyh Imperatorskoj Akademieju Nauk published in Saint Petersburg since 1902, and the Buddhist Sanskrit Texts published in Darbhanga, Bihar, since 1958.

In contrast to India, where Buddhism disappeared, an unbroken and old tradition of Pali texts belonging to the Theravāda school survives in Sri Lanka and Southeast Asia. However, the manuscripts actually preserved (for a survey of catalogues, see von Hinüber, 2013a, 252–258) in these areas are considerably younger than those found in the north. With the exception of the gold-leaf manuscripts from Burma and Sri Lanka and the *Vinayapiṭaka* fragment found in Nepal (see above), these manuscripts date from late 15th century onward. Of course this does not mean that this tradition as such is more recent, because there is obviously no connection at all between the age of a manuscript and the date of the text that it conveys.

All Pali manuscripts are ultimately based on the texts of only one monastery, the Mahāvihāra in Anuradhapura, with the exception of faint traces of a South Indian text tradition in some Burmese *jātaka* manuscripts (von Hinüber, 1998, 181). The texts of the Mahāvihāra might be based ultimately

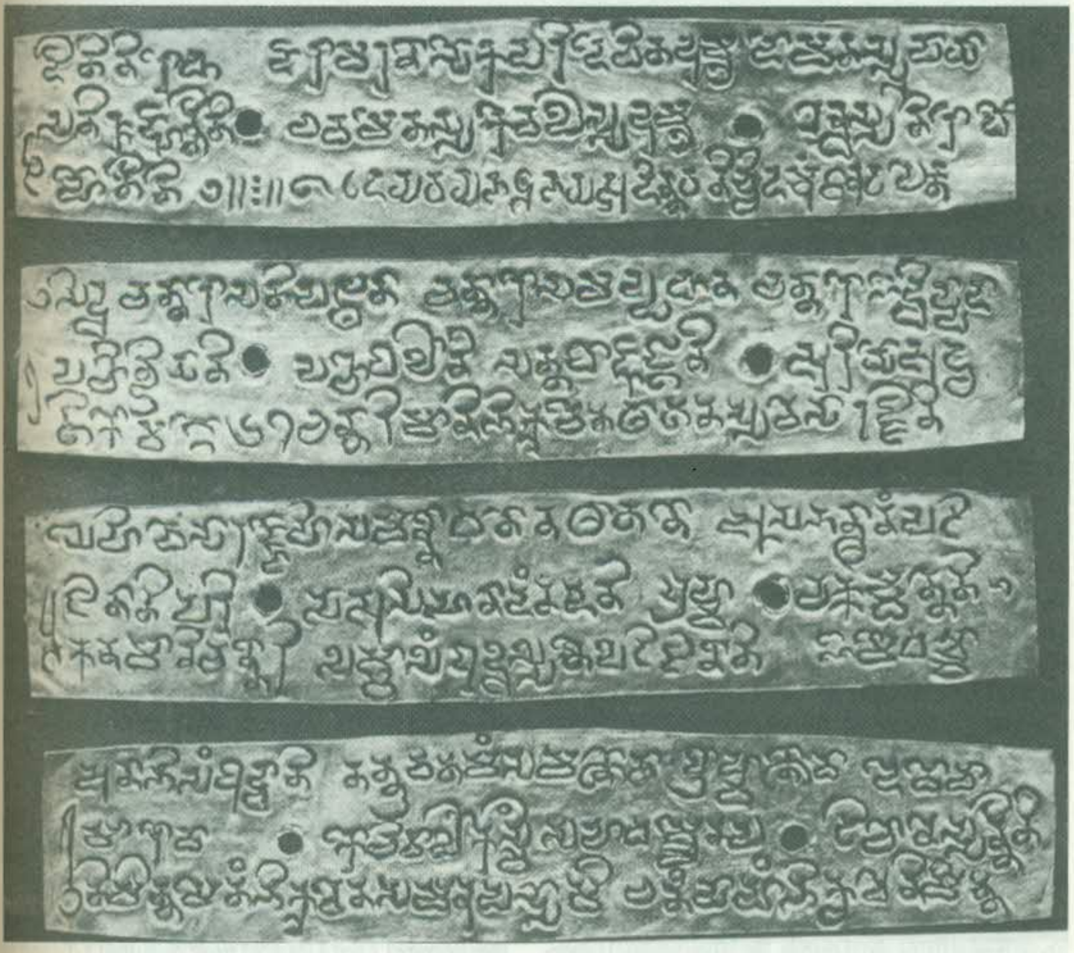

Fig. 11: Gold folios from Prome (Report of the Superintendent, Archaeological Survey of Burma, 1938–1939; Rangoon, 1940, plate Va).

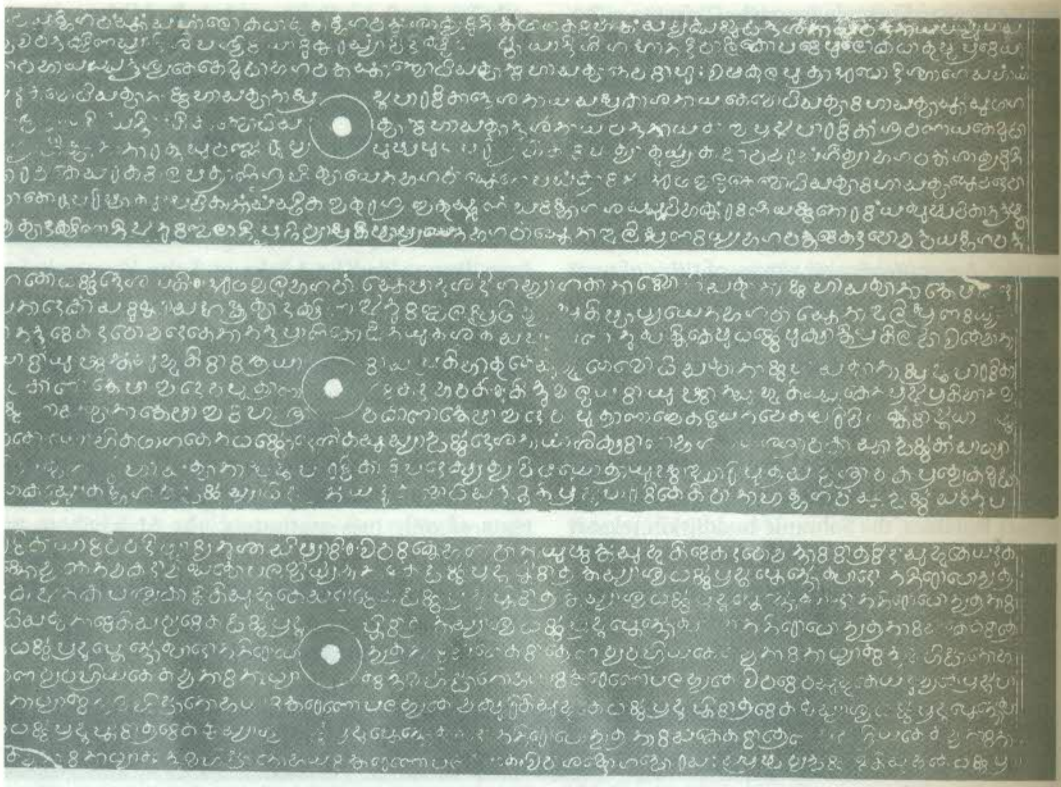

Fig. 12: *Pañcaviṃśatisāhasrikāprajñāpāramitā* on gold leaves from Anuradhapura (lose sheet of paper published in Sri Lanka in about 1980).

on the ones of the 1st century BC. However, nothing can be known about the development of the wording before it was consolidated by the commentaries of Buddhaghosa, Dhammapāla, and others from about 400 CE. A comparison of the Nepalese *Vinayapiṭaka* fragment and the ancient manuscripts from north Thailand with modern editions shows that the text was very stable, quite in contrast to the northern tradition in which almost every manuscript of the same text found at Gilgit shows at times considerable differences in wording. But that the Theravāda manuscript tradition stands out as particularly careful and well preserved may be an illusion due to the fact that canonical texts are better protected against changes than their northern counterparts, which existed as separate texts outside the canon.

During a crisis of Buddhism in Ceylon during the late 18th century, some Pali texts were completely lost and had to be reintroduced from Siam (today Thailand; Supaphan, 1988; von Hinüber, 1988b). The exact extent of the rich manuscript tradition of Ceylon is not known at present, despite different surveys (Somadasa, 1959, 1964; Blackburn, 2002; Ñāṇatusita 2013; comp. de Silva, 1938). Important collections of Buddhist manuscripts from Ceylon include the voluminous Nevill Collection in the British Library (Somadasa, 1987–1995) and the Royal Library in Copenhagen, which holds comparatively old Pali manuscripts acquired by Rasmus Rask (1787–1832) in 1821–1822 in Ceylon. Buddhist manuscripts from Sri Lanka preserved in German libraries are listed by H. Bechert and M. Bidoli (1969–1997; for the holdings of the Royal Library in Copenhagen, see Godakumbura, 1980). .

While manuscripts from Sri Lanka contain mostly a rather conservative text, the monks in Burma tended toward innovation in the wording, following the teaching of the highly influential grammar composed by the Burmese grammarian Aggavaṃsa, completed in 1154 CE (von Hinüber, 1988a). Hardly anything is known about the Pali tradition of the Mon, which was, it seems, ultimately absorbed by the Burmese tradition.

The important collection of manuscripts in the possession of the last king of Burma was split up after the British annexation of Upper Burma in 1886, with approximately one quarter acquired by the India Office Library (now British Library) and the rest by the Bernard Free Library (now National Library) in Yangon (Rangoon). A catalogue of this royal library,

the *Piṭakatthamain* (*Piṭakat-tō-sa-muiṅ:*), was compiled from memory in 1888 by the former librarian to King Mindon (1808–1878; r. from 1852) and to his successor Thibaw (1859–1916; r. 1878–1885), U Yan (Maṅ:-krī: Mahāsiriteya-sū [= U Yan] 2012). The manuscripts actually extant and now in London are listed by V. Fausbøll (1894), and those in Yangon in the *Catalogue of Pāli and Burmese Books and Manuscripts Belonging to the Library of the Late King of Burma Found in the Palace at Mandalay in 1886* (1910). The holdings of German libraries are catalogued by H. Bechert (1979ff.) and those in the Royal Library in Copenhagen by C.E. Godakumbura (1983).

Manuscripts from monasteries in Burma are occasionally offered for sale as antiquities, particularly in Thailand. To protect them from being dispersed and lost, a substantial number has been acquired by the Fragile Palm Leaves Foundation initiated in the mid-1990s by P. Skilling in Bangkok (Skilling, 1997–2002).

The manuscript tradition of Thailand is split into two branches, which use different scripts: in the north, characters similar to the Burmese script are written, while in the south, Khmer script prevails. The much older northern branch begins with a fragment of the *jātaka* copied by the scribe Ñāṇaraṃsi in 1471 CE (von Hinüber, 2013, ms. no. 108). Some undated fragmentary manuscripts may be contemporary but hardly older.

A substantial number of Pali manuscripts of high quality was copied during the late 15th and 16th centuries in monasteries of the village Tha Soy, which is submerged today by the Bhumibol Reservoir. For the most part, they are preserved in the Vat Lai Hin, a monastery near Lampang in northern Thailand (Lanna), while a few of the same lot found their way into the National Library of Thailand or the Siam Society Library, both in Bangkok. These manuscripts preserve an excellent text tradition, which is sometimes even superior to the one in Sri Lanka or Burma.

The tradition in central Thailand is considerably younger because Buddhist manuscripts in both Pali and Thai suffered heavy losses during the wars with Burma in the 18th century, particularly after the destruction of the old capital Ayutthaya in 1756. A new set of the Tipiṭaka was compiled as the first Royal Edition in Bangkok in the late 18th century on the basis of Pali manuscripts in Mon, Lao, and Khmer scripts. The royal editions issued during the Rattanakosin era (since 1782) and preserved at Vat Phra Kaew, a temple in the royal palace in Bangkok, are not accessible.

Besides numerous libraries in individual monasteries, manuscripts are collected by the National Library in Bangkok. The holdings of the this library were catalogued during the beginning of the 20th century. However, these catalogues were virtually inaccessible before they were reissued in a revised form (Skilling & Pakdeekham, 2002; 2004). There does not seem to be any published catalogue or list of acquisitions since 1925. Important collections of Southeast Asian Buddhist Pali manuscripts from Thailand are preserved at the Ōtani University Library (catalogue 1995) and in the Royal Library in Copenhagen (Cœdès, 1966).

Palm-leaf manuscripts from Lanna are available in two substantial microfilm collections. During the years 1978–1990, the Social Research Institute at the University of Chiang Mai built up one collection, while the other one was brought together at the initiative of H. Hundius between 1986 and 1991. These microfilms are deposited at the library of the University of Chiang Mai and at the Akademie der Wissenschaften und der Literatur in Mainz (von Hinüber, 2013, xff.). At present, they are being digitized.

A similar project, also initiated by H. Hundius, was conducted in Laos between 1992 and 2004. The results are accessible electronically and can be consulted in the Digital Library of Lao Manuscripts (see Web site). Lao manuscripts preserved in Germany are listed by K. Wenk (1976).

In Cambodia, efforts are being made to rebuild the manuscript tradition, which was almost completely destroyed during the Khmer Rouge regime (de Bernon, 2004; comp. Godakumbura, 1983).

The first Theravāda texts to reach Europe were a present by the Thai king Narai (1656–1688) to King Louis XIV of France (Filliozat, 2009). They were incorporated into the Bibliothèque Royale in Paris and served as the basis for the first Pali grammar (Burnouf & Lassen, 1826). The first complete Pali Buddhist text ever printed in Roman characters was the *Mahāvaṃsa*, edited and translated by G. Turnour (1799–1843) in Ceylon in 1837. The first critical edition was the *Dhammapada* by V. Fausbøll (1821–1908) in 1855. In 1881 T.W. Rhys Davids (1843–1922) founded the Pali Text Society, which has continued to publish Pali texts to the present (on the history of the Pali Text Society, see von Hinüber, 2007). Besides these editions, which are considered standard, there are excellent publications from the Theravāda countries. An unusual edition of the Tipiṭaka was ordered by the Burmese king Mindon, who had the complete text transferred from palm leaf to stone and engraved on 729 slabs between 1861 and 1868. This edition was checked and corrected during the fifth council (Pal. *pañcamī dhammasaṅgīti*) between 1868 and 1871 (Bollée, 1968).

The (almost) complete canon was printed for the first time in Thailand in 1893 to commemorate the 25th jubilee of King Chulalongkorn (1853–1910; r. from 1868; von Hinüber, 1997). Moreover, it is a custom in Thailand to print Buddhist texts on the occasion of the cremation of a high-ranking person. These "cremation books" are distributed as gifts to those attending the ceremony.

Part of the Sinhala manuscript tradition is available in the 49 volumes of the Simon Hewavitarne Bequest Series printed between 1917 and 1940, which comprises all commentaries (*aṭṭhakathā*) to the Theravāda Tipiṭaka including Buddhaghosa's *Visuddhimagga*. The commentaries have also been published on the basis of Thai manuscripts by the Mahamakut Buddhist University in Bangkok since 1920. The last comprehensive edition of the Tipiṭaka, with all commentaries and subcommentaries in 117 volumes (digitized as *Dhammagiripāliganthamālā* of the Vipassana Research Institute [see Web site]) was prepared on the basis of the Burmese manuscript tradition in Yangon on the occasion of the sixth council (Pal. *chaṭṭhasaṅgāyana*) in 1956 to mark the 2500th anniversary of Buddha's nirvāṇa.

OSKAR VON HINÜBER

Manuscripts and Printing: Tibet

Although the earliest uses of writing in Tibet were not Buddhist, manuscripts and later printed books came to play a fundamental role in the development of the tradition. The earliest surviving Tibetan manuscripts are from Central Asian sites ruled by Tibetans during the Imperial Period, dating from the late 8th century. The earliest extant Tibetan woodblock prints are also from Central Asia, produced in the Tangut Kingdom (1038–1227 CE) in the 12th or 13th century CE. A variety of formats and writing styles developed over the centuries in Tibet, generally linked to the function of the book. Furthermore, the creation of a manuscript or printed book was one of the main methods of generating merit, and books were an integral part of the Buddhist economy of patronage, donation, and exchange as well as having active roles as sacred objects in Buddhist ritual practices.

Manuscripts

The importance of books (used as a general term here for texts committed to writing) in Tibetan Buddhist culture is evident in the traditional legend of how Buddhism first appeared in Tibet: the miraculous descent of books and other religious objects from the sky during the reign of an early king. According to the legend, King Lha tho tho ri was unable to read, and sealed the received books away for future generations (see Richardson, 1998; Stein, 1985). The Tibetan tradition places the advent of reading and writing in the reign of Emperor Srong btsan sgam po (r. 605[?]–649 CE), who is, unlike Lha tho tho ri, historically attested. This emperor is said to have sent his minister Thon mi Saṃbhota to India to find a model for the Tibetan alphabet. On his return, Thon mi Saṃbhota is said to have created the Tibetan alphabet from several Indian scripts, inventing six new letters for sounds that do not occur in Indian languages. In these traditional accounts, the invention of the Tibetan alphabet is linked to the formulation and writing down of the legal system, as well as the formation of the social hierarchy, division of the agricultural lands, and standardization of weights and measures (van Schaik, 2011).

Though there is no evidence for the historical existence of Thon mi Saṃbhota, the existence of writing and its use in the administration of the empire and the formulation of a legal code are confirmed by two entries in the *Old Tibetan Annals* for the years 654/655 CE and 655/656 CE (Dotson, 2009, 85). At this time, the main writing materials seem to have been stone and wood. Only in the year 744/745 CE do the *Old Tibetan Annals* mention the replacement of wooden slips (*khram*) with paper (*shog*). The use of wooden slips for communication in the Tibetan Empire was confirmed by the discovery by M. Aurel Stein in the early 20th century of hundreds of them in the Tibetan forts at Miran and Mazar Tagh in the Taklamakan and Lop deserts, dating from the late 8th to the mid-9th century – these are part of the Stein collection, now held at the British Library (Thomas, 1951). In central Tibet, the oldest surviving examples of writing are stone inscriptions on pillars and rock faces recording edicts from the imperial court. The earliest of these, the Zhol pillar in Lhasa, dates from the 760s CE (on the early inscriptions, see Richardson, 1985; Iwao, Hill & Takeuchi, 2009).

The Tibetan forts in the Taklamakan and Lop deserts also yielded large numbers of paper manuscripts, mainly documents concerned with administrative and military matters. However, a few Buddhist texts have also been identified among this material, including a copy of the *Saddharmapuṇḍarīkasūtra*, several prayers, tantric *sādhana*s, and a Chan text. Many more Tibetan manuscripts were discovered in the "library cave" at the Dunhuang cave complex, now in major international collections in London, Paris, Saint Petersburg, Beijing, and elsewhere (van Schaik & Galambos, 2012).

The Tibetan manuscripts from the Dunhuang caves date from the early 9th to the early 11th century. Some of these seem to have been brought from central and eastern Tibet (and these are among the earlier manuscripts), but most were created in the local region. In the first half of the 9th century, several hundred copies of the *Prajñāpāramitāsūtra* in 25,000 lines and the *Aparimitāyurnāmasūtra* were copied in Dunhuang at the order of Emperor Khri gtsug lde btsan (also known as Ral pa can; r. 815–841 CE). These were created in scroll form, with the

© Koninklijke Brill NV, Leiden, 2015
Also available online – www.brill

Tibetan text arranged into columns so that the scroll could be read horizontally, in the same way as Chinese scrolls. However, due to the direction of writing Tibetan, the scrolls are read left to right, unlike Chinese scrolls (Iwao, 2013). The *Prajñāpāramitāsūtra* texts were copied in scroll form and in the oblong loose-leaf form known as "*pecha*" (Tib. *dpe cha*; Skt. *pothi*). The local scribes used manuscripts that had been brought to Dunhuang from (probably eastern) Tibet as models for copying. Thus, the same manuscript formats and similar writing styles were in use in other parts of the Tibetan Empire in the early 9th century. Furthermore, other examples of these manuscripts, also copied in Dunhuang, have been found in the libraries of several monasteries in central Tibet, indicating that they were distributed after copying in Dunhuang (Ma De, 2009).

These early examples of the *pecha* form are paradigmatic for Buddhist manuscripts throughout the later history of Tibet. They are based on Indic palm-leaf manuscripts and are oblong and loose leaf; they usually have ruled margins and guidelines and often a string hole surrounded by a circle (for detailed analysis of one such manuscript, see Cantwell & Mayer, 2012; see also below).

Along with the horizontal scroll and *pecha* forms, early Tibetan manuscripts were written on vertically oriented scrolls, manuscripts in concertina format, stitched codex manuscripts, and single sheets of paper. There is some connection between genres of text and particular formats: major scriptural texts tended to be written as *pecha* manuscripts; collections of ritual texts were often in concertina format; the codex was often used for miscellaneous collections of short texts gathered together in a portable format. The discovery of manuscripts from around the 10th century in a stūpa in the Gatang region in central Tibet shows that the codex form was well distributed at this time (Pasang, 2007).

From the 11th century onward, the *pothi* or *pecha* became the standard format for Buddhist texts, with the other formats declining, though not disappearing. The concertina and codex form continued to be used, generally for relatively inexpensive manuscripts intended for personal use. The scroll form remained in use mainly for official documents. The manuscripts found in Tabo Monastery (Himachal Pradesh) have provided the largest group of material for the study of this period in the development of manuscript culture. The Tabo manuscript date from the 11th to 17th centuries, and represent the western Tibetan manuscript tradition. Among the earlier manuscripts, proto-canonical collections of scriptural texts have been identified (Pagel, 1999; for a catalogue, see Scherrer-Schaub & Harrison, 2009).

By the 13th century, more ornate forms of the *pecha* were being made, including the use of silver and gold inks on a dark blue ground (*mthing shog*), and a more elaborate use of illustration (Scherrer-Schaub & Bonami, 2002). Apart from gold and silver, precious and semiprecious materials – such as turquoise and coral – were also used in inks. Other features found in these high-status manuscripts include large ornate lettering on the first folio, sometimes raised in high relief, and elaborate interlocking key decorations around the text and miniatures (Helman-Ważny, 2014, 76–94).

These expensive, high-status manuscript productions are often multiple-volume sets of the canonical collections of the words of the Buddha, the Kanjur (*Bka' 'gyur*) and their Indic commentaries, the Tanjur (*Bstan 'gyur*), and the alternative canons of the Rnying ma and Bön schools. Single manuscripts in this style are usually of a few popular *sūtras*, including the various lengths of the Prajñāpāramitā *sūtras* and the *Bhadrakalpikasūtra*. These manuscripts are often large, measuring some 60–90 cm in width (Cüppers, 2010). Less expensively produced manuscripts, smaller in size and often without illustration, were made for a much wider variety of Buddhist texts, including ritual works, philosophical treatises, and biographies. Manuscripts remained in production in Tibet in equal or greater numbers than printed texts through to the early 20th century (for examples, see Helman-Ważny, 2014, 64–75).

Printing

As with manuscripts, the oldest surviving examples of printing in the Tibetan script are from eastern Central Asia. The technology of printing in the Tibetan alphabet seems to have first been developed in the Tangut Kingdom, where the influence of Tibetan Buddhists was increasingly evident throughout the 12th and early 13th centuries. In the early 20th century, Tibetan manuscripts and block prints were recovered from the ruins of the Tangut city of Khara-Khoto, mostly dating from the 12th and 13th centuries (now kept at the Institute of Oriental Manuscripts of the Russian Academy of Sciences, Saint Petersburg, and the British Library; Iuchi, forthcoming).

These early block prints are in three forms: the *pecha* format, codices, and single sheets. The codices are compendia of ritual texts such as *dhāraṇīs*, while the single printed sheets contain diagrams printed for ritual purposes such as divination and warding off evil influences (Shi Jinbo, 2005; Stoddard, 2010). Since the technology of woodblock printing was also used in Khara-Khoto to print manuscripts in the Chinese and Tangut scripts, it is likely that local printing techniques were adapted to the Tibetan script (Helman-Ważny 2014, 116–125).

The printing of Tibetan Buddhist texts increased during the period of Mongol rule over Tibet and China (1271–1368), often sponsored by queens at the Mongol court, and printed at Dadu, the capital of the Yuan dynasty on the site of modern Beijing. Texts associated with the Sa skya school, especially the key works of Sa skya Paṇḍita (1182–1251), were printed, as were several *tantras*, such as the *Kālacakratantra* and *Guhyagarbhatantra*. This activity began in the late 13th century and continued to the end of the period of Mongol rule, and all of these printed books, known in Tibet as *hor par ma* ("Mongolian prints") share certain features, including Chinese page numbers, which were probably added for the convenience of the Chinese printers. Several of these Mongolian prints have been identified in the collections of Tibetan monastic libraries (van der Kuijp, 1993; Sangpo, 2010).

Another site of Tibetan printing activity in the late 13th century was modern Gansu province, where a commentary on the *Hevajratantra* by Sa skya Paṇḍita's successor 'Phags pa (1235–1280) was printed in 1273. There are also references in Tibetan literature to the printing of books in eastern Tibet as early as the beginning of 13th century, though there is currently no extant physical evidence of this activity (van der Kuijp, 2010, 453–455).

Fragments of printed books from the time of the Mongol Empire were recovered from the Central Asian sites of Turfan and Etsin Gol, and are now at the Berlin State Library (Taube, 1980). These show that a wide range of printed material was in circulation, alongside *pecha*-style books of Buddhist scriptures, including a concertina manuscript and single sheets of prayers printed under the image of a deity. Also found among these materials are smaller stamped papers with mantras or the classic *ye dharmā* formula encapsulating the Buddha's teaching. This Tibetan material was found among printed and stamped papers in other languages, including Chinese, Sanskrit, and Uighur, and some of the Tibetan prints are multilingual.

The earliest surviving printed book from central Tibet is dated to 1407, a commentary on the *Abhisamayālaṃkāra* by Haribhadra, printed under the aegis of the local ruler of La stod Lho region, Situ Lha btsan skyabs, to commemorate the death of his father Situ Chos kyi rin chen (d. 1402). The colophon celebrates Situ Chos kyi rin chen in terms of his similarities as a ruler to Kublai Khan, suggesting that this early printing activity in central Tibet was conceived on the model of Kublai's sponsorship of the printing of Tibetan Buddhist texts (Diemberger, 2014). The Yongle Kanjur, the first printed Tibetan canonical collection, was produced in 1410 in Beijing (Silk, 1996). In the 1420s and 1430s, the collected works of Tsong kha pa (1357–1419) were printed with the sponsorship of the ruling house of Phag mo gru pa (Jackson, 1989, 1990; Sernesi, 2010). The production of printed books increased throughout the 15th century, with the establishment of many small printing houses (*par khang*) in central and western Tibet (Ehrhard, 2000). In the late 15th century, books of the life and songs of the hermit Mi la ras pa (also known as Milarepa; 1052–1111/1123) were printed and achieved wide circulation thanks to the activities of the *yogin* and devotee of Mi la ras pa, Gtsang smyon Heruka, his consort Kun tu bzang mo, and his disciples (Ehrhard, 2010; Sernesi, 2011; Clemente, 2007).

With the development of larger printing houses in the 17th and 18th centuries associated with particular Tibetan monastic establishments, printing activities became increasingly sectarian. This was particularly evident during the Ganden Podrang government established by the fifth Dalai Lama in the 17th century, during which printing activity was concentrated on the core texts of the ruling Gelug school, with the printing blocks of certain rival schools embargoed (Smith, 2004). Partially in response to this, the 18th and 19th centuries saw a major increase in the number and size of printing houses in eastern Tibet, in which existing and new collections of texts largely from the non-Gelug schools were printed. The printing house at Derge was particularly important and remains one of the largest of its kind (for a nicely illustrated volume, see Jin Ping, 2006). Several traditional printing houses are active in Tibetan cultural regions of China, as well as in Nepal, Bhutan, and India in the present day and are continuing to produce *pecha*-style books, although the modern codex-style book is becoming more popular.

Writing Style and Layout

The Tibetan script is based on the Indic Brahmi alphabet, in particular, the late Gupta style prevalent in northern India and Nepal in the 5th and 6th centuries, with elements of the early Siddhamatrika style from the 7th century (van Schaik, 2011; Scherrer-Schaub, 2012). It is written horizontally from left to right and has two main forms of punctuation, a syntactic separator in the form of a vertical bar known as *shad*, and a syllable separator in the form of a dot (elongated in some writing styles) known as *tsheg*. Just as certain manuscript forms were preferred for particular textual genres, as the scribal tradition developed in Tibet, the most important distinction in script styles was between the headed style of script (*dbu can*) used for Buddhist scriptures and other high-status texts, and a number of headless styles (*dbu med*) used for noncanonical Buddhist writing such as treatises and biographies. The highly cursive style known as *khyug* was (and still is) mainly used for letters and official documents. An elaborate cursive style with long descenders was used in the period of Mongol rule for official documents. With the development of printing, the headed style was used in the carving of woodblocks for its greater legibility.

The *mise-en-page* or layout of the text and other elements of the *pecha* manuscript page changed little through the history of Tibetan manuscripts. In most cases, vertical margins and horizontal writing guidelines were drawn before the manuscript was written. Often a hole was made in the page and surrounded by a circle; this could be a single hole in the middle of the page, or to one side, or two holes to either side. This feature was adopted from the conventions of Indic palm-leaf manuscripts, in which a string was threaded through the hole in order to hold the pages together. However, while palm-leaf manuscripts require tying because of their size and shape, paper manuscripts do not; the early manuscripts often have holes, though in most cases, there is no evidence that a string was threaded through them. In later manuscripts, from the 14th century onward, the hole was often replaced by an inked dot (Scherrer-Schaub & Bonami, 2002). Thus it seems that from an early stage, the string hole in Tibetan manuscripts functioned as a symbolic indicator of sacred status, adopted from Indic Buddhist manuscripts.

Margins and guidelines were usually made with faint black or red ink. Except in the case of gold and silver writing on a dark background, the usual color for text is black, with rubrication used to highlight specific aspects of the text, such as the main text in commentaries or the names of cited texts. Interlinear annotation, known as *mchan 'grel*, is seen in manuscripts from the 9th century onward and is usually in a small cursive form of the script. Interlinear annotation may be added to a commentary contained in the main text. It is linked to the activities of teaching and study and is not usually found in manuscripts produced as status objects, such as illuminated canonical collections.

In most manuscripts, the beginning of the text is marked with a feature known as *mgo yig*, literally the headletter. The simplest form of this mark is a curl opening to the left, a form derived from Indic manuscripts and inscriptions. In Tibetan manuscripts from the 10th century onward, more elaborate forms appear, adding further curls. In some manuscripts, the *mgo yig* appears at the beginning of the text on each recto side of the manuscript, regardless of whether a new text begins at that point. In early manuscripts, page numbers appear in the left margin, in the form of letters in various sequences, and numbers written as words (La Vallée Poussin, 1962, xv–xvi). Arabic-style numerals do not appear before the 12th century. In later manuscripts, the most common standard is for the volume to be represented by an alphabetic letter, followed by the page number. Along with this, an abbreviated form of the title of the text (or collection of text) may appear in the margin.

Over the following centuries, a relatively stable format and *mise-en-page* were developed for high-status manuscripts of Buddhist scriptures. These manuscripts have a title page made of several layers of paper stitched and glued together for strength, with the first few syllables of the text written in large size in gold or silver on a dark blue background, often protected with a rectangular piece of silk brocade, fixed at the top edge. Illuminations showing Buddhist deities or sages are placed to both the left and right of the text, and sometimes in the center as well. The following page, or several pages may be in the same format, with the text written in a smaller size. After this, the pages usually revert to black ink on an unpainted background, although the style of silver and/or gold on black is sometimes used throughout a manuscript. The final page of a manuscript often includes illustrations of one or more wrathful protector deities.

layout. From the early Mongolian prints onward, printed books of high status sometimes include woodcut illustrations on the early pages, which may be hand colored. The very earliest printed books copy the string holes and circles of Buddhist manuscripts (Diemberger, 2012, 24). Later developments include doubled margins, creating a more clearly defined space around text and images (Erhard, 2000).

Materials and Functions

During the Tibetan Empire, stone, wood, and paper were all used as supports for writing. The use of different materials was generally determined by the function of the text: stone for major edicts and proclamations, wood for very brief administrative notes and military communications, and paper for these functions and all others. Paper, the manufacture of which was probably learnt from China and Central Asia, came into general use in the mid-8th century, and the earliest surviving examples date from the late 8th or early 9th century. Paper-fiber analysis has shown that different types of paper were produced in different areas, based on the availability of raw materials. Among the Central Asian manuscripts, those produced locally are generally made from rag paper, those that were made in central Tibet are constructed from Daphne or Edgeworthia fibers (Tib. *shog shing* or *dung lo ma*), and those produced in eastern Tibet were made from the bark of the paper mulberry (bot. Broussonetia).

In later centuries, most paper was made from Daphne or Edgeworthia fibers, or from the Stellera chamaejasme species (Tib. *re lcag pa*) and, more rarely, Euphorbia fisheriana (Tib. *re lcag gi rtsa ba*). The latter two are derived from the root of the plant and were generally used at higher altitudes, where Daphne or Edgeworthia was not available. Paper was generally made on fixed-wove molds, with the paper left to dry in the frame, unlike Chinese paper, which was made on a sieve mold from which paper sheets could be removed to dry. Thus Tibetan paper differs from Chinese in both materials and method (Helman-Ważny & van Schaik, 2013).

To make the paper surface suitably smooth for writing on, it was rubbed with wheat or barley powder. From the 11th century onward, dark blue paper was made by dying or by painting with a pigment like azurite. Though traditional sources refer to the blue paper as lapis lazuli, this material, which was extremely expensive, was probably only rarely used in this way. Finally, manuscripts were often placed between wooden boards, which could be elaborately carved, and secured with leather straps and/or wrapped in square textile covers (Selig-Brown, 2012; Helman-Ważny, 2014, 56–8). Books kept in libraries are usually identified by an inscribed textile strip that hangs down on one side. Textile writing supports were also used for manuscripts, though less frequently than paper. Silk was used for official edicts, hung or rolled up in scroll form. *Thangka* paintings, usually on silk or cotton, were often inscribed on the back, and sometimes on the front as well.

Scribes wrote using wooden or reed pens; an early 9th-century split-nibbed wooden pen was found in the Tibetan fort at Mazar Tagh (van Schaik, 2011, 56). Ink was, in most cases, made from carbonized plants or soot (lampblack) mixed with animal glue. Various pigments were used to create the red ink used for margins and rubricated texts in the manuscripts, including cinnabar, lead, zinc, and copper (van Schaik, Helman-Ważny & Nöller, 2015). Manuscripts written on blue paper used inks composed in part from silver and gold. A variety of other pigments were used in manuscript illumination.

Printing blocks were usually carved from locally available wood sources. The techniques for preparing blocks and printing from them are closely based on those found in earlier Chinese and Central Asian printing. First the individual blocks are cut to size. Scribes copy the text onto thin sheets of paper, which are placed face down on the printing blocks. Then a carver cuts out around the letters to create a finished block with letters, margins, and/or images in high relief. The blocks are checked, and errors can be corrected by the removal and replacement of a portion of the wood. Completed blocks are brushed with ink, before blank sheets of paper are pressed against them to take up the ink of letters (Helman-Ważny, 2014, 125–132).

Manuscripts and printed books were used in a variety of ways in Tibet. Their functions were not limited to the texts that they carried; as *gsung rten* ("the basis of [the Buddha's] speech") they embodied the sacred power of the Buddhist teachings in their physical presence and could be agents in ritual activity (Diemberger, 2012). Since many books were created for the purpose of generating merit, as mentioned above, often the function of a book after it had been created was simply as a receipt for merit, recorded in the colophon and guaranteed by the continuing physical existence of the book. Some books might serve as the means to generate further merit through recitation. On the one hand, monasteries in Tibet aimed to house at least one complete set of the

Kanjur and Tanjur, and the mere presence of these volumes in the monastery was considered to be highly auspicious, regardless of whether they were read. On the other hand, the recitation of the entire collection was considered an especially meritorious activity. The recitation of certain *sūtras*, particularly one of the versions of the *Prajñāpāramitāsūtra*, could be sponsored in order to accomplish various ends, such as warding off illness.

The physical copies of the Kanjur and Tanjur could also be used for ritual purposes that did not involve reading; for example, the entire set of volumes might be carried in a ritual procession. Furthermore, books were considered to have ritual efficacy largely unrelated to the texts therein, and they could be used for magical purposes such as ensuring a good harvest. Other manuscripts and prints that were created for merit-generating and apotropaic purposes were single sheets containing Buddhist prayers or magical diagrams, which could be worn for protection, or placed in a suitable position in the house, usually above the front doorway. Prayer flags perform a similar role. Printed texts were also placed inside statues and stūpas in the ritual of consecration, and placed inside wheels to be turned by hand or by water (Bentor, 1996).

Many manuscripts and prints were created for specific ritual functions. Manuscripts are often miscellanies of ritual texts for medical, funerary, and other uses. These are usually of a portable size, sometimes stitched to make them easier to consult. Larger collections of tantric texts containing rituals for ceremonies of blessing, granting permission, and empowerment are read by the lama performing the ritual. Similar texts, or text collections, are used by practitioners in the course of their regular recitation practices. In all cases, books, or even book fragments, are treated as objects worthy of reverence, and Buddhists frequently advise their students on the proper treatment of books; for example, they should be kept on high shelves and never stepped over or on.

In monasteries where texts are taught and studied, manuscripts and printed books provide the basis for this work. Since memorization was central to the practice of learning, the book provided the basis for the memorization of a text. Books, often annotated with interlinear notes, played a role in the practice of teaching, usually through oral commentary on the text contained in the book. The ritual recitation of the text also served the purpose of authorizing students to study the text themselves. This transmission through reading is known as "spoken transmission" (*ljags lung*) or "book transmission" (*dpe cha'i lung*), or simply "transmission" (*lung*). This transmission establishes the student and teacher in a lineage traced back to the text's source, which in many cases will be the Buddha Śākyamuni himself.

The practice of note taking is attested in a number of manuscripts from the Dunhuang library cave that appear to contain students' notes and others that show signs of being taken down from dictation (Kapstein, 2006; van Schaik 2007). Furthermore the many texts of instruction called *zin bris* or *brjed byang*, referring to their origin as students' notes, suggest that the practice was common from the 11th century onward. An interesting specific case is the **Lakṣaṇaṭīkā*, a student's notes on the treatises of Candrakīrti taken by a Tibetan in the Indian monastic university of Vikramaśīla, in the Sanskrit language but in Tibetan script (see Yonezawa, 2004ff.). In Tibet, through to the 20th century, children learning to write used a wooden board painted black, on which letters could be written and erased.

Social Context

Tibetan rulers, explicitly modeling themselves on their imperial predecessors, often sponsored major manuscript and print-copying projects. As late as the 20th century, the 13th Dalai Lama began a project to carve new blocks for the Buddhist canon on his return from exile in India, resulting in the "Lhasa Kanjur" (Vogel *et al.*, 1998). The sponsorship of the copying of scriptures is often mentioned in biographies of Tibetan lamas alongside other meritorious projects such as the establishment or refurbishment of monasteries and the building of stūpas. Very large sums were spent on scripture-copying projects. For example, a complete set of manuscripts of the Kanjur produced in central Tibet in the 17th century cost 300 kg of silver (*dngul srang*) for 114 volumes (Cüppers, 2010, 125). A complete set of block prints of the Kanjur made in Derge in the 18th century, comprising 103 volumes and requiring the carving of 66,000 wooden blocks, cost 7,622 ingots of gold, roughly equivalent to 1,275 kg of silver (Schaeffer, 2009, 105; see also Chaix, 2010).

There is no evidence that there was ever a significant book market in Tibet: rather manuscripts and printed books were created according to demand, directly funded by donations from sponsors (Diemberger, 2012, 33). The creation and circulation of Buddhist manuscripts and printed books in Tibet, as elsewhere in the Buddhist world, must

e that there was ever a sig- in Tibet: rather manuscripts were created according to ed by donations from spon- , 33). The creation and circu- nuscripts and printed books in the Buddhist world, must

be understood in terms of the concept of merit, a causal force with positive effects including lengthening one's lifespan and ensuring a good rebirth in the next life. The merit gained by copying scriptures, mentioned in several Mahāyāna Buddhist texts, is considered to be gained not only by the scribe but also, and even more so, by the one who sponsors the creation of the manuscript. The names of sponsors are generally recorded in colophons; the greater the expense and the magnificence of the finished product, the greater the merit generated for the sponsor.

Documents from Dunhuang relating to the manuscript-copying project commissioned by Emperor Khri Gtsug lde btsan in the 9th century show how such projects were organized. Scribes were provided with allotted stacks of paper and expected to return these with the text copied in, with a small allowance for spoiled pages. Those who could not account for their pages could be punished through corporal punishment or confiscation of their property. These manuscripts were then checked by a proofreader (*zhus pa*) responsible for a group of scribes. At this stage, any pages with too many errors were removed and had to be rewritten. These pages might then be checked again by another proofreader. A supervisor (*gnyer pa*) responsible for all of the local scribes collected the resulting manuscripts and dealt with any infringements and punishments (Takeuchi, 1994). Though commissioned by the emperor, the whole endeavor was funded from local taxation (Iwao, 2009). The use of punishment and local taxation to fund Buddhist scripture-copying projects did come to be perceived as a problem, and later accounts of such projects emphasize the fair treatment and remuneration of workers (Schaeffer, 2009, 105), though in central Tibet at least, book production was still supported by local taxation in the 17th century (Cüppers, 2010, 122).

The imperial model remained an inspiration to later manuscript-copying projects. A colophon from a Tanjur-copying project in the 14th century shows that little changed over the centuries; the list of those involved includes the same roles of scribe, proofreader, and supervisor seen in the 9th-century records. The 14th-century colophon also mentions several other figures, including papermakers (*shog bzo ba*), page numberers (*grangs yig pa*), and collators (*gras mkhan*) as well as those who worked on the book covers, carvers (*rkos mkhan*), goldsmiths (*gdong rkos kyi gser bzo mkhan*), strap makers (*sku rags mkhan*), and blacksmiths who made the buckles for the straps (*sku rags kyi chab ma'i mhar ba*). A letter to the head scribes on another copying project by Bu ston Rin chen grub (1290–1364) provides further details of the copying process in his time – for example, that the proofreading process involved a reader reciting the text aloud while the scribes checked their copies. Bu ston's letter also sets out aesthetic standards for manuscript production and mentions a method of correction seen as early as the Dunhuang manuscripts: pasting a piece of paper over the erroneous text and writing the correct text on top of it. The importance of the patron, and the fact that the manuscripts are to be considered his property, is stressed by Bu ston as a reason for the high standards expected of the scribes (Schaeffer, 2009, 21–27).

The cataloguing and editing of texts have been a feature of the Tibetan Buddhist tradition from an early stage. The major monasteries in Tibet all had libraries, with some, such as the libraries of Sakya and Ganden monasteries being famous for their extensive collections of Tibetan and Sanskrit manuscripts. The first catalogues of library holdings date back to the early 9th century, two of which are still extant: the *Ldan dkar ma* (alternatively spelled *Lhan kar ma*) and the *Phang thang ma* (for editions, see Lalou, 1953; Herrmann-Pfandt, 2008; Kawagoe, 2005). These are relatively simple lists of text titles, authors, organized thematically. The size of each book is also listed in terms of "verses" (*shlo ka*) and "volumes" (*bam po*). It has been pointed out that these terms were not always used literally, as *shlo ka* are also counted in prose texts and *bam po* does not necessarily correspond to physical volumes in the early manuscripts. One possibility is that *bam po* refer to the units of paper assigned to a scribe and were used to calculate scribes' pay (Scherrer-Schaub, 1989; van der Kuijp, 2009).

Later catalogues from the 13th and 14th centuries, such as the catalogue used as a basis for compiling the Buddhist canon by Bu ston, are more discursive and include elements of text criticism (Nishioka, 1980–1983). Tibetan scholars have been very much aware of problems deriving from scribal errors and other issues of faulty textual transmission (several examples of textual criticism are discussed in van der Kuijp, 2010). The scholar and editor Zhus chen Tshul khrims rin chen (1697–1744) recorded in detail his editorial work on a major project of carving new printing blocks for the Buddhist canon commissioned by the king of Derge in the first half of the 18th century. Zhus chen discusses the multiple sources that he assembled for this task and criticizes many of them in strong terms, blaming inaccuracies on the faults of scribes as well as on the misguided emendations of previous editors. In order to avoid further corruption through misguided scribal corrections, Zhus chen imposed fines if scribes could not show that their emendations were based on an alternative exemplar. Zhus chen himself and other supervising editors were allowed to make emendations, and Zhus chen occasionally used Sanskrit manuscripts to clarify problems encountered in the Tibetan texts (Schaeffer, 2009, 94–103).

Manuscripts and Printing: East Asia

Although historically East Asia has been an arena where ethnically and politically diverse states alternated with one another, from the point of view of the history of Buddhism the region refers to an area now largely covered by China, Japan, Korea, and Vietnam. Having said that, it is important to keep in mind that this division reflects the modern geopolitical reality, according to which state boundaries and national identities separate ethnically, culturally, and linguistically distinct regions. Diachronically, however, the situation was much more complex, as states, ethnicities, and languages interacted in a variety of ways. The languages and scripts used in the region today are merely the current state of affairs, which will no doubt continue to evolve in the future.

The written tradition of Buddhism in East Asia has been dominated by texts written in Chinese, and this shared tradition in turn helps to define the cultural boundaries of the region. The role of the Chinese language and script in this part of the world cannot be exaggerated, as it was used not only in the context of Buddhism but also for the spread of other cultural influences, most notably Confucianism. At the same time, the transmission of religious texts was also one of the primary reasons why the Chinese script was adopted as a writing system for a variety of languages in East Asia. Moreover, the majority of cultures that invented their own script did this either by modifying Chinese characters (e.g. Jpn. *kana*, Vtn. *chữ nôm*, and Khitan large script) or by drawing inspiration from them (e.g. Tangut and Khitan small script), while at the same time, they also continued to use Chinese texts. As a result of the overall dominance of the Chinese textual tradition and the Chinese writing system in East Asia, the material culture of Buddhist texts also largely follows the Chinese model.

There is no scholarly consensus regarding the time when Buddhism was first introduced in China, but it must have happened no later than the 1st century CE, that is, the second half of the Eastern Han dynasty (Zürcher, 1990; Rong, 2004). Translations of Buddhist literature appear from the mid-2nd century CE (Nattier, 2008), including works by renowned translators such as Lokakṣema (active during the late 2nd cent. CE) and Kang Senghui (d. 280). In terms of archaeological material, however, the earliest surviving Buddhist manuscript written in Chinese dates to the late 3rd century and was discovered in 1908 at Toyuq near Turfan by the second Ōtani expedition. This is a fragment of the *Zhu Fo yaoji jing* (諸佛要集經; T. 810 756b20) translated by Dharmarakṣa with a colophon dating it to 296 CE (Inokuchi Taijun, 1980, 1–2, Plate 1; Ikeda On, 1990, 74; Okabe Kazuō, vol. I, 1983, 21–24; Chen Guocan, 1983, 6–13; Boucher, 1996, 80–81; Zacchetti, 2006, 165–167).

The majority of manuscripts dating to periods before the Song dynasty (960–1279 CE) survived in a sealed library cave at a Buddhist temple complex near the town of Dunhuang, at the eastern terminus of the so-called Silk Road. This is the single-largest collection of manuscripts from medieval China, and most of these are Buddhist texts. This is partly due to the fact that the collection most likely represents the original library of the Sanjie Monastery (三界寺) in the late 10th century (Rong, 2013, 119–130). But another reason behind the large proportion of Buddhist texts among surviving manuscripts is the tradition of *sūtra* copying for the sake of accumulating merits. The colophons of the manuscripts demonstrate that many of the scrolls found in Dunhuang were the result of such activity, and people either copied the *sūtras* themselves or hired professionals to do so (Ikeda On, 1990; Lin Congming, 1991, 290–308). *Sūtra* copying was not merely a mechanical process of creating a new copy of a *sūtra* from an existing scroll but – at least in theory – a spiritual undertaking in which the process of production was just as important as the end result. Especially in Japan, a strong emphasis was laid on the purity of the copying process, as the writing materials, the copyist, and the place all had to be void of contamination (Lowe, 2012). The colophons of the medieval manuscripts also reveal that many of the *sūtras* were produced "for the benefit" of deceased parents or children, in order to accumulate merits for family members or for the sake of all sentient beings (Giles, 1935a; 1935b; 1937; Ikeda On, 1990). Judging from the manuscripts with colophons, such offerings represented a sizeable portion of a medieval monastic

Surviving Buddhist texts in China are predominantly on paper. In fact, the spread of paper more or less paralleled the spread of Buddhism in China, showing the intimate connection between technology and religion. Paper appeared in China already before the Common Era but is believed to have come to be used as a writing material only around the 1st or 2nd century CE (Tsien, 1962, 38). By the end of the 4th century, when we begin to have significant quantities of manuscripts, paper had almost completely replaced wood, silk, and other writing materials. Thus, while it is probable that some of the early translations of Buddhist texts were written on wood or silk, the oldest surviving Buddhist texts in Chinese are all written on paper. There are also individual instances of Buddhist *sūtras* written on silk scrolls, but these seem to have been created in imitation of paper scrolls and are more closely related to medieval silk paintings than to the earlier tradition of writing on bamboo and silk. On one of these scrolls (*Pelliot chinois* 4500), the brush-written characters are also embroidered over with silk thread, attesting to the extraordinary amount of work that went into the production of the object.

The origins and early spread of printing technology are intimately connected with Buddhism (Drège, 1999, 25–26; Barrett, 2008, 134–135). In fact, the earliest surviving examples of printing are predominantly Buddhist texts, even if this does not necessarily mean that other types of texts were not printed at this time (Chia & Weerdt, 2011, 2). Copies of the *Hyakumantō darani* (百萬塔陀羅尼) commissioned by the Japanese Empress Shōtoku (称徳; 718–770 CE) in the 760s are understood as the earliest printed texts that can be dated with certainty (Kornicki, 2012). Some scholars claim that the *dhāraṇī sūtra* (*Wugou jingguang da tuoluoni jing* [無垢浄光大陀羅尼經]) found in 1966 at the Pulguksa Temple (佛國寺) in Korea is older, but, as P. Kornicki points out, its date is "open to argument" (2012, 48). The surviving pieces of evidence underline the vital role of Buddhism in the origins of printing. The mass scale of the application and spread of this technology may be connected with the rule of Empress Wu Zetian (武則天; r. 690–705 CE), who relied on Buddhism in her efforts to win legitimation (Barrett, 2008). In turn, the fact that printing was connected with her – and with Buddhism – may have been the reason why, after the restoration of the Tang dynasty in 705 CE, the technology remained largely unused, especially by the state (Welch, 1981, 41, 115; Barrett, 2008). Thus in the Dunhuang corpus, the majority of the materials in which come from the 9th–10th centuries, well after the invention of printing, the number of printed texts is negligible. Even after the use of printing became widespread in the early Song, manuscript culture did not disappear but continued as an important tradition (McDermott, 2005, 90–93; see fig. 1).

When Buddhist scriptures were translated from Indic languages into Chinese, besides the obvious process of linguistic adaptation, texts were also converted to a new medium and format. Throughout the medieval period, Chinese sources continue to refer to texts in *pothi* format (*fanjia* [梵夾]; a book form originating from palm-leaf manuscripts, although other materials, e.g. paper, were also used in later periods) being brought from India to China, yet the Chinese versions are habitually referred to as scrolls (*juan* [卷]), even after the appearance of other bookbinding formats. Thus the scroll has been the archetypal book form throughout Chinese history. Its physical format most likely derives from the rolls in use during the Warring States and Qin and Han periods, which were made from parallel slips of bamboo or wood and then tied together into a continuous writing surface. Medieval paper scrolls seem to have emulated this format not only in being rolled up but also by ruling the paper with vertical gridlines that resembled the parallel slips of bamboo rolls.

The standard *sūtra* form is best exemplified by the *sūtras* commissioned by the Tang court. There are dozens of such examples among the Dunhuang materials, and it is clear from the colophons that, even though the entire collection was found in what used to be a distant corner of the empire, these texts had been produced in the capital and only subsequently sent to other provinces. A court-commissioned *sūtra* was invariably written in a beautiful and even calligraphy with great attention to the aesthetic appeal of the manuscript. The scroll itself was produced with equally great care, as if it were an artifact in its own right. It consisted of rectangular sheets of paper that had been dyed with a yellowish dye, which also acted as an insecticide to prevent damage. The sheets were glued together into a long band of paper up to several meters long, depending on the length of the text to be written on it. At the end of the scroll, the corners of the last sheet were cut off, and to this narrowed end, a wooden or bamboo stave (*zhou* [軸]) was attached so that the scroll could be rolled up more easily (Fujieda, 1966, 16–19; Tsien, 1962, 155). The beginning of the scroll was enforced with extra paper to which a ribbon or cord

was attached, in order to tie the scroll and prevent it from unrolling.

In addition to the physical form of the scroll, the layout of the standard *sūtra* was also regularized. Each paper sheet contained 27–29 vertical lines of text, and each line had exactly 17 characters. Horizontal lines were drawn across the top and bottom of the sheet, thereby creating top and bottom margins, which were left empty. The sheets had no side margins, and vertical grid lines drawn between the top and bottom horizontal lines continued from one sheet to another so seamlessly that today it is sometimes difficult to see where the sheets are glued together without examining the original manuscript. The title of the text was written at the beginning and end of the scroll, with characters tightly crammed together in order to visually set it apart from the main text. Typically, the beginning of the scroll had the complete title, while the end contained only an abbreviated one. The title was

rizontal lines continued from r so seamlessly that today it is to see where the sheets are hout examining the original e of the text was written at the of the scroll, with characters ether in order to visually set it h text. Typically, the beginning complete title, while the end abbreviated one. The title was also written on the outside of the rolled-up scroll, so that it could be identified without having to unroll it (Fujieda, 1966, 17–18).

In standard *sūtras*, the text was usually followed by a colophon, recording information relevant to the production of the scroll (Drège, 2007). For example, the colophon of manuscript Or. 8210/S. 36, a copy of the *Diamond Sūtra* (see fig. 2), has a lengthy colophon, which states that the scroll was copied on the 19th day of the 5th month of the 3rd year of the Xianheng (672 CE) reign by a certain Wu Yuanli (吳元禮; Giles, 1957, 23–24; McMullen, 2013, 108). In addition, the colophon also includes a count of paper sheets used; a statement about the dyeing of the paper; the names of the first, second, and third editors; the names and affiliations of four further "detailed proofreaders"; and, finally, two supervisors. This attests to the great care with which each scroll was produced and the number of persons and institutions that this elaborate process involved. Naturally, *sūtras* produced locally by ordinary people or hired monks were less regulated, and their colophons were also much shorter. About a thousand Dunhuang manuscripts have colophons (Fujieda, 1973, 121; Ikeda On, 1990), and the majority of these are quite simple, recording the time and name of the person making the copy and, less commonly, the reason for doing so. Occasionally we also find examples in which a colophon contains a more personal description of creating the scroll.

Within a monastic library, scrolls were often stored in larger bundles (*zhi* [帙]) wrapped together with *sūtra* wrappers (*zhizi* [帙子] or *jingzhi* [經帙]) made of silk or brocade (Fang Guangchang & Xu Peiling, 1995, 1–8; Fujieda, 1966, 19). When the Dunhuang manuscripts were first discovered, little attention was paid to their original arrangement, and when visitors to the library cave repeatedly examined the scrolls, the bundles were taken apart and the *sūtra* wrappers misplaced or lost (Rong, 2013, 115–127). As a result, a significant amount of information about the bundles and the overall arrangement of a medieval monastic library were lost. It is only much later that scholars realized the significance of these items and tried to collect what remained of the original *sūtra* wrappers and reconstruct the organization of the library (Rong, 2013, 112–115).

The large-scale production of texts also meant that manuscripts had to be stored, conserved, and, eventually, disposed of. Storage involved not only the safekeeping of the manuscripts but also an organizing system that would facilitate retrieval and use. Although the ways of storing manuscripts evolved over time and could also differ in various regions across East Asia, in general scriptures were stored in monastic libraries in bundles (*zhi*) or cases (*han* [函]), which were marked sequentially with the characters of the *Qianziwen* (千字文; Fang Guangchang, 1990; 1995). These characters – and occasionally the titles – would have been seen from the outside of the shelves or cabinets used to store the scriptures, enabling quick access without having to examine them individually. The complete Buddhist canon may have also been kept in a revolving *sūtra* cabinet called *lunzang* (輪藏; Jpn. *rinzō*) or *zhuanlun jingzang* (轉輪經藏; Jpn. *tenrin kyōzō*), typically an octagonal pagoda-like structure ostensibly invented in the 6th century, but which is mentioned in transmitted sources only starting with the 8th–9th centuries (Goodrich, 1942; Guo, 1999; Eubanks, 2010). The revolving *sūtra* cabinet primarily functioned not as a storage facility but a mechanical reading and praying device, since according to contemporary belief, rotating it around its axis accrued the same amount of merit as if having recited all of the scriptures stored within (Guo, 1999, 103–105; Eubanks, 2010, 7–12).

Manuscripts, and later printed texts, were also placed in relic deposits to ensure the survival of the dharma during the final age called *mofa* (末法; end dharma), and many of the surviving manuscripts have been discovered in such repositories (Shen, 2001). In these cases, the *sūtras* functioned as relics, representing both the body of the Buddha and his teachings. The consecrated scriptures could be enshrined in large pagoda-size stūpas, as in the eastern parts of the Khitan Liao Kingdom during the 10th–11th centuries (Shen, 2001), or buried in *sūtra* mounds (経塚; Jpn. *kyōzuka*), as it was customary as part of the *sūtra* burial (埋経; Jpn. *maikyō*) practice in Heian Japan (Moerman, 2007; 2010).

The scroll remained one of the major forms of book well into the Song period. Even printed texts used the same form, as it is seen in the famous printed copy of the *Diamond Sūtra* from the Stein collection at the British Library (Or. 8210/P. 2), dated to 868 CE (Wood & Barnard, 2010). Starting with the 8th century, however, along with the spread of Buddhist texts and culture, a number of other book forms were introduced, most likely as an influence from Central Asian manuscript cultures such as Tibetan, Uighur, Khotanese, or Sogdian (Galambos, 2012, 76–77). Thus Buddhism, and religion in general (e.g. Manicheism and Christianity), played a vital role in the spread of various technologies related to writing. A typically Buddhist influence is the *pothi* format, which appeared in Dunhuang from the late 8th century, after the Tibetans extended their control over the Hexi region, including Dunhuang (Men'šikov, 1988, 124). More common book forms were the concertina (Drège, 1984), notebook (Drège, 1979), codex, and the so-called whirlwind (*xuanfeng zhuang* [旋風裝]; Drège, 1996; Whitfield, 2004, 298; Du Weisheng, 1997) forms, which make up a sizeable portion of the total number of extant Chinese manuscripts (Fujieda, 1966, 24–27). These forms were, however, much more commonly used for manuscripts in other languages, such as Tibetan and Uighur, further testifying to their Central Asian origin.

Following the widespread use of paper, Chinese characters were typically written with a brush. In Dunhuang, however, which came under Tibetan control in 768 CE, the brush was replaced by the Tibetan-style hard pen, and manuscripts written after this date were almost all written with this type of pen (Fujieda, 1969, 37–39). However, in China proper, and in other East Asian regions, such as Korea and Japan, the brush remained the main writing utensil, even though it is likely that the hard pen was also used. The ink with which texts were written in East Asia was almost always black, and color ink was used only occasionally. Sometimes portions of manuscripts were written in red or orange, but this was relatively uncommon and appears only as an addition to a larger body of text written in black. A tradition specifically related to Buddhist culture is writing with one's own blood, thinned down with water (Kieschnick, 2000). Another typically Buddhist phenomenon evidenced in Korea and Japan is writing with gold or silver ink, typically on dark – for example indigo – paper (Mote *et al.*, 1988, 64). Sometimes the entire text was written in this manner, sometimes only the names of the Buddha or bodhisattvas, while the rest of the *sūtra* appears in black ink.

Punctuation and reading marks are quite common in the surviving texts. The marks were relatively uniform through different times, evidencing the continuity of the manuscript tradition throughout the dynastic period. Among the marks used in the Dunhuang corpus, the most common ones are those used to signify corrections, repetitions, abbreviations, divisions of text, and phonetic readings (Li, 1988; Ishizuka, 1970; 1981; 1993; Galambos, forthcoming). Reading marks became especially important in non-Chinese regions such as Korea and Japan, where they were used to facilitate parsing and reading the text, since written Chinese texts were often read (and pronounced) in Korean and Japanese, which have significantly different grammar and word order from Chinese (Frellesvig, 2010, 261–263; Ishizuka, 1995). Generally speaking, punctuation and reading marks were written in black or, less commonly, in red ink. There have also

Generally speaking, ng marks were written in in red ink. There have also

been "inkless" reading marks created by impressing the sharp edge of a pen or other instrument: these are called by their Japanese name *kakuhitsu* (角筆; corner pen), as they are primarily known to us from Japanese manuscript culture (Kobayashi Yoshinori, 1989; Girard, 2005). However, examples of *kakuhitsu* are known in Korea and even among the Dunhuang manuscripts in China (Kobayashi Yoshinori, 1997).

The script used for writing Chinese texts was, of course, Chinese. Yet it should be pointed out that Dunhuang, from where most of our surviving medieval manuscripts originate, was a cosmopolitan city along the Silk Road, at the intersection of different cultures and peoples. People of different ethnicities and languages intermixed on a daily basis, and most of the population must have been to some extent multilingual. The manuscripts provide evidence for widespread multilingualism, showing how people of various backgrounds wrote in a variety of languages and scripts (Takata, 2000; Galambos, 2012). There are many bilingual manuscripts with examples of Chinese *sūtras* transcribed phonetically using the Tibetan, Khotanese, or Brahmi alphabets, or combinations of these, attesting to the fact that individuals who could read these scripts, but not the Chinese script, nevertheless wished to recite Buddhist scriptures in the Chinese language. These phonetic transcriptions of Chinese characters have been used by modern scholars to reconstruct the northwestern dialect of Chinese during the 9th–10th centuries (Luo Changpei, 1933; Csongor, 1969; Takata Tokio, 1988). The opposite phenomenon is also found. In the 10th-century Sino-Tibetan manuscript IOL Tib J 754, for example, Chinese is used, in addition to writing Chinese, to phonetically transcribe Tibetan and Sanskrit words (van Schaik & Galambos, 2012).

Most of the Chinese manuscripts extant from the medieval period come from northwestern China, from the peripheries, or even beyond the borders, of the Chinese empires. This geographical imbalance is partly due to coincidence, but a perhaps even more important reason is the desert climate of the sites where the texts were found. The largest collection of Chinese Buddhist manuscripts comes from Dunhuang, the last major Chinese city along the Silk Road. In 1900, a Daoist priest who lived at the Mogao caves near Dunhuang discovered in one of the temple caves a hidden chamber that contained tens of thousands of manuscripts in Chinese, Tibetan, and other languages. The bulk of the collection was acquired from the priest by the Hungarian-born British explorer Aurel Stein (1862–1943) and was subsequently shipped to the British Museum (Stein, 1912, 182–194; Rong, 2013, 79–108). Other foreign explorers and scholars followed suit, and in several years, the collection became scattered around the world, with the most important portions held in London, Paris, Saint Petersburg, Kyoto, and Beijing. The cave had been sealed in the early 11th century, and the overall majority of the manuscripts comprised Buddhist texts, including *sūtras*, commentaries, works of popular literature, and documentation related to the life of the local Buddhist community. The vast quantity of manuscripts discovered at the library cave had a massive impact on the development of Oriental studies both in the West and in China and Japan (Rong, 2013, 205–266). In addition to the above-mentioned printed copy of the *Diamond Sūtra* from 868 CE, common printed Buddhist texts were one-leaf prayer models with an image of a buddha or a bodhisattva with a votive text beneath.

Catalogues have been compiled of the collections in Britain (Giles, 1957), France (Gernet & Wu, 1970; Soymié *et al.*, 1985–1995; Wang-Toutain, 2001), Russia (Men'shikov *et al.*, 1963–1967), and China (Chen Yuan, 1931; Fang Guangchang, 2013). There have also been attempts at compiling a union catalogue (Wang Zhongmin, 1962; Shi Pingting *et al.*, 2000), but to date this task has not yet been fully accomplished. Even though photographs of selected manuscripts appeared early on, such as the magnificent collection of Yabuki Keiki (矢吹慶輝) called *Meisha Yoin* (鳴沙餘韻; Yabuki Keiki, 1930), it was only from the 1960s onward, that microfilms of the French and British collections were released. The *Dunhuang Baozang* (敦煌寶藏) came out in 140 volumes with facsimile editions (from microfilms) of the main collections worldwide (Huang Yongwu, 1981–1986). This made it possible to study the manuscripts as a corpus, rather than just working on individual texts. Since 1995, the International Dunhuang Project based at the British Library has been digitizing the manuscripts and making them available online through their Web site – free of charge. As other holding institutions, such as the Bibliothèque nationale de France, joined the project, the number of manuscripts available through the Web site grew rapidly. Parallel with this, academic publishers in China began the publication of large multivolume editions of high-resolution photographs. The largest Japanese collections have also been published or are in the process of being published (Nogami Shunjō, 1965–1972; Oda Yoshihisa, 1984–2010; Kyōu shooku, 2009–2013). As a result, by now the majority of the Chinese contents of the original library cave are accessible to researchers.

Another major collection of Buddhist texts comes from the dead city of Khara-Khoto in Inner Mongolia. In the 11th–12th centuries, this was an important city in the Tangut kingdom of Western Xia (Xixia [西夏]), which was later abandoned. The ruins of the city were explored by the Russian explorer Piotr Kozlov (1863–1935), who passed through in 1908 on his way to Tibet. On two subsequent visits, he excavated over two thousand manuscripts and printed books written in Tangut, and many more in Chinese (Kozlov, 1923). He shipped the entire cache back to Saint Petersburg, and this became the largest collection of Tangut material in the world (Kychanov, 2008). Aurel Stein also visited the site in 1914 and secured a collection of about six thousand fragments, which are currently kept in the British Library (Stein, 1928, vol. I, 429–506; Grinstead, 1961). Most of the Tangut texts comprise Buddhist *sūtras* and other writings, as Buddhism from the very beginning was adopted as the state religion in Western Xia. In addition to the Tangut material, however, the site also yielded a significant amount of Chinese texts, both printed and handwritten. Catalogues of the Saint Petersburg collection of Tangut (Kychanov, 1999) and Chinese (Men'shikov, 1984) texts were published relatively early, but no catalogue yet exists for the British collection. Facsimxile publications of most of the non-fragmentary texts have come out for the Russian, British, Chinese, and French collections, even though the quality of reproductions in some cases is less than ideal. In addition, good-quality color images of a limited number of texts from the British and Russian collections have been made freely available through the International Dunhuang Project Web site.

Yet another important group of medieval Buddhist material are the Turfan texts – both handwritten and printed – from Xinjiang, China's westernmost region. The largest collection was acquired between 1902 and 1914 by four subsequent German expeditions to Turfan led by Albert Grünwedel (1856–1935) and Albert von Le Coq (1860–1930). The excavations yielded more than 30 thousand fragments in a large variety of languages and scripts, with the majority being in Chinese and Uighur. A large proportion of the texts is Buddhist, yet there are also many other types of material, such as Manichean and Christian writings, or copies of classical Chinese texts (Fuchs *et al.*, 2001). A catalogue of the Chinese Buddhist texts has been compiled by a team of Japanese scholars (Kudara *et al.*, 2005). Apart from the German collection of Turfan material, a significant amount of texts from Turfan was excavated by Chinese archaeologists in the 1960s and 1970s, and these are preserved in China. In addition, new texts are being continuously discovered in caves in the region of Turfan, thus the Turfan corpus continues to grow. Smaller groups of texts, partly in Chinese, partly in a variety of local scripts and languages, have also been discovered at other sites in Xinjiang, and these represent important sources for the study of the spread of Buddhism in China and Central Asia. Buddhist manuscripts have been discovered at sites near Khotan, Kucha, and Loulan, although these cannot compare to the vast quantities found at Dunhuang, Khara-Khoto, and Turfan. Nevertheless, the manuscripts provide evidence for the use of Chinese in these oases, along with other regional languages.

Most of the medieval texts available today survived in the dry desert climate of western China. Yet in a number of cases, the colophons of the manuscripts testify that the scrolls actually came from central China, especially from the Tang capitals of Chang'an and Luoyang. For example, the court-commissioned *sūtras* – mentioned above – were sponsored by the Tang court and produced in the capital before they were sent out to various parts of the empire. Naturally, the monasteries of the capital region and other cultural centers of China proper also had extensive libraries, but these did not survive, and the occasional discoveries cannot compete with the wealth of manuscripts and prints found in the West. Among the important finds are the Buddhist printed and handwritten texts from the Liao dynasty discovered in 1974 in a wooden pagoda in Yingxian county, Shanxi province (Shanxi, 1991). More recently, in 2004 over three hundred Buddhist manuscripts, paintings, and printed texts from the 9th–10th centuries were found inside a tower at Shende Temple (神德寺) in Shaanxi province during renovation work. A catalogue (Huang Zheng & Wang Xuemei, 2012) and good-quality photographs (Huang Zheng *et al.*, 2012) of the texts have already been published.

Apart from western China, the largest number of Buddhist manuscripts in Chinese is preserved in Japan. These were brought over to the islands by Japanese monks who crossed over to China starting from the late 7th century. In Japan – as was also the case in Korea and Vietnam – Buddhism predominantly relied on Chinese texts, and vernacular translations were made only in the modern period. From the 8th century, the state supported Buddhism and a *sūtra*-copying office was established, producing large quantities of copies. Nara, document in detail how *sūtras* were copied, including the measures taken to ensure the purity of the process (Lowe, 2012). The Shōgozō *sūtra* repository, originally part of the Sonshōin subtemple of the Tōdaiji (東大寺) Temple, houses nearly five thousand scrolls, including manuscripts copied in Japan and those imported from China and Korea. The Shōgozō collection is in the process of being published in digital form, with 101 discs already available (Kunaichō, 2000ff.).

In addition to the central repository of the Shōgozō, many Buddhist temples in Japan have significant collections of Buddhist texts, including Song editions of the canon, or manuscript copies made from both printed and handwritten texts. One of the important collections of Buddhist manuscripts is at the Nanatsudera (七寺) Temple in Nagoya, and these were recently identified as having been copied from Chinese manuscripts that came to Japan during the Nara period, thus predating the Song canon of 983 CE (Ochiai, 1991). Another recently "rediscovered" collection is that of the Amanosan Kongōji (天野山金剛寺) Temple, in which more than half of the manuscripts were copied from older manuscripts during the late Heian period (Ochiai Toshinori, 2007, 5). Yet another Japanese temple with a very large and well-known collection of early Buddhist manuscripts is the Ishiyamadera (石山寺) Temple in Ōtsu (Ishiyamadera, 1978). It is worth noting, however, that by now many manuscripts have left the temple collections and are kept in museums and libraries. For example, the library of Tenri University is well known for its collection of Nara-period manuscripts. Many of the Japanese collections have been published, and an increasing number of manuscripts are also becoming available digitally. Particularly worth mentioning is the Nihon Koshakyō database project, which provides high-quality images of Buddhist manuscripts from Japanese collections on its Web site. The best catalogue of Japanese manuscripts is by Tanaka Kaidō (1973), even though some of the information therein is by now out of date. For using manuscript archives and for an overview of the main collections, readers may consult B. Ruppert's (2006) introduction.

The transmission of Buddhist texts to Korea is evidenced in transmitted sources since the 6th century. The transmission of texts intensified in the following centuries, as monks from the Korean kingdoms went to China to study and either brought or sent texts back home (Kornicki, forthcoming). A firsthand witness to the use of Chinese Buddhist texts in the kingdom of Silla is a manuscript copy of the *Buddhāvataṃsakasūtra* copied in the mid-8th century, which was discovered in 1979 and is now classified as national treasure (McBride, 2008, 97). The popularity of the *Buddhāvataṃsakasūtra* in Silla is also evidenced in the about two hundred fragments of a copy carved in stone, believed to have been carved in the late 7th century (McBridge, 2008, 98). Some of the early manuscripts, as well as copies made from them, have survived in Japan (Kornicki, forthcoming). A Tang-dynasty fragment of the travel account of the Silla monk Hyecho (704?–787 CE), who embarked on a pilgrimage to India in 723 CE, was also discovered among the Dunhuang manuscripts (Pelliot, 1908, 511–512; Jan, 1965, 55–63; Yang *et al.*, 1984). During the Koryŏ dynasty, when Buddhism functioned as a state religion, efforts were made to obtain printed editions of the Chinese canon from the Song and Liao (Khitan) states, which in turn led to the publication of two Korean editions of the canon, one in the 11th and another in the 13th century (Kornicki, forthcoming; Lancaster, 1996; the texts of the two editions – the whole of the second and the surviving texts of the first – are available online [see bibliography]). The printing blocks of the second edition are still preserved in the Haeinsa Monastery.

In Vietnam, Buddhism is attested from at least the 2nd century CE, and manuscripts must have been regularly brought in the south, even if there is little evidence remaining. After Vietnam separated itself from the Chinese domain in the 10th century and became a tributary state, we begin to have references to diplomatic contacts with China, which also include official requests for the Chinese canon made on several occasions during the 11th century (Kornicki, forthcoming). These printed editions were then copied locally by hand, although there are sources suggesting – without hard evidence – that a local edition may have been printed in Vietnam at the end of the 13th century (Kornicki, forthcoming).

Epigraphy: South Asia

Inscriptions are an indispensable source for the study of Indian Buddhism. Buddhist inscriptions number in many thousands from all parts of South Asia, from the 3rd century BCE until the early centuries of the 2nd millennium CE. The main languages are Prakrit, Sanskrit, Gandhari, and Sinhala; Pali inscriptions are virtually nonexistent in South Asia, though common in Thailand. There are few, if any, Buddhist inscriptions in Tamil. The scripts are Brahmi and its many varieties and derivatives, and Kharoshthi in the northwest. Buddhist inscriptions typically record the establishment of stūpas, gifts to monasteries or the establishment of endowments for them, and dedications of relics and images. Cultic inscriptions consist of citations of ritual or canonical texts, while label inscriptions identify accompanying sculptures or paintings. Inscriptions elucidate innumerable aspects of the history, ritual and popular practice, and economic and institutional bases of Buddhism that are not revealed by the canonical literary tradition.

Editions, translations, and studies of Buddhist inscriptions are scattered in a variety of publications. The only wide-ranging collections of Buddhist inscriptions are M. Shizutani's (1979) *Indo Bukkyō Himei Mokuroku* (Catalogue of Indian Buddhist Inscriptions) and K. Tsukamoto's (1996–2003) *Indo Bukkyō Himei no Kenkyū* (Comprehensive Study of the Indian Buddhist Inscriptions). M. Shizutani's collection contains some 2,200 inscriptions arranged into broad historical periods with summaries and bibliographic references. The first volume (1996) of K. Tsukamoto's more comprehensive collection is arranged geographically into five regions, presenting complete or partial texts with annotation, bibliography, and Japanese translation. The second volume (1998) consists of word indices, maps, and illustrations. The third volume (2003) presents some 1,400 recently discovered inscriptions from the northern areas of Pakistan (see below).

There is no general anthology of Indian Buddhist inscriptions. D.C. Sircar's *Select Inscriptions Bearing on Indian History and Civilization* (1965b; 1983) includes many Buddhist inscriptions, but they are not grouped together as such. General works on Indian epigraphy such as those by H. Falk (1993), D.C. Sircar (1965a; 1966), and R. Salomon (1998) address various aspects of Buddhist inscriptions but do not treat them separately as such. K.H. Golzio's study (2010) provides convenient summary of Buddhist epigraphic material from South and Southeast Asia, but it is seriously flawed and in large part plagiarized (Kieffer-Pülz, 2013).

Many Buddhist inscriptions have been published in periodicals such as *Epigraphia Indica, Indian Antiquary*, and *Journal of the Epigraphic Society of India* and in various collections such as the Corpus Inscriptionum Indicarum. The present entry introduces only the most important publications, including collections of particular groups of Buddhist inscriptions (e.g. Konow, 1929; Lüders, 1961; Nakanishi & von Hinüber, 2014). Detailed references to particular inscriptions can be found in the catalogues of M. Shizutani and K. Tsukamoto and in standard epigraphic reference sources such as those by H. Lüders (1912b) and D.R. Bhandarkar (1927–1936; for further references, see Salomon, 1998, 252–261). Here specific references are given only for items of special importance or for new discoveries not included in the standard reference sources.

The study of Buddhist inscriptions has burgeoned in recent decades, in part because of the discovery of many new inscriptions from Gandhara and at sites such as Deur Kothar, Kanaganahalli, and Sannati. But equally important are innovative modes of analysis and application, with inscriptions being studied in terms of their broader archaeological, cultural, and historical significance, shedding a great deal of light on the actual practice of Buddhism. G. Schopen's groundbreaking studies of Buddhist belief and practice on the basis of inscriptions (compiled in Schopen, 1997; 2004; 2005; 2014) have been particularly influential. Other scholars have made recent contributions on such topics as the ritual function of inscribed objects (Boucher, 1991), the historical contextualization of inscriptions (Walters, 2008), and the lineages of the Buddha's disciples as revealed in inscriptions (Tournier, 2012; 2014).

Mauryan Period (3rd Cent. BCE)

The first Buddhist inscriptions are those of the Mauryan emperor Aśoka (c. 269–232 BCE), recorded in three Prakrit dialects. General guides and surveys of Aśoka's inscriptions are by F.R. Allchin and K.R. Norman (1985) and H. Falk (2006). (For an authoritative and comprehensive, though dated, edition, see Hultzsch, 1925; on the dialects, see Hinüber, 2001a, 46–51 and Oberlies, 2003.) While Aśoka's major rock and pillar edicts are nonsectarian, his minor rock edicts and separate pillar edicts are explicitly Buddhist. In the minor rock edicts (Andersen, 1990), found at 18 sites (incl. the recently discovered Ratanpurwa version; Falk, 2013), the emperor proclaims his affiliation with the Buddhist community and expresses his resolve to practice more zealously. Several minor pillar edicts address issues facing the Buddhist communities, particularly the ever-present threat of schism. Aśoka also erected two pillars recording his visits to Buddhist sacred sites at Nigali Sagar and Lumbini (Hultzsch, 1925, 164–169). Finally, in the Calcutta-Bairat inscription (Rajasthan; Schneider, 1982), he recommends seven canonical texts – this is an exceptionally important record, containing the earliest datable reference to specific canonical texts.

The reliquary vase from Piprawa (Uttar Pradesh; Fleet, 1906) seems to be approximately contemporaneous with Aśoka. It is thus the earliest record of the deposit of relics of the Buddha, a genre that became very popular in subsequent centuries.

In Sri Lanka during this period and continuing into the 1st century BCE, more than a thousand brief inscriptions in old Sinhalese Prakrit record the dedication of caves to the saṅgha. This is the beginning of a vast corpus of Buddhist inscriptions in Sri Lanka, independently documented in *Epigraphia Zeylanica* and *Inscriptions of Ceylon*.

Shunga Period (2nd–1st Cents. BCE)

Aśoka's choice of Prakrit rather than Sanskrit as his epigraphic language set the pattern for the next several centuries, during which various forms of midland Middle Indo-Aryan remained the epigraphic *lingua franca* for Buddhist inscriptions. But beginning around the 2nd century CE, in a development paralleling Buddhist Hybrid Sanskrit in literature, Buddhist inscriptions became increasingly Sanskritized, and by the 5th century CE standard Sanskrit had become the primary language.

In the Shunga period, Buddhist inscriptions in Prakrit became extremely common, with large numbers found at major stūpa and pilgrimage sites, most notably Sanchi, with over 900 inscriptions, and Bharhut, with 225. At Sanchi (Majumdar, 1940), the vast majority of inscriptions are short donative records on gates, pillars, crossbars, coping stones, and other elements of the circumambulatory structures around the stūpas. A typical example (no. 70; Majumdar, vol. I, 1940, 306) reads *nāvagāmikānā upāsikānā dānaṃ*, "gift of the female lay followers from Navagrama."

The stūpas at Sanchi and the nearby sites of Satdhara, Sonari, Bhojpur, and Andher have also yielded several reliquaries with inscriptions labeling them as containing the bodily remains of venerable monks. Most of these are otherwise unknown local figures, but two reliquaries from Sanchi and Satdhara bear the names of the Buddha's foremost disciples, Śāriputra and Mahāmaudgalyāyana.

The Bharhut stūpa (Lüders, 1963) has 141 donative inscriptions similar to those at Sanchi, plus 84 labels describing the scenes carved into the pillars and railings of the circumambulatory path, including references to 27 *jātakas* and *avadānas*, several of which are not attested in the canonical texts. For example, the *Rurujātaka* (no. 482 in the Pali *jātaka* collection) is depicted on a pillar medallion with the label *Migajātaka*, "The *jātaka* of the Deer" (Lüders, 1963, 126).

Similar short dedicatory inscriptions are found at several other sites in North and central India – for example Pauni, which yielded some 30 inscriptions of this and subsequent periods (Deo & Joshi, 1972). Smaller numbers of similar inscriptions are found at places such as Bodh Gaya and Sarnath, which were to become major epigraphic sites in later periods. Two inscriptions recently discovered at Deur Kothar connect the lineages of their monastic donors to the Buddha and to his disciple Anuruddha (von Hinüber & Skilling, 2013; Salomon & Marino, 2014), a sort of attestation never seen before in early Buddhist inscriptions.

In this period, Buddhist inscriptions began to appear in the Deccan. Ten inscriptions on reliquaries from Bhattiprolu (Lüders, 1912a) record, in an anomalous local variety of Brahmi and of the Prakrit epigraphical *lingua franca*, the names of the local devotees who sponsored the relics. Other sites in the central and eastern Deccan, such as Kesanapalli (Khan, 1969), Amaravati, and Sannati (Sarma & Rao, 1993), have yielded large numbers of short donative inscriptions from this and subsequent periods.

Satavahana and Ikshvaku Period (1st–3rd Cents. CE)

During this period, Buddhist inscriptions become very numerous, especially in four main centers: (1) the valley of the Kṛṣṇā River and neighboring regions of the Deccan, (2) Mathura and adjoining areas of central North India, (3) the Western Ghats, and (4) Gandhara and surrounding regions in the far northwest.

In the Deccan, many hundreds of Buddhist inscriptions dating from this period have been discovered at sites such as Alluru, Amaravati, Ghantasala, Guntupalli, Gurzala, Jaggayyapeta, Kanaganahalli-Sannati, Nagarjunakonda, Phanigiri, Rentala, and Salihundam. This material, including some inscriptions not previously published, is conveniently compiled by B.S.L. Hanumatha Rao *et al.* (1998). Many of these record donations sponsored by the Satavahana dynasty and its associates, and later by the Ikshvaku dynasty. Here we begin to see a shift away from patronage of stūpa sites by local monastic and nonelite lay followers making small individual contributions toward large-scale sponsorship by royalty and nobility.

The now ruined Amaravati stūpa is the source of over two hundred Buddhist inscriptions spanning some 15 centuries, including some particularly interesting specimens. The oldest Amaravati inscription is a fragmentary pillar with a text that resembles several Aśokan inscriptions but cannot be identified with any of them (Falk, 2006, 226). The majority of the Amaravati inscriptions date from the Shunga and especially the Satavahana periods (Burgess, 1887; *EpInd* 15, 258–275; Sivaramamurti, 1942, 271–304) and record donations of elements of the circumambulatory path such as railing pillars and crossbars. A unique fragmentary pillar from the earlier phase shows various episodes from the life of the Buddha with explanatory labels whose phrasing resembles that of the Pali *Mahāparinibbānasutta* (Ghosh & Sarkar, 1964–1965). After the Satavahana period, the Buddhist epigraphic record at Amaravati becomes sparse, but inscriptions with Buddhist content appear as late as the 13th century (*EpInd* 6, 146–160; 10, 43–44).

During the reign of the Ikshvaku kings, around the late 3rd century CE, the Kṛṣṇā Valley emerged as a particularly copious source of Buddhist inscriptions. Their capital, Nagarjunakonda, yielded several dozen long inscriptions (summarized in Srinivasan & Sankaranarayanan, 1979) recording gifts of *āyaka* pillars (sets of pillar on platforms attached to the drum of the stūpa), *caityas* (*cetiyaghara*), pavilions (*maṃṭava*), monasteries (vihāra), and sculptures by female members and associates of the Ikshvaku court, continuing the trend toward large-scale royal and elite patronage. One Nagarjunakonda inscription (*EpInd* 20, 22–23) presents a long list of countries said to have been converted by the Sri Lankan monks of the Theriya (i.e. Theravāda) school resident there, providing interesting information about the spread of Buddhism, or at least the self-presentation thereof.

Among recent discoveries in the Deccan, Phanigiri has yielded several new specimens, including an unusual inscription, mostly in Sanskrit verse, recording the dedication of a *dharmacakra* (Skilling & von Hinüber, 2011). The recently excavated site of Kanaganahalli has yielded a spectacular corpus of some three hundred inscriptions, including donative records and labels describing *jātaka* scenes and portraits of Aśoka and Satavahana kings (Poonacha, 2013; Nakanishi & von Hinüber, 2014).

The language of the Buddhist inscriptions of this region is usually Midland Prakrit, with some Dravidian influence. But there are also a few Sanskrit inscriptions, for example from Nagarjunakonda (*EpInd* 35, 11–13, 17–18) and Phanigiri, anticipating the gradual shift from Prakrit to Sanskrit that took place in subsequent centuries.

Mathura became a major center of Buddhist activity in the first few centuries of the Common Era, especially during the Kushana Empire, yielding some 150 inscriptions in all, mostly from this period. Most of these are collected in H. Lüders' (1961) posthumous edition, but several more inscriptions have been discovered subsequently (Salomon, 1998, 144). In Mathura, unlike the far northwest and the south, donative inscriptions on the pedestals of statues of buddhas, bodhisattvas, and other Buddhist figures predominate, although inscriptions on pillars, slabs, railings, and utensils are not rare. Again in contrast to contemporary Buddhist inscriptions that were composed in Prakrit, most of the Mathura inscriptions are in Epigraphical Hybrid Sanskrit (Damsteegt, 1978), or occasionally in pure Sanskrit (Salomon, 1998, 81–86). The Mathura inscriptions attest to the presence in the city and its environs of at least four different schools: Dharmaguptaka, Mahāsāṅghika, Sāṃmitīya, and Sarvāstivādin. Such information allows us to localize traditions which are otherwise known only from textual sources lacking geographical and historical contexts. Similar image-dedication inscriptions are found at other sites in the Kushana sphere of influence in North India, notably Sarnath, Kosam (Kauśāmbī), and Saheth-Maheth (Śrāvastī).

The frequency of Iranian and other non-Indian names in Mathura inscriptions betrays a strong presence of a non-Indian elite from the northwest who sponsored Buddhist institutions under the Kshatrapas (Satraps) of Mathura and their successors, the Kushanas. Unlike nearly all other Mathura inscriptions, which are written in Brahmi script, the uniquely important Mathura lion capital inscription (recently reedited in Falk, 2011; Baums, 2012, 219–222) is in Kharoshthi script and Gandhari language. Especially significant for the history of Buddhism is the Mathura pedestal inscription recording the dedication of a statue of the buddha Amitābha (Schopen, 1987), the earliest definite reference in inscriptions to a Mahāyāna figure.

The rock-cut shrines at sites such as Nasik, Karle, Junnar, Kanheri, Bhaja, Bedsa, and Kuda in the Western Ghats have yielded large numbers of donative inscriptions from the first two centuries of the Common Era. This material is collected by J. Burgess and B. Indraji (1881); for improved editions, see the works by É. Senart (1902–1903 [Karle]; 1905–1906 [Nasik]) and S.R. Gokhale (1991 [Kanheri]). These inscriptions record gifts of caves, cells, columns, stūpas, wells, doors, images, and other structural and decorative elements of the cave complexes. Many inscriptions, especially at Junnar and Nasik, also document endowments of villages or farm lands for the maintenance of the monastic communities. While most inscriptions are brief notices in Prakrit, the lavish gifts of Uṣavadāta, son-in-law of the Western Kshatrapa ruler Nahapāna, are celebrated in elaborate records at Nasik and Karle in Hybrid Sanskrit, or in one case in Sanskrit. The Satavahana kings who seized this region from the Kshatrapas later renewed these grants with equally ornate inscriptions in Prakrit. These styles anticipate the subsequent development of long Buddhist inscriptions in formal literary Sanskrit.

In this period Buddhist inscriptions are especially numerous in the Gandhara region and adjoining areas, eastern Afghanistan, and southern Uzbekistan. Unlike other early Buddhist inscriptions written in Brahmi, nearly all of the Gandharan inscriptions are in Kharoshthi script and in the northwestern Prakrit vernacular, Gandhari. At the time of S. Konow's collection of Kharoshthi inscriptions in 1929, only one hundred were available, but now some six or seven hundred such inscriptions with Buddhist content are known (see the Web site Catalog of Gāndhārī Texts). Typical genres are foundations of relics and stūpas; dedications of wells and images; donations of pots, bowls, lamps, and other utensils; and pilgrims' records. Relic and stūpa inscriptions are particularly important, with some 60 examples, engraved on the reliquaries themselves, on sheets of metal placed in the reliquary, and on the stone slabs covering the reliquary chamber (Baums, 2012; Salomon, 2012). Though usually short, some, notably the gold-leaf inscription of King Senavarma of Oḍi (Catalog of Gāndhārī Texts no. 249; von Hinüber, 2003), include elaborate formulas incorporating quotations from canonical texts.

Gandharan inscriptions, especially relic dedications, are often dated, making them a valuable historical source. They also often contain references to the schools to which the donations were made, showing, for example, the dominance of the Dharmaguptakas in eastern Afghanistan in contrast to the prevalence of the Mahāsāṅghika school in southern Uzbekistan, as attested in a corpus of several hundred potsherd inscriptions from Termez (Fussman, 2011).

Buddhist pilgrims' and travelers' records numbering in the thousands have been discovered in recent decades along the river valleys of the upper Indus and Hunza Rivers at sites such as Shatial, Chilas, Thalpan, and Hunza. These inscriptions, often accompanied by drawings of buddhas, stūpas, and other Buddhist symbols, are thoroughly documented in the volumes of *Materialen zur Archäologie der Nordgebiete Pakistans*, mainly by G. Fussman and O. von Hinüber, and are summarized (based on publications up to 2003) in volume III of K. Tsukamoto (1996–2003). This material constitutes a unique body of information (Neelis, 2011) on the spread of Buddhism beyond India into Central and East Asia.

In Sri Lanka during this period, hundreds of rock inscriptions in old Sinhalese record donations of water tanks, agricultural lands, and other gifts to the Buddhist saṅgha. These are anthologized in volume II of *Inscriptions of Ceylon*.

Gupta Period (4th–6th Cents. CE)

During the reign of the Gupta Empire and its contemporaries, the character of Buddhist epigraphy changed drastically. Buddhist inscriptions adopted the formats of Brahmanical records, the predominant types being copperplate grants and stone *praśastis* (eulogies) in Classical Sanskrit. Buddhist inscriptions

were proportionally less frequent in comparison to non-Buddhist ones, and less concentrated in particular sites or zones, except for major Buddhist pilgrimage centers such as Nalanda, Sarnath, and Bodh Gaya. Mahāyāna beliefs and practices are explicitly espoused in many inscriptions of this period.

Buddhist copperplate charters typically record donations to Buddhist institutions granted or approved by kings. The kings were not always themselves Buddhists but acted to administer requests by officials, associates, or influential individuals who were. The "gift" typically took the form of a village or tract of land whose tax revenues were granted to the donees in perpetuity. In their format and contents, such inscriptions are virtually identical to non-Buddhist inscriptions of the corresponding type, except that the recipients are Buddhists rather than Brahmans. Buddhist copperplate inscriptions first appear in the late 3rd century CE (Falk, 1999–2000) and become fairly common from around the 5th century CE onward, mainly in northern and eastern India, although they remain everywhere much fewer than the corresponding non-Buddhist inscriptions. A significant early example is the Gunaighar (Bangladesh) plate (*IHQ* 6, 45–60) of 507 CE, recording the gift of 11 plots for the maintenance of Mahāyāna monks of the Avalokiteśvarāśrama vihāra. An early example from south India is the Hiregutti plates (*EpInd* 27, 70–75), recording King Aśaṅkita's donation of a village to the saṅgha. From western India, some 25 examples belong to the Maitraka dynasty of Valabhī (listed in von Hinüber, 2013).

An early specimen of a *praśasti*-type inscription is the Kura (Pakistan) stone inscription commemorating the dedication of a Buddhist monastery under the auspices of the Hun king Toramāṇa. At the end of this inscription, the designation of the donees' school affiliation appears to have been altered (Schopen, 2000, 15), hinting at the sectarian rivalries that must have plagued such institutions. A notable example from the late 6th century CE is the Bodh Gaya inscription recording the foundation of a temple by Mahānāman, a native of Sri Lanka, prefiguring the increase in later centuries of inscriptions recording donations at this site by Buddhist pilgrims from outside of India (Tournier, 2014).

Other specimens of stone *praśastis* come from the Ajanta caves, notably the inscription of the Vakataka minister Varāhadeva (late 5th cent. CE), recording the dedication of cave 16 and containing a vivid poetic description of it (v. 24; CII 5, 103–111). Ajanta at this period also yielded specimens of literary inscriptions containing quotations from Buddhist poetic works such as the *Jātakamālā* and *Saundarananda*, accompanying paintings of the corresponding passages (Lüders, 1902; Schlingloff, 1975). A complete catalogue of Ajanta inscriptions, numbering nearly one hundred, including unpublished graffiti, is presented in Cohen, 2006.

Other types of inscriptions with textual citations are found in great numbers during this period, especially ones containing short passages summarizing the essence of the dharma, which were considered equivalent to bodily relics (Boucher, 1991). Earlier types, going back to the 2nd century CE, consisted of a *pratītyasamutpāda* (dependent co-origination) formula, but in this period, the so-called Buddhist creed verse proliferated (*ye dharmā hetuprabhavā hetuṃ teṣāṃ tathāgato hy avadat/teṣāṃ ca yo nirodha evaṃvādī mahāśramaṇaḥ*; "the Tathāgata expounded the cause of those dharmas which arise from a cause, and the cessation of them; so spoke the great renouncer"; Skilling, 2008a).

From this period onward, such texts are found in huge numbers, on bricks, slabs, metal plates, images, pedestals, and especially clay tokens. They are found all over the Buddhist world, mostly in Sanskrit but sometimes in Pali (von Hinüber, 1985), particularly in Southeast Asia (Skilling, 2002; 2008b). A complex citation inscription in Pali is the set of 20 gold plates from Hmawza (ancient Śrīkṣetra), Burma, containing the *pratītyasamutpāda*, the *bodhipākṣikadharmas* (factors conducive to enlightenment), and six other formulas (Falk, 1997). Similar inscriptions have been found in Turkmenistan (Baums, 2009) and Afghanistan (Melzer, 2006). The latter example includes extracts from Mahāyāna texts, and other Mahāyāna citation texts are found in Sri Lanka (Paranavitana, 1928–1933; 1934–1941; von Hinüber, 1984).

Royal, personal, and institutional seals and sealings from this period are found in large numbers at sites such as Nalanda, Sarnath, Kosam, and Kasia. This material is summarized by K.K. Thaplyal (1972, 206–222). Such inscriptions are often useful in determining the location of ancient Buddhist sites and in interpreting their monastic structures.

It is also during this period that Buddhist inscriptions began to appear in Nepal. Several noteworthy examples are ably presented and analyzed by D. Acharya (2008). Like most Buddhist inscriptions from Nepal of this and subsequent periods, these are dedicatory or cultic records on images; more ornate types of Buddhist inscriptions are very rare in Nepal.

Late Inscriptions (7th–13th Cents. CE)

During this period, Buddhist inscriptions became more and more similar in style and format to non-Buddhist inscriptions. The predominant types are elaborate *praśasti* stone inscriptions recording donations and foundations, long copperplate grants, image dedications, and sealings. Major donative records typically record large-scale foundations of monastic institutions, whereas smaller donations are mostly in the form of images; relic dedications are no longer found. Buddhist inscriptions decreased in number during this period and are found in large numbers only in northeastern India, particularly under the patronage of the Pala and other regional dynasties. In other parts of South Asia, Buddhist records are mostly scattered and dispersed and concentrated only at sacred sites such as Sarnath, Bodh Gaya, Amaravati, Saheth-Maheth (Śrāvastī), and Nalanda. Several of these inscriptions record the patronage of royalty from outside South Asia. Many inscriptions of this period attest to the predominance of the Mahāyāna – for example the 12th-century Nalanda inscription of Vipulaśrīmitra (*EpInd* 21, 97–101), referring to Prajñāpāramitā and temples of Khasarpaṇa and Tārā.

Nalanda has yielded particularly interesting specimens of late Buddhist inscriptions (Sastri, 1942). For instance, the 9th-century copper plate of the Pala king Devapāladeva (*EpInd* 17, 310–327; Majumdar, 1926) records the dedication of four villages to a monastery built at Nalanda by the king of the Sailendra dynasty of Java and Sumatra. The 11th-century "Larger Leiden plates" (*EpInd* 22, 213–266) correspondingly commemorate the Chola king Rājarāja I's donation of a village to a monastery built by a Sailendra prince. A stone inscription from Ghosravan, near Nalanda (*IA* 17, 307–312), recounts the career of a monk from Nagarahāra (modern Jalalabad, Afghanistan) who became the supervisor of a monastery at Nalanda, showing that Buddhist communities in South Asia were still in communication over vast distances.

Donative inscriptions on statues are especially numerous during the Pala period in northeastern India (8th–12th cents.). These are conveniently collected by S.L. Huntington, (1984, 203–250; see also Bhattacharya, 1998). A cache of 93 inscribed bronze figures was discovered at Kurkihar near Gaya (Banerji-Sastri, 1940a; 1940b; Gupta, 1965, 125–159), many of them dedicated by devotees from distant Kanchipuram. Another interesting series of inscribed bronze images comes from the period of the Palola dynasty of Gilgit in the far northwest (see e.g. von Hinüber, 2004; 2011).

In this period, stone tablets and terracotta impressions of *dhāraṇīs* are found in many parts of the Indian Buddhist world, even in its farthest reaches, from Afghanistan to the Maldives (see e.g. Schopen, 1982; Gippert, 2004). Ratnagiri (Odisha) has yielded several specimens of *dhāraṇī* inscriptions from the 9th to the 11th century (Mitra, 1981, 98–100, 229–232) as well as many monastic and personal sealings, terracotta tablets, and stone slabs with the "Buddhist creed" (Mitra, 1983, 380–422).

By the 12th century, Buddhist inscriptions had become increasingly rare, though a few noteworthy specimens survive, mostly at pilgrimage sites. The construction of a vihāra by Kumāradevī, a queen of the Gahadavala king Govindacandra, is recorded in a stone inscription in ornate verse from Sarnath (*EpInd* 9, 319–328). A copper plate from Saheth-Maheth (*EpInd* 11, 20–26) commemorates Govindracandra's dedication of six villages to the Jetavana Monastery at the request of two monks from Utkala (modern Odisha) and Coḍa (variant Coḷa; Tam. Cōḻa, the Chola Kingdom). A later stone inscription from Saheth-Maheth (*IA* 17, 61–64) records the foundation of a Buddhist monastery in 1219–1220 CE. Among the latest Buddhist inscriptions is the Amaravati inscription of 1234 CE (*EpInd* 6, 157–159) recording grants by members of the local royalty to a Buddhist institution, but J.S. Walters (2008) proposes that this does not provide evidence of an ongoing local Buddhist tradition, but rather shows the influence of a strategic alliance with contemporary Sri Lankan rulers.

In Sri Lanka, Buddhist inscriptions in Sinhalese on pillars and stone slabs are very abundant, particularly between the 9th and the 12th century (*ICe* 5). These typically record gifts to the saṅgha by royalty and laypeople or proclamations concerning its regulations and affairs called *katikāvata* (Ratnapala, 1971; Gunawardana, 1979). There are also a few inscriptions in Sanskrit, some illustrating the presence of Mahāyāna Buddhism, but, surprisingly, very few Pali inscriptions (Dias, 1971).

RICHARD SALOMON

Epigraphy: Southeast Asia

Most Buddhist inscriptions in Southeast Asia may be assigned to one of three general analytical categories. They may be classified as citation inscriptions, caption inscriptions, or donative inscriptions; however, there are also less common types of epigraphy (see p. 994 on *siddhayātra* inscriptions) that elude this tripartite schematization.

Epigraphs of the first type are so-called because they inscribe text for which parallels can often be traced in Buddhist scripture. The paradigmatic example is the inscription of the *ye dhammā* (Pal.) / *ye dharmāḥ* (Skt.) stanza, an encapsulation of the teaching of "conditioned arising" (Pal. *paṭiccasamuppāda*; Skt. *pratītyasamutpāda*), which is found in different recensions in a wide range of Pali, other Middle Indo-Aryan, and Sanskrit literary sources (Skilling, 1999; 2003–2004). While we follow scholarly convention in referring to such epigraphs as citation inscriptions, in most cases it is not possible to determine with certainty whether such inscriptions were in fact cited from a particular source text, recalled from memory, or if they were transmitted independently of any perceived scriptural basis. And indeed there is at least one major corpus of citation inscriptions from early Southeast Asia (see p. 994 on the *ajñānāc cīyate* verse) for which there is no textual parallel in the Buddhist literature that has come down to us (Skilling, 2015). Citation inscriptions were and still are produced by Buddhists across the region as embodiments of the dhamma and objects of veneration and ritual. We include in this category also inscribed mantras and so-called *bīja* (seed) syllables.

Caption inscriptions comprise epigraphic glosses that accompany iconographic representations of narratives drawn from Buddhist texts, such as a life of a buddha or a *jātaka* (tale of a former life of a buddha).

Donative inscriptions were and still are produced, and often publicly established and displayed, to document a work of merit consisting of a gift (*dāna*) made to support and perpetuate the institutions and teachings of Buddhism. Such gifts include building, repairing, and adorning monasteries and shrines; offering lands, livestock, and labor for the upkeep of a monastic community; creating images or ritual utensils; copying texts of the dhamma or representing them in art; and sponsoring ordinations. A donative inscription might amount to nothing more than the name of a donor etched on the base of a Buddha image, or run to hundreds of lines inscribed across the front and back of multiple massive stone slabs.

The motivations for such meritorious acts of giving are many, and often find explicit mention in lengthier donative inscriptions. Among other things, stated motivations include wishes for buddhahood, the opportunity to take a bodhisatta vow, *nibbāna* at the time of the next Buddha Metteyya, prosperity and happiness in this life or the next, the protection and prolongation of the teachings of the Buddha, and the sharing of merit with living or deceased persons or deities. Several formulaic components are characteristic of lengthier donative inscriptions:

1. the date of the work of merit;
2. the name(s) of the donor(s);
3. the name(s) of the recipient(s) of the gift;
4. a list of the property transferred;
5. the motivation for the gift; and
6. an admonition warning others against nullifying or injuring the gift.

As some examples discussed below show, occasionally donative inscriptions incorporate citations, eulogies to the donor (*praśasti*), and words of praise for the Buddha, dhamma, or saṅgha.

During the premodern period, the purpose of donative inscriptions was not primarily commemorative. They were legal documents that testified to the legitimate ownership of property. Inscriptions were cited in tax surveys to establish the owners and boundaries of land, and invoked in court cases as evidence of the property belonging to a particular monastic community. Some inscriptions record protracted legal battles over property, with laypersons accusing monks of falsely claiming ownership over lands that had never been donated to them (Than Tun, 1998), or factions within a family disputing who had the right to give property to a monastic community and thereby accrue merit (Frasch, 1996). Because of the continued legal importance of inscriptions, authorities occasionally reinscribed damaged ones onto new ston

damaged ones onto new stone or copperplate or copied them onto palm-leaf or paper manuscripts. An example of the former is a countrywide cadastral audit initiated by the Burmese king Badon in the late 18th century that involved recopying stones and archiving of hundreds of original and recopied inscriptions in and around the capital city (Taw Sein Ko, 1897; 1913; for updated readings of selected inscriptions, see *Manta leḥ mahāmuni taṃ tuiṅḥ atvaṅḥ rhi kyok cā myāḥ*). For copying onto copperplates, see, for instance, the case of the Old Javanese Wanua Tengah III inscription (mentioned on p. 995), which incorporates a copy of a prior Sanskrit edict, and the Old Javanese Kāñcana and Śobhāmṛta inscriptions, which pretend to be integral recopies of documents centuries older (Sarkar, 1971–72, no. 22; Titi Surti Nastiti, 2007).

While in some parts of Southeast Asia, Buddhism has enjoyed nearly exclusive patronage from the state throughout history, and in some others its success as an institutionalized religion has waxed and waned in competition notably with (Śaiva) Hinduism, there are also certain regions – although not many – where it has never played more than a marginal role. Defining what constitutes a Buddhist inscription is dependent, among other factors, on the overall social status of Buddhism in a given area. Throughout history, any inscription from Burma, for instance, can be considered Buddhist by default; the island of Sumatra, before Islamization, has hardly yielded any explicitly non-Buddhist epigraphs, and so in case of doubt, any inscription will have to be considered Buddhist. In other areas, we must depend on textual content or archaeological context to determine whether an inscription may be called Buddhist. In this connection, it is useful to keep in mind that ostensibly conclusive keywords such as *bhikṣusaṃgha* and vihāra may in certain cases denote Śaiva ascetics and monasteries, and that inscriptions may not be designated as Buddhist on the sole grounds of occurrence of such terms (on *bhikṣusaṃgha* in a Śaiva Sanskrit inscription of 8th-century Java, see Griffiths, forthcoming a; on the occurrence of vihāra in Śaiva epigraphical context in Campā, see Griffiths *et al.*, 2012, 236).

Geographical and Chronological Overview

Buddhist epigraphy covers almost the whole of the area that is known, in current geopolitical and academic parlance, as Southeast Asia. Not a single member state of the Association of Southeast Asian Nations (with the possible exception of Singapore) is not home to a number of Buddhist inscriptions. Present borders are only partly a useful guide in the classification of Buddhist inscriptions: some regions now considered part of Southeast Asia might for the purposes of treating Buddhist epigraphy equally well be classified as belonging to South or East Asia; all of maritime Southeast Asia – the current states of Indonesia, Malaysia, Singapore, Brunei, and the Philippines – can usefully be considered a cultural-historical unit (which we will call Nusantara), as can Laos together with Thailand; current Vietnam must be viewed as comprising at least two historical entities, Campā and Đại Việt (the latter not taken into account in this entry); the epigraphical heritage of the Khmers stretches far beyond today's borders of Cambodia.

The oldest Buddhist inscription from Southeast Asia, if not the oldest inscription from Southeast Asia *tout court*, is found on a small number of clay objects stamped with the Pali or Prakrit inscription *saṃghasiri*, found during the excavation of a mound at the Beikthano archaeological site in lower-central Burma, provisionally dated to the 2nd century CE (Aung Thaw, 1968). These may, however, have been imported from the Indian subcontinent.

The chronology of the earliest positively local Buddhist inscriptions is problematic throughout the region, but certainly by the 6th century CE, a culture of production of Buddhist inscriptions was well established in several areas. This culture died out centuries ago in all of Nusantara, but lives on into the present in large parts of the Southeast Asian mainland.

Scripts and Languages

With the exception of those parts of Vietnam where the use of Chinese characters was the norm, all other Buddhist cultures of Southeast Asia (including Campā in what is now Vietnam) have exclusively used script types that are directly or indirectly adopted from South Asia. The classification of and nomenclature for premodern Indic scripts in Southeast Asia is a notorious problem (comp. Sander, 2007), and hardly any sophisticated research crossing the boundaries of present nation states has been undertaken in this field. Many publications on early Southeast Asian inscriptions use the term "Pallava" script. This name refers to the Pallava dynasty, which came to power on the southeast coast of India around 300 CE. Early 20th-century scholars attributed to this dynasty the dissemination of cultural features – such as the use of Sanskrit and production of Hindu and Buddhist statuary – from India to Southeast Asia. But there is virtually no direct evidence of any Pallava involvement, certainly not for the earliest centuries, and the Pallavas were by no means the only southern Indian kings to use this script during the early 1st millennium. Moreover, the inscriptions of other dynasties show a form of writing that looks just as much like the script used in Southeast Asia as does the script seen in Pallava inscriptions. Several inscriptions from Burma, Thailand, and Malaysia employ this script in Buddhist contexts, in Pali citation inscriptions, whereas the Pallava dynasty was never an important patron of Buddhism. For these reasons, among others, it is preferable to use more neutral terms – for instance, Late Southern Brahmi – to describe the form of writing found in most Buddhist inscriptions of Southeast Asia before about 700 CE. After this period, Late Southern Brahmi developed in separate directions in various regions of Southeast Asia, creating, for example, the "Kawi" script of Java (de Casparis, 1975), seen in caption inscriptions on Borobudur probably dating to the 8th century, which is the antecedent of modern Javanese and Balinese scripts. In the same way, the modern scripts of mainland Southeast Asia (notably Mon-Burmese, Khmer and Thai; see e.g. Antelme, 2007) also descend ultimately from Late Southern Brahmi.

Indic writing was received in Southeast Asia in more than one wave, and certain areas during certain periods were strongly influenced by northeastern Indian Buddhist culture. In those areas, we find scripts derived from Northern Brahmi, namely, Late Northern Brahmi (roughly 6th–7th cents.; found in Arakan and at Śrīkṣetra, both Burma) and the Siddhamatrika script (in the 8th and 9th cents.; particularly on Java and Bali; see Griffiths *et al.*, 2013; Griffiths, 2014a), from the dominion of the Palas, who ruled a large area of northeastern India from about the mid-8th century onward. Later we find instances of Nagari script proper, in Burma (see p. 992) as well as Nusantara (de Casparis, 1982; Griffiths, 2014b).

One particular script seems to show features of both northern and southern Indic writing: this so-called Pyu script, known only from a small number of inscriptions found at Pyu sites within the Irrawaddy River valley of central Burma, still requires detailed study in order for it to be classified. The same script is involved in the rare phenomenon of digraphy – that is, the use of more than one script in a single inscription. One can find combinations of Pyu script, used to write the Pyu language – which is not yet well understood, but is apparently a member of the Tibeto-Burman language family – with Late Southern Brahmi to write Pali or Late Northern Brahmi to write Sanskrit. This last example simultaneously illustrates the fact that, in general, the northern scripts, when used in Southeast Asia, show a strong association with Buddhism and Sanskrit (de Casparis, 1982), whereas Late Southern Brahmi and its descendant scripts are not so specialized in terms of religious affiliation and are used to write a far more diverse range of languages. Two generalizations are possible with regard to the Pali language: it is in Southeast Asia never written in a northern Indic script, and it always indicates a Buddhist context.

There are very rare examples of the use of the later South Indian scripts Tamil and Grantha, and a single epigraph written in the northern Bhaikshuki script (Dimitrov, 2010).

Materials and Object Types

The favored material for large inscriptions has, throughout history, been stone. Stone inscriptions are in the vast majority of cases documents intended to be public and, hence, to be read. In mainland Southeast Asia, sandstone of excellent quality for manufacture of inscriptions is widely available. In Nusantara, the quality of available stone (in most cases andesite) tends to be lower, and consequently ancient stone inscriptions from the archipelago are often considerably more challenging to decipher than are contemporary inscriptions from the mainland. The favored format for stone inscriptions is the stela, that is, a slab of stone intended to stand upright on a tenon, without necessary structural integration into a larger architectural context (such as a temple), generally inscribed at least on its two large faces, often also bearing text on smaller faces at the top and sides. Architectural elements in stone, such as doorjambs and lintels, are also often inscribed, as are stone cult images, relief slabs applied to walls of monuments, and so on.

Inscriptions were and still are also commonly engraved on metal supports, predominantly in copper/bronze, silver, and gold. Inscriptions engraved on metal supports may be for public readership, but certain types of metal inscriptions were clearly not meant to be read, serving only ritual purposes.

The medium of the copperplate, well known in Indian epigraphy for recording land transactions, was widely used in Southeast Asia only in Nusantara (on Bali, Java and Luzon) – singular exceptions known from Arakan (Sircar, 1967), from the Haṃsavatī kingdom in lower Burma (Pan Hla & Guillon, 1972) and from U Thong in Thailand (Cœdès, 1958; this inscription is not Buddhist) confirm the rule. Throughout Southeast Asia, foils or leaves made of precious metals were inscribed with Buddhist texts and worn as amulets or installed in monuments or images at the time of their consecration. Ritual utensils also bear inscriptions; bronze bells stand out in Burma for being very often endowed with donative inscriptions but are scarcely found, or even absent, as an epigraphic medium in other parts of Southeast Asia. Elsewhere, inscribed ritual utensils are somewhat rare, but a substantial number of explicitly Buddhist examples are known from ancient Cambodia (Estève & Vincent, 2010; Griffiths & Vincent, 2014). Although inscribed (signet) rings are not uncommon, only very few of the preserved examples can be connected with Buddhism (Malleret, vol. III, 1959–1960, 111; no. 916 *saṅghapauttasya*). A very widely attested type of metal support for inscriptions is, finally, the sculptured cult image itself.

The third important material used as epigraphic support is clay, whether left unbaked or baked to become terracotta. Most instances of the use of this material do not serve purposes of public expression. Clay/terracotta is the favored material in Buddhist contexts for the mass reproduction of Buddhist texts and images as part of ritual practices. The technique of applying text is that of stamping onto an object, engraving into a mold, or inscribing the clay directly. Such inscriptions are found in great numbers, throughout Southeast Asia, on so-called votive tablets or sealings (see pp. 992–996, 1002–1003) bearing molded images. The practice of stamping texts onto small semispherical lumps of clay and inserting those into small clay stūpas seems to have been limited to Nusantara, where we also find clay stūpas directly stamped with the same texts (Issatriadi, 1976–1977). The engraving of caption inscriptions into clay plaques with narrative reliefs – an instance of the public use of this kind of material support – is apparently limited to Burma (see p. 1002).

The last-mentioned type of inscription may be compared with the application of ink narrative captions, donative statements, horoscopes, and perhaps in some cases graffiti onto plaster layers. This practice is extensively attested at Pagan and in later Burmese temples and also – though very poorly preserved – in several Buddhist sanctuaries of Central Java (de Casparis, 1958, 7, 13). A special type of yellow-beige pyrophyllite, known as *andagū* in Burmese, was used for the carving of rather small images, rarely exceeding 30 cm, many of which bear inscriptions (Bautze-Picron, 2006). Other materials used as epigraphic support are ivory and wood, but we know no examples older than a few centuries.

Inscriptions in Sanskrit

Inscriptions in Sanskrit no doubt form the most diverse linguistic subgroup within the corpus of Southeast Asian Buddhist epigraphy. They are represented in all present-day countries (except Singapore), found in bilingual combination with most languages of vernacular epigraphy, and illustrate a greater typological diversity of Buddhist inscriptions than one might find in any other individual language of Southeast Asia, past or present.

The spread of Sanskrit in Southeast Asia is concomitant to the general spread of Indic cultural features in the region. All early inscriptions of Southeast Asia are undated, and determining the earliest Buddhist examples depends on – notoriously treacherous and imprecise – paleographic arguments. Although current scholarship assigns somewhat earlier dates to the oldest Pali inscriptions of Burma (see p. 996) than it does to the earliest Buddhist inscriptions in Sanskrit, we would not wish to exclude the possibility that one or more of the Sanskrit inscriptions discussed below are in fact earlier than, or contemporary to, them. Sanskrit was only very rarely inscribed in central Burma but elsewhere has known phases of significant or even exclusive use in epigraphic practice. The general trend has been for its use to give way to that of vernacular languages, although it never went out of fashion in Cambodia throughout the so-called pre-Angkorian and Angkorian periods (6th–13th cents.); in Nusantara, where Sanskrit has never known a long phase of predominant usage, continuous exchange with South Asia seems to be one reason behind the resurfacing of Sanskrit as an epigraphic language at various brief periods in different regions.

Arakan

Among the earliest Sanskrit inscriptions of Buddhist Southeast Asia are no doubt some that were found in Arakan. The Arakan tradition of Sanskrit epigraphy is limited chronologically to roughly the second half of the 1st millennium CE and forms only the first chapter of the epigraphic history of Arakan. After a gap of several centuries without any local epigraphic production, an Arakanese vernacular tradition starts in about the 14th century and forms the second chapter of this history (see pp. 1002–1003). The majority of the relevant items have been found around the major early urban site of Vesālī. The total number of Sanskrit inscriptions so far recorded is about two dozen (Johnston, 1944; Gutman, 1976; Griffiths, forthcoming d). The corpus includes several *ye dharmāḥ* stanza citations (Kyaw Minn Htin, 2011), besides some short and some (very) extensive donative inscriptions, including the aforementioned copperplate charter.

Central Burma

On the whole, the Sanskrit epigraphical record of Burma is not well served by publications and some pioneer work remains to be done. We are aware of only four inscriptions wholly or substantially composed in Sanskrit found in what is today central Burma:

1. the bilingual and digraphic Sanskrit-Pyu inscription – whose partly damaged text does not evidently permit classification among any of our categories – engraved on the base of a stone Buddha image at the Śrīkṣetra Museum (Pyay, Burma), comprising eight stanzas in *vaṃśasthavila* meter interspersed with Pyu glosses (Luce, vol. I, 1985, 65, 65n22, 132; vol. II, 1985, pl. 16–17; Griffiths *et al.*, forthcoming);
2. the fragments of a monolingual Sanskrit inscription, engraved in a form of Late Northern Brahmi, said to have been found at Śrīkṣetra but of which no trace is to be found there nowadays (see Sircar, 1976, 210–217; another fragment whose discovery was reported in the *ASB*, 1960, 22 [fig. 13] may well belong to this same inscription);
3. a ruined inscription held in a small shed near the Tharaba gate at Pagan, in a form of early Nagari or proto-Bengali script, almost entirely illegible; and
4. the recently discovered Sawlu inscription from Myittha, which at the top of the side also bearing Pali and Pyu texts, reveals the extremely damaged remains of a Sanskrit portion too, again in such a north(east) Indian script.

Some small artifacts, such as rings and intaglios, bear short legends in the form of Sanskrit words or names; notable are several instances of intaglios bearing the Sanskrit (or Pali) compound *dayādānaṃ* (gift out of compassion; Aung Thaw, 1972, 14).

From the early 2nd millennium CE, there is also the evidence of the numerous sealings dated to the reigns of Aniruddha (r. c. 1044–1077) and his immediate successors, some of which carry short Sanskrit or Palicized Sanskrit donative statements or citations, frequently of the *ye dharmāḥ* stanza, stamped in Nagari script into the clay. In addition, there are a few instances in which donative inscriptions contain short Sanskrit passages in the Mon-Burmese script, usually recording astronomical data, such as in the final several lines of the monumental Shwegugyi Inscription (1131 CE; Pe Maung Tin & Luce, 1960). During this period Sanskrit is also, though rarely, found written in Burmese script in brief invocatory phrases that begin inscriptions (otherwise written in Pali). The most common of such usages is the Sanskrit word *śrī*, found nine times among the earliest Burmese vernacular inscriptions dated to the 12th century, and several variations on *namo sarvajñāya* (e.g. *namo sarbbajaññāya*; "hail to the omniscient [Buddha]!").

The Khmer Cultural Sphere

The epigraphical record of ancient Cambodia, covering all of present Cambodia and large portions of what are now Thailand, Laos, and Vietnam, is comparatively well served by the monumental series of *Inscriptions du Cambodge* by G. Cœdès (1937–1966); in volume VIII, he published an inventory of about 1000 inscriptions that assigns a K. (for Khmer) number to and lists the bibliography for each item. Since then, the inventory has been carried forward (Jacques, 1971; see also Gerschheimer, 2003–2004) and further volumes of inscriptions have been published (Pou, 1989; 2001; 2011).

A tradition of use of Sanskrit for Buddhist inscriptions in the Khmer cultural sphere is attested from the 6th–7th centuries onward down to the 14th century (see Harris, 2005: ch. 1, app. A and B), that is, during the pre-Angkorian and Angkorian periods. Two early Sanskrit inscriptions (K. 40; K. 604) suggest a significant role of Brahmans in the earliest history of Buddhism, as is also observed in the Wat Maheyong inscription of Thailand (see p. 994). In terms of royal patronage, and hence in terms of the epigraphic record, Buddhism generally remained in the shadow of Śaivism during the 1st millennium CE, and Buddhist Sanskrit inscriptions are therefore relatively rare (Sanderson, 2003–2004, 424–433). Many scholars have assumed a phenomenon of syncretism between Buddhism and other religions of Indian origin, as well as local religious traditions, again relying heavily on epigraphic evidence, but the notion of syncretism is problematic (Estève, 2009).

The Buddhist Sanskrit inscriptions that we have almost exclusively record works of merit (donation, foundation), following the general pattern typical of Cambodian Sanskrit epigraphy in their textual structure, always engraved on stone and always entirely composed in verse form respecting the standards of the *kāvya* genre, entailing inclusion of a quantity of praise poetry (*praśasti*) directed at one or more deities as well as the issuing authority (usually the king) that often overshadows the record of the work of merit, which it is the basic *raison d'être* of the inscription to record. Many such inscriptions are accompanied (almost always: concluded) by business portions in Old Khmer.

During the reigns of Jayavarman V (r. 968/969–1000) and Jayavarman VII (r. 1182/1183–c. 1220), two kings who were particularly favorable to Buddhism, we witness an efflorescence of Buddhist Sanskrit epigraphy, including some of the most poetically impressive and historically informative Sanskrit inscriptions of Cambodia, that of Vat Sithor (K. 111; Sharrock, 2012), the group of Sanskrit and Khmer inscriptions of Bat Chum (K. 266–268; Mertens, 2005), and the enormous Buddhist donations recorded in the stelae of Ta Prohm (K. 273) and Preah Khan (K. 908). A recently discovered and still unpublished Sanskrit inscription (K. 1297) reveals the kings Jayavarman VI (r. 1080/1081–1107/1108) and Tribhuvanādityavarman (r. 1169–1177), about whom very little was known so far, to have been important supporters of Buddhism as well (Griffiths & Vincent, 2014); it focuses on donations at the apparently very important, though still unidentified, site named Vaṃśārāma in the Sanskrit inscriptions, Chpār Ransī in Khmer (Estève, 2009, 446–475).

Many scholars have invoked epigraphical evidence in an effort to trace the history of Theravāda/Śrāvakayāna in Cambodia, but the arguments are rarely conclusive (Harris, 2005, ch. 1) and generally rely on inscriptions in Khmer or Pali. It is Sanskrit inscriptions that tend to be invoked with regard to the question of earliest epigraphic attestations of Mahāyāna and Mantranaya (tantric) Buddhism (Woodward, 2004; Green, 2014); of particular interest in this connection is the unique *prastāra* (alphabet diagram) inscription from Bat Chum (K. 948; Cœdès, 1952b; Woodward, 2009).

Campā

The corpus of inscriptions of Campā spans from about the 5th to the 15th century. The inventory of these inscriptions, initiated, like that for the Khmer corpus, by G. Cœdès (Cœdès & Parmentier, 1923) and still maintained by the École française d'Extrême-Orient (Griffiths *et al.*, 2008–2009) covers about 240 inscriptions (each with a C. number), only a small percentage of which is Buddhist, the most important ones of these (in size) being in Sanskrit, some others in vernacular Cam (see p. 1001). Most of the published Campā inscriptions are readily available in one handy volume which makes available in English translation all French-language publications that had appeared before 2004 (Golzio, 2004). Since then, important publications include *The Inscriptions of Campā in the Museum of Cham Sculpture at Đà Nẵng* (Griffiths *et al.*, 2012; see also the website of the Corpus of the Inscriptions of Campā).

In Campā, as in ancient Cambodia, Śaivism was on the whole the dominant religion, and the fact that Buddhist inscriptions form a minority reflects this. Several authors have compiled surveys of Buddhism in ancient Campā, all relying partly or principally on inscriptions (Mabbett, 1986; Chutiwongs, 2005; Schweyer, 2009). The Buddhist inscriptions of Campā are very comparable in their physical appearance and contents to those of Cambodia; they are always engraved on stone and always composed in verse form (e.g. C. 66). Some of them are concluded by a business portion in Old Cam. Their distribution on the map of Campā is relatively even, although a certain concentration is notable in the 9th and 10th centuries in what are now Quảng Nam, Thừa Thiên-Huế, Quảng Trị, and Quảng Bình provinces. The Buddhism of ancient Campā was quite clearly part of the Mahāyāna/Mantranaya complex, with possible evidence of influence of the *Kāraṇḍavyūhasūtra* (Woodward, 2011). Absent from the mentioned overviews are some relatively early (c. 7th cent.?) *ye dharmāḥ* inscriptions (C. 46; C. 134) from Phú Yên and Quảng Nam provinces respectively, the former recorded to have been engraved on a molded tablet. A comparably early stela with image of a Buddha, recently discovered also in Phú Yên, is engraved two times with the *ye dharmāḥ* stanza, to which is added a statement of the “four truths of the noble” (Skilling *et al.*, 2010); two fragmentary molded tablets, on whose backs the *ye dharmāḥ* stanza is written in script that suggests a dating to the 9th century, were also found in Phú Yên (Skilling, 2003–2004; Skilling *et al.*, 2010). A 10th-century donative Sanskrit inscription (C. 167) relevant to the history of Buddhism remains unpublished.

Laos and Central Thailand

No early Buddhist inscriptions in Sanskrit are known from Laos. What early Buddhist inscriptions there are, are in Mon. The use of Sanskrit was certainly not prominent in what is now central Thailand, in the predominantly Mon-speaking polity that silver medallions and a stone inscription, dated on paleographic grounds to circa the 7th century CE, as well as later inscriptions and Chinese sources, call Dvāravatī (Boeles, 1964; Skilling, 2003; Revire, forthcoming a). Despite their primary connection with Mon rather than Khmer culture, almost all of the pre-Thai inscriptions of central Thailand have been included in the inventory of Cambodian inscriptions (see p. 992), and hence bear K. numbers. The few early inscriptions found in central Thailand that include Sanskrit portions listed by N. Revire (2014) are mostly fragmentary. Some Sanskrit inscriptions found in this area are clearly Śaiva; in several cases, it seems that materials belong to the Khmer cultural sphere rather than Dvāravatī or some other non-Khmer kingdom.

Still, the existence of a modest Sanskrit epigraphic tradition in Buddhist circles of Dvāravatī is undeniable (K. 577). It cannot be excluded that the important, but very fragmentary, Wat Maheyong inscription (K. 407), commonly assumed to come from the peninsular province Nakhon Si Thammarat, actually comes from a Dvāravatī site. Its script is virtually identical to that of the Dvāravatī Pali citation inscriptions (see p. 997) and records donations to the monastic community apparently in conjunction with Brahmans.

Nusantara

The southern segment of the Malayan peninsula belongs culturally to island Southeast Asia (Nusantara). The number of inscriptions found on the mainland is on the whole very limited, but the few that have been found in what is today Southern Thailand and Western Malaysia are almost exclusively Buddhist. Several specimens of Sanskrit *ye dharmāḥ* stanzas were found on the Thai side of the border (Skilling, 2003–2004), as were inscriptions citing the "four truths of the noble" (Revire, forthcoming b). Most of the epigraphic material on the Malaysian side has been thoroughly documented by M. Jacq-Hergoualc'h (1992; 2002). Among those of special interest are the two tablets found at sites in Kedah, thought to date to about the 7th century, that cite (one with one more verse than the other) the same passage from the *Sāgaramatiparipṛcchā*, a text of whose Sanskrit transmission only quotations survive and which is integrally known solely from Chinese (T. 397, 400) and Tibetan (D 152/P 819) translations (Quaritch Wales, 1940; Chia & Andaya, 2011, figs. 2.7–2.8).

Also from the same Kedah area are two rather small stone slabs, illustrated with the images of stūpas, around which are engraved the respective inscriptions. In the more recently discovered Sungai Mas inscription (Allen, 1986–1987), we find the *ajñānāc cīyate* verse, apparently a scriptural citation found in several epigraphical instances throughout Nusantara but one whose source text has not been identified (Skilling, forthcoming). In the more famous inscription of Buddhagupta (Chhabra, 1935), we find the same verse, but now combined with the phrase *mahānāvikabuddhaguptasya raktamṛttikavās[tavyasya]* ("of the great shipcaptain Buddhagupta, resident of Raktamṛttika") and *sarvveṇa prakāreṇa sarvvasmin sarvvathā sa[r]vva... siddhayāt[r]ā[h] santu* ("in all ways, everywhere and at all times may all... obtain success in their travels"). We are inclined to interpret this inscription as an ex voto of said Buddhagupta, explicitly stated to originate from a place that may well be the same as that after which was named the Raktamṛttikā Mahāvihāra in what is now Rajbadidanga, Murshidabad district, West Bengal, India (although problems with this interpretation remain; see Skilling, 2015). A substantial number of simpler texts containing in fullest form the phrase *jayasiddhayātrasarvvasatvāḥ* ("May all beings obtain victory and success in their travels!") or shorter versions but minimally the word *siddhayātra* engraved on unprepared river stones have been found near Buddhist sanctuaries in South Sumatra and South Kalimantan (de Casparis, 1956, 1–2; Suwedi Montana, 1990). We tentatively accept here the unpublished idea of P.-Y. Manguin (not shared by previous scholars) that these would also have been ex votos.

The Nusantara archipelago is richly endowed with a variety of molded clay tablets or sealings that are known in the secondary literature as votive tablets; recent scholarship has distanced itself from this term, based on the argument that such molded tablets "were not produced as a result of a vow but rather in ritual contexts in order to produce merit" (Skilling, 2005). If our understanding is correct that such clay tablets served a different ritual purpose than the *siddhayātra* stones, then we know of no other examples of ex voto inscriptions in the Buddhist world.

Molded clay tablets of the type discussed by P. Skilling, if they are inscribed, in the vast majority

of Nusantaran cases bear the *ye dharmāḥ* stanza, which is also often applied onto other small clay artifacts (e.g. miniature stūpas) by stamp (Griffiths, 2011b); unique for Nusantara is its reduction to the mantra *oṃ ye te svāhā* (Cruijsen *et al.*, 2012, 91). Very rarely attested citations of other texts on clay sealings have been discussed by A. Griffiths (2014a). There is a possible case of citation of the *Suvarṇabhāsottamasūtra* on a small stone tablet from Sumatra, resembling the aforementioned *Sāgaramatiparipṛcchā* citation tablets from Kedah (Griffiths, 2011b); a large stone from Lampung bears the *dhāraṇī* of the *Aparimitāyuḥsūtra*, and citations of other Mahāyāna scriptures are found on a substantial corpus of metal foil inscriptions, apparently serving as consecration deposits for statues; sometimes they are directly engraved on metal statues, sometimes on substantial plates, perhaps intended as consecration deposits for stūpas (Cruijsen *et al.*, 2012; Orlina, 2012; Griffiths, 2014a). Besides citation of verses or *dhāraṇīs* from Mahāyāna scriptures, there is also a growing body of citations of mantras from tantric scriptures including the *Hevajratantra* (Sundberg, 2003; Griffiths *et al.*, 2013; Griffiths, 2014a). A unique case is the *Mahāraudranāmahṛdaya*, a *dhāraṇī* with close intertextual connections to the *Sarvatathāgatatattvasaṃgraha*, engraved on a foil excavated near Borobudur and also transmitted on Bali, but not known from any other part of the Buddhist world (Griffiths, 2014c). Some textual material from or related to the *Sarvatathāgatatattvasaṃgraha* is also found engraved on stone stakes (*kīlaka*) apparently serving to demarcate ground plans of Buddhist monuments in central Java (Griffiths, 2014a). The aforementioned types of inscriptions often include one or more *bīja* mantras, but there are also several cases of sets of small gold foils engraved with individual *bījas* together intended to form *maṇḍalas* (Nihom, 1998; Griffiths, 2014b).

Several instances of the category of caption inscriptions are known from Java (Candi Borobudur and Candi Jago) and other islands (Batu Pahat in West Kalimantan; see Krom, vol. I, 1927, ch. 2; Brandes, 1904, app. I; Skilling, 2015). Due to lack of case endings, the identification of the language as Sanskrit cannot always be established with total certainty, as local languages have abundantly absorbed Sanskrit lexical material in stem forms. The inscription of Pasir Panjang on Karimun Besar (in the Riau archipelago) seems to be at once a caption identifying a pair of large natural indentations in a rocky outcrop as footprints of the Buddha and a memento of a figure calling himself Golapaṇḍita (perhaps "Scholar from Gauḍa"; Caldwell & Hazlewood, 1994).

We are able to treat here only in the most cursory manner what is, at least in terms of textual volume and richness as historical source material, the most important subclass of Nusantaran Buddhist Sanskrit inscriptions, namely those whose basic *raison d'être* is to record donations, installations of statues, and other such works of merit, in the literary form of the *kāvya* genre also current in Cambodia and Campā. Compared to those and other Buddhist epigraphic cultures, Buddhists of ancient Nusantara much more rarely opted for the production of bilingual inscriptions (one exception is the Sanskrit-Old Javanese Kayumwungan stela included in Long, 2014), and indeed – with exceptions in specific areas and periods – on the whole much more rarely used Sanskrit for donative records to begin with.

No such records have come to light on Borneo/Kalimantan, where epigraphic remains generally are very sparse; from Bali, which is rich in epigraphy and which has yielded several Buddhist citation inscriptions, not a single Buddhist donative inscription in Sanskrit has been recorded either. In Sumatra, the early Buddhist kingdom of Śrīvijaya seems hardly to have issued Sanskrit donative inscriptions, only two fragments of such documents being known so far (de Casparis, 1956, ch. 1 [fragments a, b]); in what is now Nakhon Si Thammarat province of Thailand, it has left the splendid Sanskrit *praśasti* known as the Ligor inscription of the late 8th century (Long, 2014, ch. 1). Much later, in about the 13th century, one more Sanskrit donative inscription was issued in this region by a king called Candrabhānu (Cœdès, 1918; 1992a; Jacq-Hergoualc'h, 2002). Back on Sumatra, the only significant group of Sanskrit donative inscriptions is that issued under the reign of Ādityavarman in West Sumatra in the 14th century, which are extremely challenging both by the state of preservation of several items and by the extremely unorthodox register of Sanskrit that is employed in all of them. These have not yet been served by a comprehensive publication (see Kulke, 2009; Kozok & van Reijn, 2010).

In the archipelago, Java has produced the greatest number of Buddhist Sanskrit donative inscriptions. The first substantial group is that issued, mostly in Siddhamatrika script and exclusively on stone, by the Sailendra dynasty in the 8th and 9th centuries, in Central Java (Long, 2014). A unique case is the Sanskrit inscription issued under King Garuṅ in the early 9th century that is included wholesale in the early-10th-century Wanua Tengah III copperplate inscription of Balituṅ in Old Javanese (Wisseman Christie, 2001; Griffiths, 2011a; Boechari, 2012, ch. 32, no. 6).

Sanskrit inscriptions are altogether very rare in the East Javanese period, that is, from the 10th century onward, but the few exceptions are almost all from Buddhist contexts (Bosch, 1919–21; Speijer, 1903; 1904; Poerbatjaraka, 1922; Kozok & van Reijn, 2010). All of them are engraved on stone or bronze statuary whose installation they record (and all but one are discussed in Reichle, 2007).

Inscriptions in Pali

Although Pali is a Middle Indo-Aryan language that originated on the Indian subcontinent in the late 1st millennium BCE, nearly all of the early epigraphic evidence of Pali comes not from India or Sri Lanka but from mainland Southeast Asia (comp. von Hinüber, 1985). Inscriptions in Pali begin circa the 5th century CE and are concentrated around the central Irrawaddy basin of modern-day Burma and the Chao Phraya and Pasak basins of modern-day Thailand, with a single 7th- or 8th-century example from Cambodia (Skilling, 2002). During this early period, epigraphic Pali is mainly used for inscribing textual citations. By the early 2nd millennium, Pali assumes a broader documentary function, and is used as a language for recording works of merit, a role formerly reserved for Sanskrit or vernaculars in these areas.

All 1st-millennium Pali inscriptions from Southeast Asia lack dates. Perhaps the earliest example of the dated inscription of Pali in the region is K. 997, which contains several verses paralleled in the *Telakaṭāhagāthā* and is otherwise in Khmer. Its date has been variously read as 761, 941, and 1061 CE, but a date before the 10th century is extremely implausible (Revire, 2012). Dates have been assigned to undated Pali epigraphs on the basis of paleography or archaeological context, but a complete analysis of the surviving corpus, in comparison with both regional and South Asian inscriptions, has yet to be undertaken (see Falk, 1997 for some South Asian comparisons). For this reason remarks concerning early chronology should be understood as provisional.

Burma (1st Millennium CE)

A mid-1st-millennium walled settlement called Śrīkṣetra, associated with the Pyu-speaking culture, is located near the modern town of Pyay in central lower Burma. This Sanskritized name, generally used in scholarship, is perhaps first attested in a bronze seal whose authenticity and precise date require further scrutiny (Krüger & Letz, 2006), or otherwise in Mon epigraphy of the 11th and 12th centuries, in which it is also called "Sisīt" (Blagden, 1920, 94, 135, 150), whereas in the 7th century, the Chinese monk Xuanzang referred to the site as Shili Chadaluo (室利差呾羅國; Wade, 2014). The earliest (13th-cent.) name for the site in Burmese epigraphy is Sirikhyattrā (Nyein Maung *et al.*, vol. I, 1972–2013, 262), and it is typically referred to as Sirikhetta or Sarekhettarā in later Pali and Burmese inscriptions and texts.

In 1897, two gold plates inscribed in Pali were discovered at Lebaw village seven miles south of Śrīkṣetra. Known as the Maunggan Gold Plates, and currently held at the British Library, the first of them begins with a citation of the *ye dhammā* stanza, paralleled in several locations in the Tipiṭaka (see Vin i.40). This is followed by a sequence of 14 numbered lists of aspects of the Buddhist teaching that refer, for example, to the "four truths of the noble" (*cattāri ariyasaccāni*) and the "five eyes" (*pañcacakkhūni*) and "ten powers" of a buddha (*dasabalāni*). The sequence is not a direct citation of any single text but rather a compilation of numbered lists found in multiple canonical sources. The second plate also begins with the *ye dhammā* stanza, and then lists the *iti pi so* formula of the nine qualities of the Buddha and the *svākkhato* formula of the six qualities of the *dhamma* (see AN iii.285). The first editor of the text dated the plates to the 1st century (Tun Nyein, 1898); L. Finot (1912) provided a more realistic date of the 5th century. On the basis of a reappraisal of the shape of certain letters, H. Falk (1997) has recently suggested a 6th-century date.

In 1926 the excavation of the Khin Ba mound situated within the wall of Śrīkṣetra unearthed the relic chamber of a ruined stūpa, inside of which was discovered, among other Buddhist artifacts, a gold manuscript consisting of 20 folios of inscribed Pali text bound with covers and secured with a gold wire, as well as a number of fragmentary inscriptions on gold and silver plates and a silver reliquary inscribed in Pyu and Pali (Duroiselle, 1926). This golden manuscript was first read in 1939 (Lu Pe Win, 1940), and has since probably received more scholarly attention than any other early Pali epigraphic document (Stargardt, 1995; 2000; Skilling, 2005b). It contains eight Pali citations traceable to various texts of the Tipiṭaka, including the *Paṭisambhidhāmagga* and *Dhammapada*, and has been dated to the first half of

the 5th century (Falk, 1997). A further inscribed gold plate bearing the *iti pi so* formula was discovered shortly thereafter at Kyundawzu, also within the walls of Śrīkṣetra (Duroiselle, 1928), and has been dated to approximately the same period (Falk, 1997).

Other Pali citation inscriptions on metal, stone, and clay from Burma probably date to the latter half of the 1st millennium, although in most cases, the material has not been subjected to paleographic scrutiny. From Kunzeik, near the modern city of Bago (ancient Pegu), is a stone slab, apparently contemporary with the Khin Ba mound finds, inscribed with the formula of "conditioned arising" in the specific form used in the opening of the Vinaya *Mahāvagga* (Luce, 1974; Skilling, 1997a). Many clay sealings inscribed in Pali (and vernacular Mon and Pyu) have been found at Śrīkṣetra and other sites in Burma (Mya, 1961). From Arakan in modern-day western Burma, there are also mid-1st century *ye dhammā* and other Pali inscriptions that await closer study (*ASB*, 1959; 1960; 1965). An interesting set of inscriptions from Śrīkṣetra cites verses with parallels in the *paritta* corpus of Pali recitational, ritual, and protective texts (Aung Thaw, 1993; Skilling, 1997b).

Thailand (1st Millennium CE)

Extensive early Pali epigraphic material is found also in neighboring central Thailand, connected with the Dvāravatī Kingdom (see p. 994). A recent survey notes 42 citation inscriptions, among which 26 are of the *ye dhammā* stanza, datable between the 7th and the 9th century CE (Revire, 2014). The content of these inscriptions is similar to the Burmese material in paralleling texts of the Pali Tipiṭaka. Supports include stone, brick, and molded clay. Distinctive to this region are Pali citation inscriptions on stone *dharmacakras*, "wheels of the law," and their supporting pillars/bases. Texts include excerpts concerning the four truths from the *Dhammacakkappavattanasutta*, excerpts from the *Udāna*, *Suttanipāta*, and *Dhammapada*, and the formula of "conditioned arising" (Brown, 1996). It is also from central Thailand that we find the earliest Buddha images inscribed in Pali (Skilling, 2003–2004).

The citation inscriptions mentioned here and in the previous section attest to the wide circulation and patronage of Pali literature in early Southeast Asia and to the fact that texts inscribed in Pali were regarded as ritual objects worthy of veneration in their own right. From the 11th century, however, Pali comes to be more widely used in donative inscriptions, as a language for documenting acts of merit and, often, to record the motivations for such acts.

Later Mainland Southeast Asia

Some of the earliest 2nd-millenium examples are Buddhist sealings inscribed in Pali and bearing names of donors, the kings Aniruddha and Sawlu of Pagan, which have been found across Burma, as far south as near Yangon and Myeik (Luce & Ba Shin, 1969–1970; Skilling, 2008). Dated Pali lithic inscriptions recording donations begin with Rājakumāra's Myinkaba Kubyaukgyi inscription of circa 1113 (Taw Sein Ko & Duroiselle, 1919) and the Shwegugyi inscription of 1131 (Pe Maung Tin & Luce, 1960). The latter is a particularly impressive example of Pali poetry, consisting of one hundred verses that include several citations from the Tipiṭaka and a condensed telling of the life of Gotama Buddha. The inscription also eulogizes the king, a feature found in other 2nd-millennium Pali inscriptions, such as one dated 1361 from Sukhothai that contains references to Pali scripture and commemorates the ordination of King Līdayya (Cœdès, vol. 1, 1924–1929, 111–116). A Pali inscription from Cambodia, long mistakenly regarded as the earliest from the country, also dates from around this period (1308 CE), and records the royal donation of a monastery along with villages and slaves (*dāsidāsa*) for its upkeep (K. 754).

Perhaps the longest donative inscription in Pali was established by King Dhammacetī in Bago in 1476 to commemorate the royal reestablishment of a pure Vinaya lineage in Rāmaññadesa (Taw Sein Ko, 1893). Known as the Kalyāṇī Sīmā inscription, and simultaneously produced also in a vernacular Mon version, it is one of the more historically significant Pali inscriptions, as its narrative of the history of Buddhism in Southeast Asia and Buddhist exchanges with Sri Lanka was later translated into multiple vernaculars and transmitted in manuscript form, entering into different regional chronicle (*vaṃsa*) traditions. Monolingual Pali inscriptions appear to be less common in Cambodia, Laos, and Northern Thailand, but a bilingual epigraph from Laos dated 1567 carries a long donative statement in Pali (Lorrillard, 2003a), and there are a number of Northern Thai Buddha images with citation and donative inscriptions in the language (Veidlinger, 2007).

Later in the 2nd millennium, inscriptions of Pali texts continued to be produced. The most ambitious is the inscription of all the root texts of the Tipiṭaka on 729 stone stelae at the Kuthodaw Temple in Mandalay, sponsored by King Mindon between 1860 and 1868. This was followed by a number of similar projects (the most recent in 1980), including one in 1913 that resulted in the inscription of Pali commentarial and subcommentarial texts on 1772 stelae (Vicittasiri & Kumārābhivaṃsa, 2000; Bollée, 1968). In 19th-century Thailand the *Dhammapada* and other Pali texts were inscribed at Phra Pathom Chedi in Nakhon Pathom (Skilling, 2000).

Southeast Asian Inscriptions in Chinese

If we limit our scope here to the period before the large-scale immigration of Chinese populations into Southeast Asia and the consequent efflorescence of a local Chinese epigraphic corpus, we must conclude that Chinese epigraphy is of almost negligible importance. A rather badly worn bilingual/digraphic Pyu-Chinese inscription dating to the 13th century, found at Pagan, reveals no explicit connection with Buddhism (Chen Yi-Sein, 1960). An inscription dated the 12th year of Ming emperor Wanli (1584–1585) from Bhamo (also in Burma), is not overtly Buddhist either (Duroiselle, 1929–1930). One or two molded tablets found at Si Thep show an explicitly Buddhist donor statement in Chinese, coupled with a line in Indic writing that has not so far been deciphered (Skilling, 2009, 121). Several Buddhist sealings from the 1420s bearing short inscriptions in Chinese have been identified among the tens of thousands of sealings and fragments thereof recovered from Wat Ratchaburana in Ayutthaya. Each begins with the words "Great Ming" (Da Ming; 大明), followed by the donor's name and a brief donative expression. At least one of the names inscribed appears to include a Chinese surname and non-Chinese personal name (Wade, 2000).

Southeast Asian Inscriptions in Tamil

Although Tamil inscriptions are not unknown in the strongholds of Buddhism that were Thailand and Burma (Francis, 2008–2009, 412), the only Tamil inscription from a Buddhist context known to us is the bilingual and digraphic Malay-Tamil Rokan inscription of 1261 from North Sumatra, recording a royal work of merit (Griffiths, 2014b).

Southeast Asian Inscriptions in Prakrit

The label Prakrit is occasionally applied by scholarship on Southeast Asian epigraphy rather loosely, or at least without a clear indication of the intended referent, simply to designate the language of inscriptions that display Middle Indo-Aryan features yet do not easily agree with standard Pali. In certain instances the designations Hybrid Pali, Sanskritized Pali, or simply incorrect Sanskrit might be more appropriate. In any event, the corpus of inscriptions from Southeast Asia that might plausibly be classified as containing a Middle Indo-Aryan language other than Pali is very limited. P. Skilling (2009) has identified several epigraphs of the *ye dhammā* verse in a Middle Indo-Aryan recension that differs from the standard Pali and Sanskrit recensions. This so-called *avaca* recension is attested in inscriptions from Bihar and Bengal, written in the rare Bhaikshuki script, and also in several inscriptions found in Thailand, Cambodia, and Southern Vietnam. The Southeast Asian examples include inscriptions of the verse on the back of a standing Buddha image from 7th-century Cambodia (K. 820; Skilling, 1999; 2002), as well as on a gold plate of unknown provenance (though purchased in Bangkok) currently in the Musée Guimet (Skilling, 2003–2004). Another intriguing item is a brief Prakrit (or possibly Hybrid Pali) donative inscription on the base of a small Buddha image released from a *cetiya* (shrine) atop Shinma Mountain (near Pakhangyi, Burma) during an earthquake in 1975. This inscription is written in the Bhaikshuki script, otherwise unattested in Southeast Asia (Sircar, 1977). It has since been reinstalled in the *cetiya* and only an inexact eye-copy remains available for consultation.

Inscriptions in Vernacular Languages

Inscriptions in Malay

The corpus of Old Malay inscriptions spans from the 7th through the 14th/15th centuries and has not yet been served by a comprehensive publication, but an inventory with extensive references to relevant publications will be included in a survey by A. Griffiths (forthcoming b). The corpus is surprisingly limited in size, given the likelihood that Malay served as lingua franca throughout the archipelago from early date, but most of the preserved Old Malay

inscriptions are explicitly Buddhist. Unique within Nusantaran epigraphy is a group of three inscriptions – found respectively at Sambas (West Kalimantan), Talang Tuwo (Palembang, South Sumatra) and Candi Sewu (Central Java) – stating explicitly in Old Malay that their text is a *praṇidhāna* (bodhisattva vow; see Griffiths, 2014a, 147; Cœdès, 1930; 1992; Boechari, 2012: ch. 32, no. II; on such *praṇidhāna*s, see also p. 1000; Tournier, 2014).

The majority of the Old Malay inscriptions of Śrīvijaya, belonging to the late 7th century, do not show any overt signs of a dominance of Buddhism in public life. However, such dominance is inferred from the evidence of the Talang Tuwo inscription, the occurrence of the term *siddhayātra* (see p. 994) in the Kedukan Bukit inscription, the occurrence of the phrase *vihāra ini* ("this monastery") in a fragmentary inscription from Palembang, the preponderance of Buddhist icons in the archaeological record, and other types of evidence (for the Śrīvijayan epigraphical material, see Cœdès, 1930; 1992; de Casparis, 1956: chs. 1–2; Boechari, 2012, chs. 24–25; Griffiths, 2011b).

A short inscription, possibly of the 8th century, engraved on a large sculpture of Avalokiteśvara from Sumatra, consists only in the words *ḍaṅ ācāryya sphuṭa* ("Master Sphuṭa"; Boechari, 2012, 373 [with unlikely reading *syuṭa*]). This might be a caption but is more likely a very brief donor statement. The sole vernacular element *ḍaṅ* being common to Malay and Javanese, the language of this short text cannot be determined with certainty. Two substantial donative texts in Old Malay from Sumatra are the late-10th-century Hujung Langit inscription from Lampung, not yet entirely published (Damais, 1962), and the late-13th-century Padang Roco inscription from the upper Batanghari (Krom, 1916). In the highlands of West Sumatra, the aforementioned king Ādityavarman and his rough contemporaries have also left inscriptions in Old Malay, of which one (a large stela at Pagaruyung) is clearly donative while the purport of the two other Old Malay texts (one of which also at Pagaruyung, the other at Lubuk Layang) is rather unclear; very little has been published on these inscriptions, and nothing very reliable (see de Casparis, 1995; Budi Istiawan, 2006). Other donative inscriptions in Old Malay, respectively from South and North Sumatra, have been published by A. Griffiths (2011b and 2014b).

Mention should be made here of a substantial number of rolled-up inscribed tin foils that have been found in recent years in the riverbed of the Batanghari at Muara Jambi. These seem to have functioned as amulets because they bear protective magical inscriptions that are definitely pre-Islamic but show no explicit signs of any specific religious context. Given the fact that no non-Buddhist inscriptions are known from pre-Islamic Sumatra, they may be loosely classified as Buddhist. A publication of a number of these is in preparation by A. Griffiths.

None of the few Old Malay inscriptions found on Java – except the aforementioned *praṇidhāna* found at Candi Sewu, known as the Mañjuśrīgṛha inscription – is Buddhist. The Old Malay Laguna copperplate inscription found near Manila on Luzon is a legal document that is not obviously Buddhist and is therefore only mentioned here.

Inscriptions in Javanese

The rich corpus of Old Javanese inscriptions, engraved both on stone supports and on copperplates, yields extensive data on Buddhism in early Java. This field too has not yet been served by any publications that cover more than specific subgroups of inscriptions, and many inscriptions whose readings have been published remain untranslated (important collections of Old Javanese inscriptions are Brandes, 1913; de Casparis, 1956; *Inscripties van Nederlandsch-Indië*, vol. I, 1940; Sarkar, 1971–1972; Boechari & Wibowo, 1985–1986; Boechari, 2012, ch. 32).

We may first mention the large corpus of short donor statements found on a number of Buddhist monuments from Central Java, most abundantly on Candi Plaosan Lor (de Casparis, 1958). As admitted above (p. 988), we occasionally encounter the problem of whether we may conclude from the occurrence of certain keywords that a given donative inscription is Buddhist. A case in point is the Wayuku inscription of 854 CE, which records the demarcation by Rakai Sisai Pu Virājā of the rice fields at Wayuku in order that they become rent-free holdings of his monastery at Abhayananda (lines 4–6: *manusuk savaḥ i vayuku sīmāni bihāranira i abhayananda*; Sarkar, 1971–1972, no. 18). Can this monastery (*bihāra*) here be assumed to have been Buddhist? This was certainly the case for the monastery of Pikatan (*bihāra i pikatan*), whose rise and fall in royal favor over nearly the entire duration of Central Javanese history is the subject of a unique historical retrospective in the Wanua Tengah III plates issued under King Balituṅ in 908 CE, already mentioned in p. 995, because as part of its recital of the historical facts it incorporates a Sanskrit inscription issued by a previous ruler. This text is very rich in information about the practice of Buddhism in early Java. Other copperplate charters issued during the reign of Balituṅ (e.g. Sangsang; Sarkar, 1971–1972, no. 72) also record donations to vihāras but tend to be poor in information that can directly be exploited by historians of Indian religions, whether these monasteries were Śaiva or Buddhist, because the richness of Javanese epigraphy lies rather in economic and onomastic domains.

The mentioned cases of ambiguity notwithstanding, Javanese epigraphy knew certain explicit markers of religious affiliation, notably the use of the keyword *sogata* (Skt. *saugata*), or the use of an unambiguous invocation at the start of an epigraph: from the Buddhist tantric mantra *ṭaki hūṃ jaḥ* (Griffiths, 2014a, 178) to entirely unmistakable opening phrases such as *namo sarvabuddhāya* ("Hail to all the buddhas!"; Harahara inscription; Brandes, 1913, no. 55 – this text concerns a sanctuary named *dharmma lpas kapodgālikanani kulasantānānira mpuṅku iṅ nairañjanā*: "the tax-exempt foundation that is the private property of the family of the master of Nairañjanā") or *namo 'stu sarvabuddhāya* (Śobhāmṛta; Titi Surti Nastiti, 2007); in one inscription, we actually read *oṃ namaś śivāya namo buddhāya* ("Hail to Śiva! Hail to the Buddha!"; Taji Gunung; Sarkar, 1971–1972, no. 80). Among significant Buddhist land grants, mention may finally be made here of the Ālasantan charter of 939 CE (Wibowo, 1979), recording transactions at the heart of the Trowulan complex that would in later centuries become the capital of the Majapahit Kingdom. Two short inscriptions of 10th- and 13th-century East Java (Kubur Panjang and Lucem; Damais, 1952, 242; Hadi Sidomulyo, 2012–2013, 102) record the planting of Bodhi trees and are hence arguably traces of Buddhist practices.

A small number of recent finds at and around the major Buddhist complex at Muara Jambi in Sumatra includes two remarkable documents in Old Javanese, a language whose cosmopolitan allure evidently was able to carry it far from the island of Java. These are a donative statement by a certain Mpu Kusuma on a *makara* (roughly, crocodile image) balustrade (Griffiths, 2012) and an amazing tin amulet-roll engraved in Grantha script but Old Javanese language (Griffiths, forthcoming c).

Inscriptions in Balinese (and Old Javanese from Bali)

The epigraphical record of the island of Bali comprises inscriptions in native Old Balinese, in Old Javanese, and in Sanskrit. There are some publications comprising readings of epigraphs, sometimes with translations (van Stein Callenfels, 1926; Stutterheim, 1929–1930; Goris, 1954). But on the whole, there is very little secondary literature to guide one in accessing the epigraphic material of the island, even less in a European language. Some Buddhist functionaries figure in a certain number of inscriptions, but the transactions being recorded do not seem to show a specific connection with Buddhism. In a group of late-10th-/early-11th-century inscriptions, we find the elements Nalanda/Nalənda (*sic*; for Nālandā) and Vārānasī (*sic*) integrated into the titles of such officiants, which suggest some degree of knowledge of the Buddhist as well as the Śaiva cosmopolis in India, although clearly the meaning here is not that these individuals actually came from India (Goris, 1954, no. 302, Va5; no. 303, V5; no. 305, IXb3; see also Goris' index, under *wandāmi* and *sogata/nogata*).

Inscriptions in Khmer

Khmer, an Austroasiatic language related to Mon, was used alongside Sanskrit as epigraphic language in the Khmer cultural sphere from the early 7th until the early 15th century (for sources, see p. 992), during which period the language is called Old Khmer. Old Khmer was used either by itself or in bilingual documents normally opening with a Sanskrit portion. Most of the inscriptions that are relevant for Buddhist studies are listed by I. Harris (2005, app. A). Donative inscriptions on stone represent the largest volume of epigraphs in Old Khmer, and the language is in such contexts exclusively used to record the quotidian aspects of the transactions in question: dates, names of persons, toponyms, items donated, and so forth. Such documents reveal much about the economic life surrounding sanctuaries, and about the types of artifacts used in cult (Soutif, 2009). Names of deities tend to figure more prominently in the Sanskrit portions, if there are any, but the monolingual Old Khmer inscription K. 163 (7th cent.) clearly implies a temple in which the triad Buddha-Maitreya-Avalokiteśvara was installed (Green, 2014, 72). Clear indications of the presence of tantric Buddhist cult of the *Guhyasamāja* tradition are contained in another inscription (K. 1158), whose Khmer portion mentions the installation of nine Buddhist sculptures on a hill named Abhayagiri (Szántó, forthcoming).

There is a growing corpus of short inscriptions on ritual utensils in bronze, with statements in Old Khmer recording donation to deities, some of them Buddhist (K. 943; K. 1296; Estève & Vincent, 2010; Griffiths & Vincent, 2014). Normally a donation is explicitly recorded, but the inscription *vraḥ*

śrījayapratiṣṭhā ("holy foundation of Śrī Jaya"), possibly signifying sponsorship by Jayavarman VII, is found on a Buddhist triad in bronze of which several specimens are now known (K. 945; Vincent, 2013, fig. 5). Furthermore, there is a large corpus of short stone inscriptions engraved on a number of monuments founded during the reign of this Buddhist king: these represent a unique mix of the caption and donation types, for they record the names of deities that were formerly present in the form of presumably metal sculptures (none of which is preserved), and these names in turn are in many cases derived from the names of individuals who were presumably responsible for the commissioning of the images named after them (Maxwell, 2007). This large corpus is not exclusively Buddhist but rather represents a kind of pantheon of late-Angkorian Cambodia; some of those which are Buddhist have turned out to be useful for the study of Khmer Buddhist art (Sharrock, 2011).

A substantial number of Khmer inscriptions engraved on gold plates, issued by Ayutthayan kings in the 15th and 16th centuries, have also been found in the Tenasserim region of what is now peninsular Burma, as well as at Ayutthaya-period sites in Thailand (Vickery, 1971). These record the conferring of titles on prominent individuals, some of whom members of the saṅgha. Another example of the use of Khmer as an epigraphic language in Buddhist contexts outside of the Khmer realm is the donative inscription on a bronze Buddha from peninsular Thailand, dating somewhere in the 12th–14th centuries (K. 504; Woodward, 2005, 193–195).

There are, finally, about 100 stone inscriptions in Middle Khmer, from the 16th through the 18th century (the so-called *Inscriptions modernes d'Angkor*) edited in a series of articles by Saveros Pou, initially writing under the name Saveros Lewitz (1972; see also Jenner, 2011, for further references). All of these are *satyapraṇidhān*, statements in the first person of accomplished pious works accompanied by the dedication of the accruing merit toward happy and prosperous rebirths, protection from danger, and the eventual enlightenment of self and/or others (see p. 999). Being engraved on pillars of Angkor Wat, at the behest of members of the very high aristocracy, these inscriptions constitute the bulk of post-Angkorian Khmer epigraphy.

Inscriptions in Cam

Old Cam, an Austronesian language quite closely related to Old Malay, was used alongside Sanskrit as epigraphic language in ancient Campā and is attested between the 5th and the 15th century (for sources, see p. 993). A small number of inscriptions in this language cast light on the patronage of Buddhism at different periods. A damaged and still unpublished inscription from Huế in northern Campā, datable to about the 7th century, contains the keywords *vihāra* and *bhikṣu*, and so – if these are reliable indicators of Buddhism – indicates a form of the religion in which Sanskrit served as church language. A bilingual Sanskrit-Cam inscription from the farthest south of Campā (C. 23) dated to 829 CE records the foundation of vihāras of the Buddha (*jina*) and Śiva (*śaṅkara*), thus revealing at least simultaneous patronage to Buddhism and Śaivism, if not already some early form of the syncretism between the two that is evident in later centuries (e.g. C. 213; Lepoutre, forthcoming). The king is praised in C. 211 (1050 CE) as *tuṁ sarvvaśāstrāgama sidaḥ śaivasaugatasiddhāntakulāvdhimada* ("knowing all treatises and traditions, that is intoxicated by the splendid oceans which are the doctrines of the Śaivas and the Buddhists"). Influence of Buddhism on royal ideology is found in a number of inscriptions (C. 55, 83, 89, 90, 92, 101), in which the king is said to be endowed with 32 or 33 characteristics (*lakṣaṇa*), which seems to be at least in origin a Buddhist concept, although the context is not always Buddhist in these cases; it is only in two inscriptions (C. 89; C. 122), which are clearly Buddhist in orientation, that the king is called *cakravarti* (universal emperor; Schweyer, 2006).

Inscriptions in Pyu

Although this is a subject of some controversy, we are inclined to assume that the inscriptions engraved in Pyu script basically represent a single language. This language is only very partially understood at present but was probably a member of the Tibeto-Burman family. Only a small number of known Pyu inscriptions have been deciphered and analyzed (Blagden, 1913–1914; Shafer, 1943; Luce, 1985; Krech, 2012). Nevertheless it is clear that several of them must have been related to the practice and institutions of Buddhism in ancient Burma. Some items in the Śrīkṣetra Museum, although undeciphered, are engraved on stone stelae or slabs displaying Buddhist motifs; the aforementioned bilingual inscription from Śrīkṣetra (see p. 992) is engraved on a Buddha image, and although the text does not evidently record installation of the image, the contents do clearly emanate from a Buddhist context. The quadrilingual Myinkaba Kubyaukgyi edict (see p. 997), its Pyu version edited by Blagden (1919), is unmistakably a

Buddhist donative inscription. The aforementioned silver reliquary bears caption inscriptions in Pyu identifying the major and minor figures depicted in repoussé (Luce, vol. I, 1985, 137). We can mention here finally the Hpayahtaung Urn, discovered in 1993, which clearly invokes the triple jewel (line 1: *būdha . . . saṅgha . . . radana*, the latter word for Skt. *ratna*, so we have an unmistakable mention of at least two of the three Buddhist jewels; rendered almost identically in the anonymous reading published on unnumbered pages between the articles Tun Aung Chain, 2003 and San Win, 2003). But such cases are rather rare in most texts that we have seen: from a comparative Southeast Asian perspective, the extremely low proportion of Indic loanwords in the Pyu inscriptions is remarkable. Hence, as long as most documents remain untransliterated and the language largely undeciphered, we can only speculate about how they might be classified. An inventory of the Pyu corpus will be offered in Griffiths *et al.*, forthcoming.

Inscriptions in Mon

The Austroasiatic Mon language was used to write donative inscriptions from the 6th century CE onward (Cœdès, 1952a). Inscriptions in Mon from the 1st millennium have been discovered across central mainland Southeast Asia, in areas that are part of modern-day lower Burma (possibly 6th–7th cents.; Mya, 1961; Myint Aung, 1999), central, northern, and northeastern Thailand (6th cent.; Bauer, 1991a; 1991b; Revire, 2014), and Laos (8th cent.; Gagneux, 1972; Guillon, 1974). These include epigraphs on terracotta sealings, stone slabs, Buddha images, and, in Thailand, *dharmacakra* wheels, possibly miniature stūpas, and stones that have been identified as *sīmā*, boundary markers within which monks perform ritual acts (*saṅghakamma*), although whether this exclusive function can be applied to all of such stones in 1st-millennium Southeast Asia remains uncertain (comp. K. 981, clearly documenting the function of one of them as a ritual boundary; see also Murphy, 2014). A number of these artifacts bear bilingual inscriptions, with a donative portion in Mon and a textual citation or caption inscription in Pali. Although some 1st-millennium *sīmā*s from northeastern Thailand are inscribed in monolingual Sanskrit (Cœdès, 1958), bilingual Mon and Sanskrit inscriptions are unknown.

Some inscribed *sīmā*s present Mon glosses to carved depictions of *jātaka* scenes or episodes of the life of Gotama Buddha (Bauer, 1991a; Murphy, 2014). A similar Mon-inscribed *sīmā* has also been found in Thaton in lower Burma, along with a separate dedicatory inscription in Mon, dated to the 11th century (Luce, vol. II, 1985, plate 92d). Caption inscriptions engraved into their support or written on it in ink accompany narrative frescoes and terracotta plaques at some temple sites in Pagan and elsewhere in Burma (Duroiselle, 1921b; Luce, 1961; 1975; Shorto, 1966). At least 15 lengthy stone donative inscriptions in Mon date to the reign of King Kyanzittha of Pagan (r. c. 1084–1113), the southernmost of which is from Tavoy (Chit Thein, 1965). A large quantity of sealings inscribed in Mon and dated to the 11th and 12th centuries have been found in lower and upper Burma and across central and northern Thailand, evidence of the wide geographic diffusion of Mon-speaking communities well into the 2nd millennium (Guillon, 1977; Luce & Ba Shin, 1969–1970). The Mon epigraphy from several 13th-century temple complexes in Lampun, Thailand, is particularly noteworthy (Halliday, 1930). Later Mon inscriptions are concentrated mainly in lower Burma (Chit Thein, 1965), with several examples from Thailand and perhaps even as far west as Arakan. These mainly comprise donative inscriptions on stone slabs and also on bells plus the aforementioned unique copperplate (Shorto, 1971).

Inscriptions in Burmese and Arakanese

Inscriptions in central Burmese and the southwestern Burmese dialect of Arakanese are the most numerous among vernacular Buddhist epigraphy from Southeast Asia. Over 600 early stone inscriptions from Burma and Arakan are presented in facsimile reproductions in the major work *Inscriptions of Burma* (ed. Luce & Pe Maung Tin, 1934–1956). The focus of the volumes is on inscriptions from Burma in any language up to the mid-14th century, although the majority of the items included are central Burmese. Readings of Burmese and Pali lithic inscriptions have also been published in Roman and modern Burmese script transliteration. During the colonial era, there were a number of such publications (see generally the introductory remarks in Duroiselle, 1921a). A substantial effort by Burmese scholars has produced six volumes that cover approximately 900 donative lithic inscriptions produced between the mid-11th and the late-18th century (Nyein Maung *et al.*, 1972–2013), although many others remain unpublished.

The beginning of vernacular Burmese epigraphy is conventionally dated to the Burmese face of the quadrilingual Myinkaba Kubyaukgyi inscription of Rājakumāra (mentioned in on pp. 997, 1001).

six volumes under the title

A number of inscriptions carry earlier dates, but their authenticity in many cases is uncertain, as some contain paleographic or calendrical inconsistencies that suggest they may be unfaithful copies. The only translation into a European language of a considerable number of Burmese inscriptions is outdated, although it may still serve as an introduction to the material (Tun Nyein, 1899). A project was begun by G.H. Luce, Pe Maung Tin, and Ba Shin in the mid-1950s to critically edit and translate early Burmese inscriptions into English, although only a handful were published in the first (1960) and third (1963) issues of the *Bulletin of the Burma Historical Commission* (for a list of translations of Old Burmese inscriptions, see Frasch, 2005).

Aside from lithic inscriptions, there is a large corpus of Burmese ink epigraphy. These comprise donative texts and horoscopes written on temple walls (Swe, 2001; Ba Shin, 1964) and caption inscriptions to narrative registers in plaques and painted murals, which date from the 12th century up to the present day (Ba Shin, 1962; Munier & Myint Aung, 2007). Various other objects carry early to late 2nd-millennium Burmese inscriptions, including sealings (Mya, 1961; Aung Kyaing, 2011), bells (Sein Maung U, 2014), lacquerware, wood and metal images, monastic utensils, and metal plates, most of which remain unpublished. A substantial collection of over six thousand 19th-century donative inscriptions on copper plaques from the Shwedagon Pagoda have been edited (Kyan & Yi Yi, 2007). Burmese-language inscriptions have been found outside of Burma, including at Bodh Gaya (late 13th cent.; Luce, 1976) and in Northern Thailand, where examples include an epigraph in Burmese, Thai, and possibly also Mon, on a Buddha image (mid-16th cent.; Kraisri, 1960; Penth, 1976, 98–102).

Inscriptions in Tai Languages

Tai languages were used in Buddhist epigraphy from the 13th century onward. Speakers of various Tai dialects settled across mainland Southeast Asia over the course of the 2nd millennium, and several different Tai languages have found usage in epigraphy, among them Lao, Central Thai, Tai Yuan, Tai Lue, and Khoen.

An important published corpus of vernacular Tai-language inscriptions from Thailand is the *Prachum charuk sayam/Recueil des inscriptions du Siam*, edited in modern Thai script and translated into French by G. Cœdès (1924–1929). The series was continued, without translation, for an additional six volumes under the title *Prachum sila charuk* (1924–2004), bringing its total number of inscriptions to 327. A more recent corpus is the five-volume *Charuk nai prathet Thai* (1986), published by the Fine Arts Department of Thailand, which is arranged by script (Pallava, Late Pallava, Mon, Khom/Old Khmer, Tham/Dhamma, and Thai) and ranges chronologically from the 7th to the 19th century. Both collections cover vernacular Tai inscriptions as well as materials in Pali, Sanskrit, Tamil, Khmer, and Mon, found in Thailand. The most comprehensive presentation of epigraphy from Northern Thailand is the *Corpus of Lān Nā Inscriptions*, now in its 15th volume (Penth *et al.*, 1997–2013; compare also Prasert, 1992–2008; and the websites of the Corpus of Lan Na Inscriptions and The Inscriptions in Thailand Database). P.-M. Gagneux (1977) inventoried Buddhist inscriptions from Laos, although there have been relatively few publications of Tai-language epigraphy outside of Thailand (Lorrillard, 2003b).

The earliest epigraphic evidence for any Tai language is generally dated to the stela of King Ramkhamhaeng established in 1292, an inscription that contains a lengthy eulogy to this king and celebrates his many works of merit and the prosperity of the central Thai kingdom of Sukhothai (13th cent.–1438) during his rule. It is written in what scholarship has referred to as the Sukhothai script (despite the fact that examples of this script are found in northern Thailand) and explicitly credits this king with the invention of this writing system, which moreover displays certain peculiarities, when judged against Indic and other regional scripts, in its representation of vowels. This is the most intensively studied vernacular Buddhist inscription from mainland Southeast Asia, and controversies surround its date (for an overview of the debate, see Terwiel, 2010). This and several other early vernacular inscriptions from Sukhothai and elsewhere have been edited and translated into English (Prasert & Griswold, 1992). H. Penth (1996) has proposed a date of 1219 for a Tai donative inscription from Phrae, northern Thailand, written in a script similar to that used in the Ramkhamhaeng stela. The earliest vernacular inscription from northern Thailand written in a distinctive northern Thai script is found on the pedestal of a Buddha image dated 1465 (Penth, 1975). Two very short painted epigraphs in vernacular Tai have been discovered in caves near Luang Prabang, Laos, and have been tentatively dated to the 14th century on the basis of similarities with Sukhothai script (Ferlus, 1995). Otherwise the oldest Lao inscription is dated 1494, although this example displays certain affinities with the *fak kham* ("tamarind pod") script used in central and northern Thailand (Lorrillard, 2008).

Tai-language Buddhist lithic inscriptions have so far not been reported from China, despite the large number of surviving Tai Buddhist manuscripts in Yunnan. Several Tai lithic inscriptions have been found in Kengtung, Burma (see *Prachum sila charuk*, 1991), the earliest dating to the mid-15th century (Prasert & Griswold, 1992). Two 16th-century inscribed Buddha images are known from the Shan States, Burma, possibly written in Tai Lue (Griswold, 1959). Documented inscriptions in Tai Ahom from northeastern India are not obviously Buddhist in orientation. More research is needed on these areas. In non-Tai speaking regions of Burma, donative ink inscriptions in Tai have been discovered, for example at the Ananda Temple in Pagan (see *Prachum sila charuk*, 1991) and also a short caption in Thai in a 19th-century temple in Minbu, whose mural registers are otherwise captioned in Burmese (Orawin, 2010).

The mid-14th-century caption inscriptions at Wat Si Chum, an important Sukhothai temple, have received considerable scholarly attention. These comprise vernacular glosses to the first one hundred verse *jātakas*, illustrations of which were engraved on slabs placed in the temple (Skilling, 2008). Thai and Lao murals are also often accompanied by caption inscriptions. A particularly extensive example of central Thai vernacular citation inscription are the over 1500 inscribed stone slabs at Wat Chetuphon in Bangkok, commissioned by the Thai king Rama III in the 1830s, which include excerpts from the Tipiṭaka, *Mahāvaṃsa*, medical and *nīti* treatises, Thai poetry, and the Thai *Rāmāyaṇa* (Niyada, 2001).

Epigraphy: Tibet and Central Asia

This article deals with Tibetan inscriptions found in the Tibetan parts of the People's Republic of China as well as in Nepal, northern India, northern Pakistan, and Mongolia. The non-Tibetan epigraphs in these areas are partly covered elsewhere in this volume and partly still waiting to be studied.

Research History

S. Csoma de Kőrös, widely considered the founder of Tibetan studies in general, also provided the first study of a Tibetan inscription (Csoma de Kőrös, 1838). The fragmentary short text is found on the lower right part of the so-called Buddha Rock near Skardu (Baltistan, Pakistan) and refers to the relief carvings above it. The circumstances under which the inscription was found and documented were recently recounted by D. Schuh (2011, 338–350), who also discusses its subsequent research and provides his own edition together with a German translation.

Two other noteworthy 19th-century studies of Tibetan epigraphs are E. Schlagintweit's article (1864) on an extensive inscription in Hemis (Ladakh, India) and G. Huth's monograph (1894) on the epigraphic evidence in Tsagaan Baishing (Mongolia). In both places, the inscriptions portray the historical background of the respective temples and are couched in Buddhist terms.

The first systematic survey of Tibetan inscriptions was conducted by the missionary August Hermann Francke in Ladakh. In addition to several short articles, he authored two self-published monographs on 145 historical inscriptions on rock and stone (Francke, 1906; 1907). Most of these inscriptions are rather short, and only some of them contain explicit Buddhist references. He himself states that much of his epigraphic research cannot claim to be up to scholarly standards since the *in situ* transcriptions were mostly prepared by his local assistants (Francke, 1906, preface).

The next major contribution to the field of Tibetan epigraphy was made by G. Tucci. Between 1926 and 1954, he conducted several field trips to Nepal, the Indian Himalayas, and central Tibet, where he documented inscriptions at various sites. Notable publications include his studies of five inscriptions in central Tibet (Tucci, 1950) as well as his edition and Italian translation of the now famous "renovation inscription" in the monastery of Tabo (Spiti Valley, Himachal Pradesh, India; Tucci, 1935). The latter epigraph was subsequently also the object of research by E. Steinkellner and C. Luczanits (1999), L.S. Thakur (2001), and K. Tropper (2008a).

The person whose name is most closely linked with Tibetan epigraphy is the British diplomat and scholar H.E. Richardson. Staying in Lhasa during 1936–1940 and 1946–1950, he documented a considerable number of inscriptions in central Tibet. They were published in a series of articles, starting from 1949, and in a monograph dedicated to the Qing dynasty inscriptions at Lhasa (Richardson, 1974). His work on some of the earliest extant Tibetan inscriptions, dated to between 764 and 840, was later brought together in a collected volume that also contains articles on some fragments of uncertain date as well as on two inscriptions of the 11th and 15th centuries (Richardson, 1985). The epigraphs studied by him are predominantly of a historical nature, and not all of them contain Buddhist references. The Old Tibetan inscriptions that he examined were reconsidered in monographs by Y. Wang (1982), Bsod nams skyid (1984), F.K. Li and W.S. Coblin (1987), K. Iwao *et al.* (2009), and Pa tshab Pa sangs dbang 'dus (2011). The latter two publications also provide several more Old Tibetan inscriptions that had been made available in the late 20th and early 21st centuries through various publications of different authors.

Due to the political situation, fieldwork in central and eastern Tibet became completely impossible for Western scholars again from the early 1950s until the mid-1980s. In Ladakh, August Hermann Francke's pioneering work was taken up by P. Denwood, who visited the temples at Alchi in 1975 and recorded 12 inscriptions there. They were later published together with a number of rock inscriptions that he found in the vicinity of Alchi (Denwood, 1980). He also studied several other inscriptions in the western Himalayas (Denwood & Howard, 1990; Denwood, 2007).

E. Steinkellner (1995), L. Petech and C. Luczanits (1999), and L.S. Thakur (2001, 226–283; 2006) published much of the rich epi

(2001, 226–283; 2006) published much of the rich epigraphic legacy of another important site in northern India, namely Tabo Monastery in Spiti Valley. The research carried out in Tabo served as a catalyst for several epigraphic studies and projects that were subsequently conducted at the University of Vienna and the Austrian Academy of Sciences and dealt with inscriptions of both the western Himalayas and central Tibet. This resulted in numerous articles and a number of book-length publications (Tropper, 1996; 2005; 2008b; Tropper & Scherrer-Schaub, 2013). The University of Vienna also hosts a Web site that provides extensive documentary material of Tibetan inscriptions (mainly from northern India) as well as a constantly updated bibliography aiming at a comprehensive coverage of publications on Tibetan epigraphy.

Generally, epigraphic research has always been a somewhat neglected field within Tibetan studies, as it often necessitates fieldwork in places that are not easily accessible for both political and geographical reasons. While the situation in the culturally Tibetan areas of India and Nepal has notably improved since the 1990s, many of the inscriptions in China's Tibetan Autonomous Region (TAR), Qinghai, Gansu, Sichuan, and Yunnan are still inaccessible for Western scholars. The future development of Tibetan epigraphy is thus difficult to predict.

Types of Inscriptions

A detailed model for the classification of Tibetan inscriptions was proposed in C. Scherrer-Schaub (2013; see in particular table II). A basic distinction can be made between inscriptions on movable objects (pillars, stone slabs, *tsha tsha*s [small clay images], statues, etc.) and those on immovable supports (rocks and cave and temple walls). In addition, the inscriptions differ in regard to the way they are prepared, essentially subdividing into those that are cut into their respective support in relief or counterrelief (see figs. 1 & 2) and those that are written on the support's surface in ink or paint (see fig. 3).

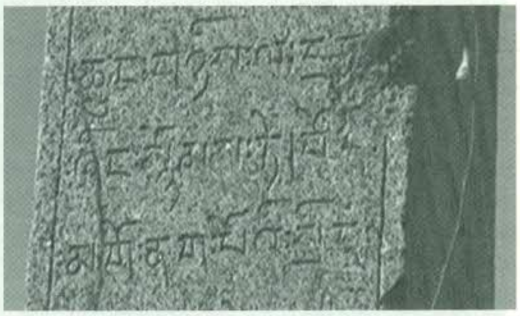

Fig. 2: Detail of the east face of the Zhol *rdo ring*, with text cut in counterrelief (Lhasa; photo by author).

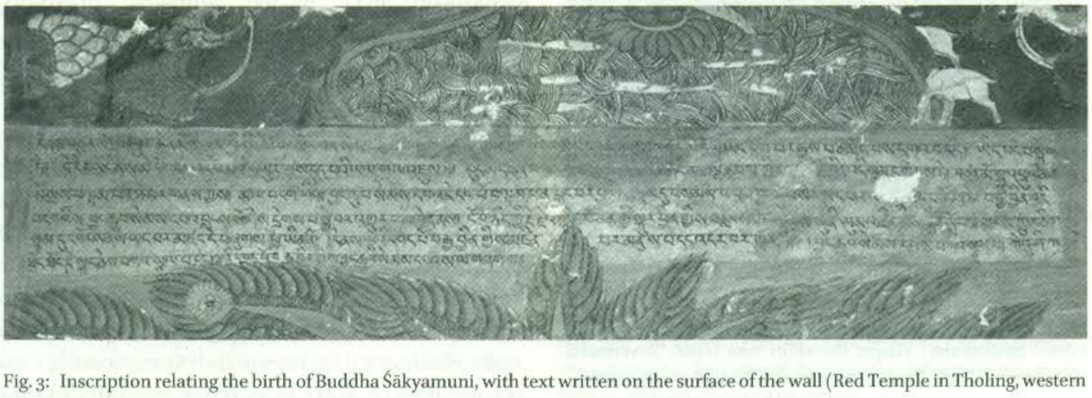

Fig. 3: Inscription relating the birth of Buddha Śākyamuni, with text written on the surface of the wall (Red Temple in Tholing, western Tibet; photo by author).

The latter are often combined with paintings, most notably in the case of short captions (see fig. 4).

There is, however, no universally accepted definition of what constitutes an inscription, and sometimes the use of the term is restricted to the cut type. Moreover, there are hybrid versions, where the characters are both cut and painted, as well as marginal cases, such as when the text is written on a sheet of paper that is glued to a wall. Instances of the latter type have been referred to as "paper inscriptions" (de Rossi Filibeck, 1999; Wood, 2013; see also Petech, 1977, 3). A detailed study of the techniques, tools, and materials used in the production of these various epigraphs is still wanting.

The vast majority of inscriptions is executed in *dbu can* script, and the relatively rare use of *dbu med* is restricted to the surface type (see fig. 5). Some notable early *dbu med* inscriptions (11th/12th–14th cents.) were found in Ladakh, especially in and near the monastery of Alchi (Denwood, 1980; Tropper, 1996; 2014). The *lantsha* script is sometimes used for short mantras and *dhāraṇīs*, which are typically placed on narrow bands extending across the lower parts of Tibetan temples, or on door posts, lintels, and rafters (see fig. 6).

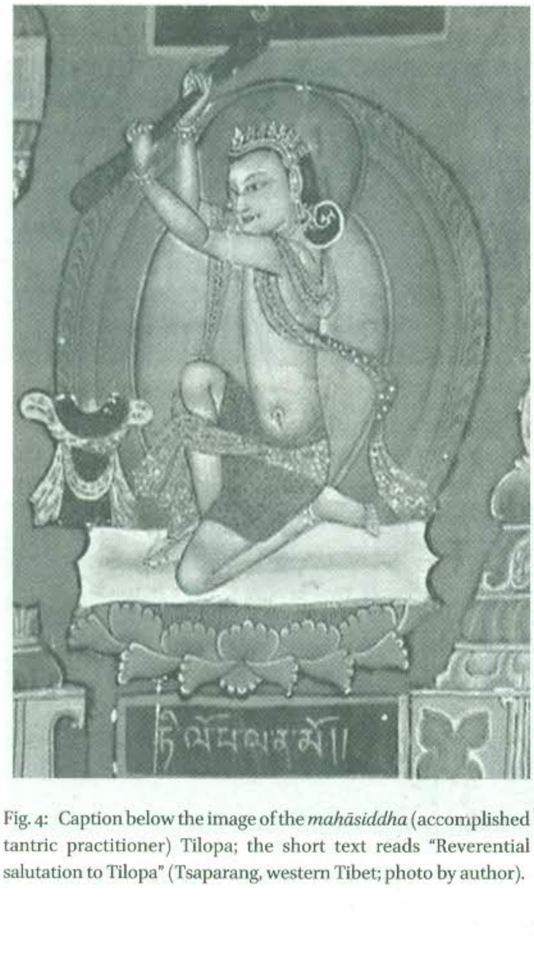

Fig. 4: Caption below the image of the *mahāsiddha* (accomplished tantric practitioner) Tilopa; the short text reads "Reverential salutation to Tilopa" (Tsaparang, western Tibet; photo by author).

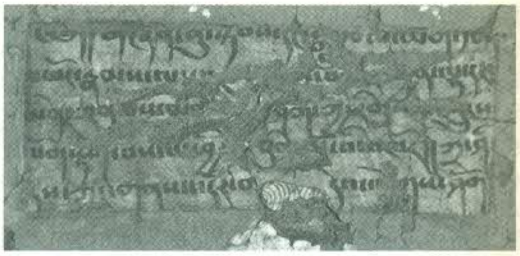

Fig. 5: Damaged *dbu med* inscription in Pang gra phug (western Tibet; photo by Heidi and Helmut Neumann).

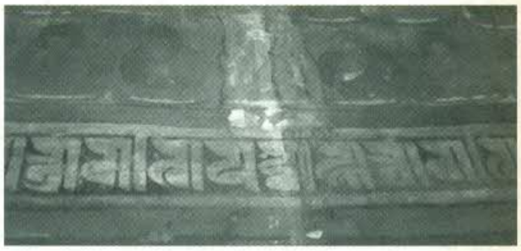

Fig. 6: *Lantsha* inscription on lintel with repetitive mantra *oṃ maṇi padme hūṃ* (Shel, Ladakh; photo by author).

Regarding contents, Tibetan epigraphs can be broadly divided into historical and religious, but in practice, the two categories are often combined or overlap. Thus, many historical inscriptions open with some *maṅgala* verses referring, for example, to the "three jewels" (*triratna*; i.e. the Buddha, the dharma, and the saṅgha) or to the "three bodies" (*trikāya*) of the Buddha (*dharmakāya, sambhogakāya*, and *nirmāṇakāya*), and usually the historical information is embedded in a Buddhist context (see de Rossi Filibeck, 1999, 194–199; Huth, 1894, 6–23; Richardson, 1974, 62–63). Similarly, historical inscriptions found in temples or monasteries sometimes contain a register (*dkar chag*) of the structure's most important sacred objects (statues, manuscripts, relics, etc.) and wall paintings (Huth, 1894, 10–11, 21–22; Tropper, 2007; 2014). Purely religious inscriptions include those that consist of quotations from Kanjur or Tanjur texts (Steinkellner, 1995; Tropper, 1996; 2005; 2010), as well as of mantras and *dhāraṇī* – most notably the ubiquitous *oṃ maṇi padme hūṃ*.

Questions of Dating

Dating Tibetan epigraphs is often problematic, especially if they do not provide any internal chronological evidence, and many of the difficulties encountered are similar to those met when dating Tibetan manuscripts on paper.

The methodological principles for dating the latter are discussed in C. Scherrer-Schaub (1999) as well as in C. Scherrer-Schaub and G. Bonani (2002), and many of the formal characteristics specified there are also relevant for inscriptions. In particular, the occurrence and frequency of *gi gu log* (inverted grapheme for *i*), *da drag* ("strong *d*"; added to syllables ending in *n*, *r*, and *l*), *ya btags* with *m* before *e* and *i* (spelling e.g. *myed* and *smyin* instead of *med* and *smin*), and the horizontal or semi-horizontal arrangement of superscript and root letter provide important, if somewhat imprecise, evidence for pre-15th-century sources (see the table in Scherrer-Schaub, 1999, 25; see also Steinkellner, 1994, 124–125). The vertical double *tsheg* (Tibetan syllable delimiter) is frequently encountered in the earliest inscriptions (8th to the early 9th cents.) and later gradually fell out of use (see Richardson, 1985, 3, 28, 45; see also Dotson, 2007, 19). The paleographic peculiarities of the 8th-century stele inscriptions in Zhol and Bsam yas, both in central Tibet, have been described in detail in H. Uebach (2010), but it is unclear if these characteristics are primarily due to the idiosyncratic preferences of the respective stonecutters or if they can be used as chronological markers.

Post-15th-century documents can be even more difficult to date, and while Carbon-14 testing is sometimes possible for manuscripts, no such tests have been done on epigraphs yet. In principle, this is also possible for inscriptions of the surface type (see above) as the ink or paint contains organic matter, but in order to obtain a sufficiently large sampling, a considerable part of the respective inscription would have to be destroyed.

The difficulties in dating Tibetan sources merely on the basis of their orthographic and paleographic characteristics are compounded by the fact that one always has to account for the possibility of what E. Steinkellner (1994, 124) has called "archaizing mannerisms"; such attempts to artificially make new textual documents appear old by using antiquated scripts, orthography, grammar, and so forth are a phenomenon that one meets particularly often with inscriptions, not only in Tibet. In addition, up to the present time, the *gi gu log* is sometimes used instead of a regular *gi gu* in order to avoid the graphic interference of the vowel sign with a character of the line above (see fig. 7), and it is not always possible to decide if the *gi gu log* was merely used for this reason or whether it reflects ancient writing habits.

Another problem in dating Tibetan epigraphs is that inscriptions both of the cut and of the surface type were sometimes touched up, replaced by a new exemplar, or overwritten in the form of a palimpsest (see Tropper & Scherrer-Schaub, 2014; see also Uebach, 2010, 414–415). Those cases in which the overwriting or renewing of the inscriptions is obvious (see figs. 8 & 9) naturally raise some suspicions as to whether there are also less obvious cases that have gone unnoticed so far. As a corollary, such tampering also constitutes a serious problem in regard to the appraisal of the contents of epigraphic sources. For it is well known that copyists of manuscripts in codex form not only introduced accidental mistakes but also sometimes altered the original text on purpose. These tendencies must certainly have been compounded if a severely damaged inscription was touched up or entirely renewed. Therefore, neither can one take it for granted that a given Tibetan inscription is original, nor should one take its contents at face value.

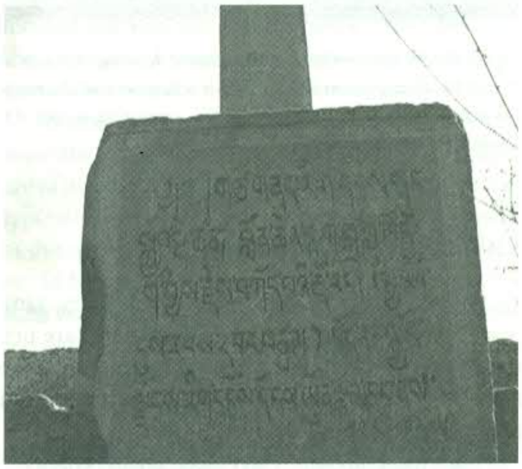

Fig. 7: 20th-century inscription next to the Zhol *rdo ring* in Lhasa with *gi gu log* in the syllable *gi* at the beginning of line 3. The short text reads as follows: "Unit for the protection of important cultural relics. *Rdo ring* displaying the achievements of the great minister Stag sgra Klu khong. (Erected in the 8th cent. CE.) Administrative Committee for Cultural Relics in the Tibetan Autonomous Region – 1981-08-5" (photo by author).

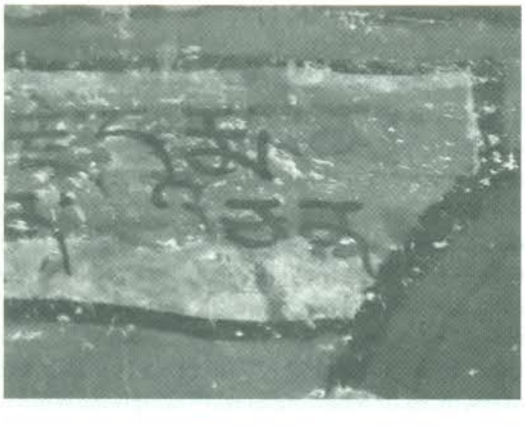

Fig. 8: Right side of a caption identifying a painted image of Chos rje Darma mtshan can in the Rgya 'phags pa lha khang of Nako (Kinnaur, Himachal Pradesh). The black text was written over an earlier version in red, of which parts can still be made out (photo by author).

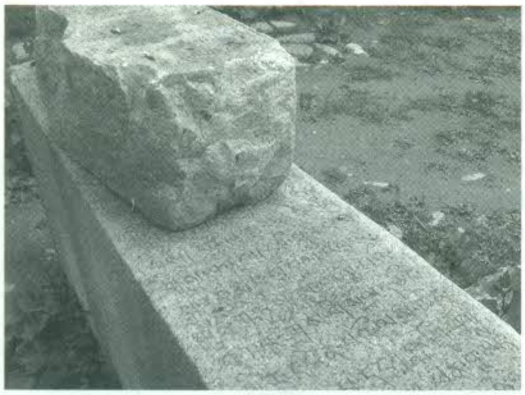

Fig. 9: Recent replacement of the eastern *rdo ring* in front of Zhwa'i lha khang (central Tibet), with a fragment of the original (dated to 812 CE by Richardson, 1985, 44) resting on top of it (photo by Kurtis Schaeffer).

Functions of Inscriptions

As pointed out by C. Scherrer-Schaub (2013, 140), inscriptions in Tibet as well as elsewhere "are primarily destined to inform the public and/or to 'make something known to everybody'... particularly if emanating from political authorities."

This is most obvious with edicts (*gtsigs*) engraved on *rdo rings* (steles; see e.g. Richardson, 1985, 16–25, 26–31, 46–54). C. Scherrer-Schaub (2013, 140) also emphasizes that stone, due to its durability, is an exceptionally suitable support for such inscriptions and draws attention to the fact that this is already alluded to in a passage of the edict found on the western *rdo ring* at Zhwa'i lha khang (edition of Richardson, 1985, 48, lines 26–31). Specifically, the passage states that the edict was meant to still be binding on future generations, and it indicates that, being carved in stone, the text cannot easily be shortened, altered, or modified. Not all of these official secular documents have a Buddhist context, however, and the same is true for inscriptions commemorating a historical event.

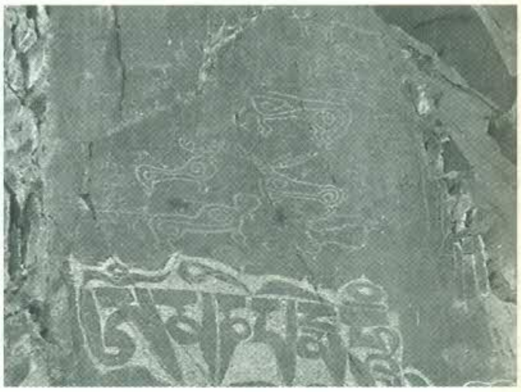

Fig. 10: Pre-Buddhist rock carvings, partly covered by the mantra *oṃ maṇi padme hūṃ* (Ri mo thang, Ru thog, western Tibet; photo by author).

Similarly, a variant of the inscriptions' function of "making something known to everybody," namely that of marking space, may have a purely political bearing, but it may also extend to the religious domain. Just as an inscription proclaiming an edict shows the sphere of influence of the issuing authority, the countless rocks and stones inscribed with *oṃ maṇi padme hūṃ* (with many variant spellings) that are found all over the Tibetan cultural realm mark the respective areas as Buddhist territory. This becomes particularly clear in those cases where the mantra and pre-Buddhist petroglyphs are found together, the former sometimes even partly obliterating the latter (see fig. 10; see also the pictures in Bellezza, 2002, 231, 251). Closely related to this function of marking space, such inscriptions thus usually also bear testimony to the attempt to subdue local spirits or non-Buddhist beliefs, especially those of the Bön religion (see also Bellezza, 2008, 188–189).

The short captions found below painted images are mainly a means to identify the respective figures or themes, and to a certain extent, this also applies to most of the longer epigraphs that are combined with painted scenes. In addition, a number of other purposes have been ascribed to these more extensive inscriptions, particularly to the ones that consist of literal quotations from Kanjur or Tanjur texts. Thus E. Steinkellner (1995, 22–23; 1999) argues that

5, 22–23; 1999) argues that

Tabo's *Gaṇḍavyūhasūtra* inscriptions – dated to the 11th century and so called because they consist of excerpts from the *Gaṇḍavyūhasūtra* – were primarily intended to "prove as a document of revelatory scripture that what is depicted in the painting is truly authentic Buddhist teaching" (Steinkellner, 1995, 23), or, put in other words, that they were added to the painted scenes "for the purpose of authorization" (Steinkellner, 1995, 23). His explanation is offered against the background that Buddhism was not firmly established in the area around Tabo in the 11th century and that some offensive tantric practices had spread there. Yet, considering that most people were illiterate at that time, this "authorization" of the paintings and their contents through the inscriptions only could have worked indirectly on the general population, either via the medium of a learned monk or through the mere effect that the written word can have on illiterate people.

Another function ascribed to religious inscriptions, be they long or short, with or without appended images, is that of serving as an object of veneration (Tropper, 2005, 39–44). This can be seen as a variant of the veneration bestowed on Buddhist manuscripts in codex form that has come to be known by the expression "the cult of the book" and has been identified as an important element in the development of Mahāyāna Buddhism (see e.g. Schopen, 1975; Kinnard, 2001, 148–175). Up to the present, paying homage to texts as physical objects that represent the teachings of the Buddha, and thus ultimately the Buddha himself, has remained a prevalent feature of Tibetan Buddhist practice. It is performed in particular by the lay population, and it can be observed not only with paper manuscripts, block prints, and modern books but also with inscriptions. Thus the visitors to monasteries often perform prostrations and pay other forms of physical obeisance to the texts stacked in the shelves, and for inscriptions similar performances are most notably carried out in front of the so-called *maṇi* walls. These structures are omnipresent in the Tibetan Buddhist world, come in various forms (masoned or merely piled up, cuboidal, or more rounded), and are typically about one meter high and up to five meters wide, while their length varies considerably, sometimes extending to several hundred meters. More often than not, only the rocks or stone slabs placed on top are inscribed, and usually these inscriptions consist of short mantras like *oṃ āḥ hūṃ* or *oṃ maṇi padme hūṃ* (hence the term "*maṇi* wall"). In quite a few cases, primarily in western Tibet, these structures also feature the text of an entire *sūtra*, which is distributed over several stone slabs (see fig. 11).

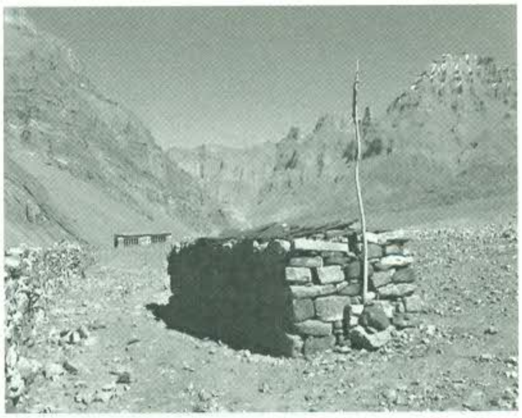

Fig. 11: *Maṇi* wall near Mud (Spiti Valley, Himachal Pradesh), with text of the *Vajracchedikāsūtra* (Tib. *Rdo rje gcod pa'i mdo*) cut into the stone slabs placed on top (photo by author).

In Ngari (TAR) as well as in the culturally Tibetan areas of northern India, there is still a widespread custom of having professional stonecutters prepare such inscriptions for *maṇi* walls after the death of a family member in order to gather merit and to thus contribute to his or her favorable rebirth. Similarly, the erection of a *maṇi* wall is sometimes sponsored to improve one's own karma, but this is never done with an exclusive view toward one's own rebirth but with the intent to benefit all other living beings, too. The texts that are mainly chosen for this purpose are the *Sukhāvatīvyūhasūtra* and the *Vajracchedikāsūtra*, and occasionally the circumstances under which such *maṇi* walls came to be constructed are narrated in an inscription on a separate stone slab. These usually short epigraphs are of interest from a historical point of view, as they typically provide the name of the deceased person, of the sponsor, and sometimes also of the stonecutter. In Ngari, the latter are mostly itinerant, practice their craft in the open or in a tent, and have a certain repertoire of texts of various lengths from which their customers can choose according to their financial abilities (see fig. 12).

The aspect of creating merit for the favorable rebirth of a deceased relative is also found in the production of *tsha tsha*s that are either inscribed with particular formulas or into which such formulas were enclosed. As pointed out by K. Namgyal Lama (2013, 27–29), the *mūlavidyā* (root formula) of the *Sarvadurgatipariśodhana* (see Skorupski, 1983, 7, 126, 127), Akṣobhya's *dhāraṇī* "*namo ratnatrayāya,*

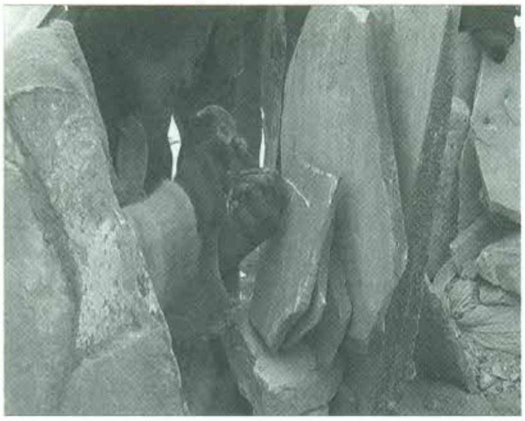

Fig. 12: Professional stonecutter at work in his tent near Bar yangs (Ngari) in 2009. He is preparing a short mantra, which will be distributed over several stone slabs (photo by author).

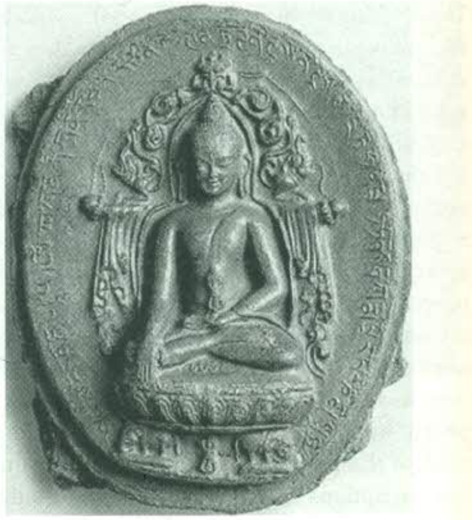

Fig. 13: *Tsha tsha* of unbaked clay from 'Phyong rgyas (central Tibet) showing the image of Akṣobhya encircled by his *dhāraṇī* (after Liu, 2000, 88).

oṃ kaṃkani kaṃkani…" (see fig. 13), and the *yig brgya* (hundred-syllable mantra) of Vajrasattva are considered to be especially appropriate for that purpose.

Moreover, K. Namgyal Lama (2013, 27–29) discusses a number of other functions of inscriptions on *tsha tsha*s, including consecration, protection, and invocation, which may also be found with inscriptions on other supports. Thus consecratory inscriptions are particularly common on the backside of *thangka*s (for examples, see Heller, 1999, 220; Kossak *et al.*, 1998, 138), and the protective element is sometimes also noticeable with inscribed stone slabs, in particular when they are placed at the entrance of a village or around the perimeter of a temple and thus create a barrier that wards off all evil influence. Captions may merely provide the name of a painted figure but often end in a short phrase like "*la phyag 'tshal lo*" (homage to) or "*la na mo*" (reverential salutation to), thereby not only identifying the respective image but also expressing veneration for the depicted personage or deity and invoking his or her presence, assistance, and protection (see also fig. 4).

As these last examples illustrate, most Tibetan inscriptions can fulfill several functions and monocausal explanations for their existence thus usually fall short of the mark. Determining the exact ratio of these functions in a given inscription is rarely possible, however, especially in view of the fact that various parties are involved in its production and reception, and to each one, a different aspect may be of paramount importance.

Volume 29-1

It has been evident for many years that no authoritative, reliable, and up-to-date reference work on Buddhism yet exists in any language. *Brill's Encyclopedia of Buddhism* (*BEB*) aims to fill that gap with a comprehensive work, presented in two phases: a series of six volumes including an index volume, addressing issues of global and regional importance, to be followed by an ever-expanding online resource providing access both to synthetic and comprehensive treatments and to more individuated details on persons, places, texts, doctrinal matters, and so on.

Illustrated with maps and photographs, and supplemented with extensive online resources, the print portion of the thematic encyclopedia will present the latest research on the main aspects of the Buddhist traditions in original essays written by the world's foremost scholars. *BEB* aims at a balanced and even-handed view of Buddhist traditions, presenting the most reliable accounts of well-known issues and filling gaps in heretofore-neglected areas. In doing so, it emphasizes that Buddhism is simultaneously constituted by a plurality of regional traditions and a far-reaching phenomenon spanning almost all of Asia, and more recently far beyond as well.

Volume I surveys Buddhist literatures, scriptural and nonscriptural, and offers discussions of the languages of Buddhist traditions and the physical bases (manuscripts, epigraphy, etc.) available for the study of Buddhist literatures. Subsequent volumes will address issues of personages, communities, history, life and practice, doctrine, and space and time.

JONATHAN SILK is professor in the study of Buddhism at Leiden University. His research centers on the scriptural literature of Indian Buddhism, with particular attention to Mahāyāna *sūtras* and their translations into Chinese and Tibetan. His major publications include *Buddhist Cosmic Unity* (2015), *Riven by Lust: Incest and Schism in Indian Buddhist Legend and Historiography* (2008), and *Managing Monks: Administrators and Administrative Roles in Indian Buddhist Monasticism* (2008), as well as numerous articles. Among other roles, he is editor-in-chief of the *Indo-Iranian Journal*.

VINCENT ELTSCHINGER has been a research fellow at the Austrian Academy of Sciences since 2003. His research focuses on the genealogy and the religious background of late Indian Buddhist philosophy. Among his numerous publications, mention can be made of *Buddhist Epistemology as Apologetics* (Vienna, 2014) and a series of articles dedicated to the sources and polemical targets of Aśvaghoṣa.

OSKAR VON HINÜBER is professor emeritus at the Albert-Ludwigs University of Freiburg and ordinary member of the Akademie der Wissenschaften und der Literatur, Mainz, foreign ordinary member (Associé étranger) of the Académie des Inscriptions et Belles-Lettres, Paris, and corresponding member of the Österreichische Akademie der Wissenschaften, Vienna. He has mainly published in the fields of ancient Indian cultural history, historical grammar and literature of Middle Indo-Aryan languages, the Buddhist manuscript tradition, and epigraphy.
